Looking for SIP trunk for USA which allows custom caller IDs.

I'm running a huge telegram channel where I offer this for some regions already, and I cannot seem to find a good route for USA.

I was told that some people have a method which consist of creating a bandwidth business account, which allow to send custom caller id to USA numbers, but I dont know who I can pay to get that account up.

The only routes I find for USA, often don't reach alot of numbers. I had a somewhat good one in January, but the guy that was selling to me was some Nigerian guy who kept scamming me, so it made no sense for me to keep working with that person at some point.

But yeah, if anyone knows a supplier or want to partner for the USA side, let me know. Because I already have the reach to the customers that needs it, so as soon as we have such route, we would be making minimum 10k+ usd in the first month.
