Thread: [\[TESTERS WANTED\] Telegram advertising tool for groups \(Windows\)](#)

vergoide - October 18, 2026, 2:51 pm

Hi everyone! I just came to find out if this kind of tool gets any interest

I'm looking for beta testers for my Telegram bot, a Windows program that automates posting your ads in Telegram groups and gives you tools to find better groups and manage everything from one panel.

I don't care if you have a new or old account, I just want real feedback from people. I just need to chat on discord to know how the features are working and you will have support from me all the time I can.

I just need you to report bugs and anything that feels confusing

Some features the bot has:

Automatic posting: Post to all your groups automatically, with multiple Telegram accounts at once.

Group management: Join groups in bulk with adjustable speed

Group finder: Built-in group search engine, much better than Telegram's own search and search text in all the groups you're already in.

Inbox and auto-replies

Stats

Control panel accessible from your phone

If someone wants to have free access just answer to this thread or PM me

Thanks!
