Thread: [Finding the Best AI Workflow for Maximum Productivity](#)

Remakee ID - October 9, 2026, 10:51 am

I've been exploring different AI workflows to find the most efficient and effective way to use AI for everyday tasks, development, problem-solving, and productivity.

With so many AI models, tools, and agents available today, I believe the key isn't just about using the most powerful model, but understanding how to combine different tools and approaches to achieve better results.

My main goal is to build a workflow that balances speed, accuracy, cost, and consistency while minimizing unnecessary complexity.

I'm particularly interested in improving how AI handles complex tasks, maintains context across multiple interactions, follows instructions accurately, and produces reliable results without requiring constant manual intervention.

I also believe that having a structured workflow can make a significant difference. Instead of relying on random prompts, a better approach involves proper planning, breaking down complex tasks into smaller steps, selecting the right models, and reviewing outputs before moving forward.

Another important aspect is understanding when to use a single powerful model and when multiple specialized models or AI agents might provide better results.

Ultimately, I'm working toward a workflow where AI becomes more than just a chatbot. The goal is to create a reliable system that can assist with planning, research, coding, automation, and execution while maintaining high-quality results.

I believe finding the right AI workflow is an ongoing process of experimentation, optimization, and continuous improvement. As AI technology continues to evolve, adapting the way we use these tools will be just as important as the capabilities of the models themselves.

For me, the best AI workflow isn't necessarily the most complicated one. It's the one that consistently delivers great results with the least amount of time, effort, and resources.

Im trying to jailbreak my AI for cheating purposes but i cant find anything i need.
