Thread: [What to do with ChatGPT Daybreak Blue ?](#)

Bastille - October 12, 2026, 10:28 pm

AI Quote:

Daybreak Blue is an OpenAI initiative designed for cybersecurity professionals and researchers, providing AI capabilities with tailored guardrails for legitimate defensive security work. It aims to support tasks such as malware analysis, threat hunting, vulnerability research, incident response, and security investigations, while maintaining safeguards against malicious use.

Since I'm on HF I've always been into cyber security stuff, and when ChatGPT came out I've always been into the same thing. So after few years I've received a "Daybreak Blue" accreditation, which allows me to go into things such as :

- log analysis
- malware analysis
- vulnerability code
- reverse engineering

Next step would be running audits with Codex on my homelab, anybody here having a Daybreak blue access and have some ideas to share ?

BigDapx2 - October 13, 2026, 10:38 am

Honestly this is the first time i ever heard about this, sorry cant help, but it sounds cool as heck

Yeah it's definitively cool, as I've been always been on the good side of hacking the rail guards are tailored, I can even ask how black hat stuff work and ChatGPT will reply.

rodrigayz - October 13, 2026, 3:32 pm

daybreak blue can be obtained by anyone , you dont need to be into the cyber security field at all, its just kyc + having hardware wallet as auth(yubikey, enforced since 1th october)

and tbh, they pretty much nerfed the lower refusals from daybreak blue now.

what would be special to test it with, is daybreak red if you had it, or the red version of anthropic which is also available to governements/special organizations .

Oh, I didn't know anyone could have it, I thought it was based on how you used ChatGPT for a while. I saw Daybreak Red but it seems to be available only for few people, you can apply but it's way more difficult to get it

EDIT : just check on their website
