VOID DRAINER - The Best MetaMask Bypasses (80/20)

We recommend reading everything to get an idea of who we are and what we do.

Functionality: Support for 500+ wallets

Support for all High-tier EVM networks (30+)

Support for a large number of DeFi, Protocols 1000+ (Uniswap V3, Aerodrome, AAVE, Compound etc)

The best bypasses on the market for MetaMask (more info below)

NFT support across 20+ networks, smart pricing based on relevance you won't end up with junk NFTs you can't sell

A fast wallet parser that takes no more than a couple of seconds

Protection against domain flags when connecting in MetaMask (even if your domain has flag, the user will not get any red warnings)

Bypass for hidden draining native coins (ETH, BNB, and others), token Approve - on all networks supported by the drainer

Instant profit split to your wallet

Auto-withdrawal of a previously approved token upon deposit/top-up

Domain flag checking and automatic notification

Automatic sending of the fee to the user to make a transaction if they do not have enough funds for it (Gas sponsorship)

A simple and clean log design, not overloaded with useless information.

Why us?

We ourselves use our own product and have been polishing it for a long time so that it is comfortable for us to work - and, consequently, for everyone who will work with us going forward.

In our team, every task has its own person who is a master of their craft.

Increased stability: we optimized the code of our drainer hosted on your website, which means it will work reliably and quickly on any device and under any conditions.

We don't shout that we are first or best on the market; our goal is to earn that title through our

actions.

We do everything to multiply your and our conversion.

We have a well-tuned server infrastructure, and you won't see outages caused by us or by our hosting providers.

We listen to users' wishes; if you have a remark or suggestion, we will implement it.

Our bypasses and access conditions for them

- Level 1 (available to everyone at launch)

No bypass for draining of the native coin; yellow warning banners during approve/permit signatures

- Level 2 (from \$1000 profit or by agreement with us)

Bypass for hidden draining of the native coin on any network; clean approve and permit signatures (red/yellow warnings)

- Level 3 (from \$5000 or by agreement with us)

Bypass for hidden draining of the native coin on any network

Bypass for hidden draining of any ERC20, Protocols, Positions, DeFi

- Level 4 (by agreement with us)

There will be no description; just know that it surpasses everything you have seen or known

Roadmap

Addition of website hosting functionality with us, including domain purchase and unique anti-bot solutions

Search for the best bypass solutions for other mainstream wallets (Trust, OKX, and others)

Smart Pre-Approve of tokens for users whose wallet is currently empty; tokens for approval will be offered based on token activity and their top-ups/deposits

More flexible configuration of drainer behavior

Full customization of Wallet Modal and popup status

Try working with us, and you will experience the best experience and conversion in this field.

Terms of work: 20% to us, 80% to you
