Thread: [Professional Android APK Modding & Reverse Engineering | Apktool & Smali](#)

jatopo - October 14, 2026, 12:36 pm

Looking for a Reliable Android APK Modification Expert?

Legitimate, Clean, and High-Quality Reverse Engineering Services

Hello HackForums community,

I am jatopo, and I am offering professional, fully compliant Android APK Modding and Reverse Engineering services. If you need to adapt, optimize, update, or legally modify an Android application, I am here to help.

What I Can Do For You:

- **Decompilation & Recompilation:** Working with Apktool, Smali, and Jadx to analyze and modify apps.
- **App Customization & Localized Translation:** Adding new languages, changing assets, or modifying UI elements.
- **Feature Optimization & Fixes:** Debugging, adapting layouts for different screen resolutions, and performance tuning.
- **Smali Code Adjustments:** Precise and clean modifications at the bytecode level.

Case Studies & Portfolio:

- **Target Application:** Hill Climb Racing
- **Objective:** Completely eliminate forced ads (interstitials and banners) while keeping the game stable and compliant.
- **Methodology:** Decompiled the application using Apktool. Analyzed the AndroidManifest.xml and located the integrated ad SDK dependencies. Patched the Smali code to bypass ad-trigger hooks and nullified the mandatory ad-call methods, ensuring zero background resource drain.
- **Result:** 100% ad-free gameplay, faster scene loading, and optimized battery consumption. Fully functional offline and online without crashes.

You can view my portfolio and past work directly on LaborX by searching for my username: jatopo
Secure Payments via LaborX:

To ensure mutual trust, full transparency, and escrow protection, I accept orders exclusively through the LaborX platform. You can hire me there under the same username (jatopo).

How to order?

1. Send me a PM (Private Message) here on HF with your project details, and I will share the direct link to my LaborX gig.
2. We will discuss the requirements and technical possibilities.
3. We will open a milestone/contract on LaborX to begin the work safely.

Note: I do not provide malicious modding, malware injection, or any illegal services. Clean and legitimate engineering only.
