Thread: [Share your OpSec setup - I will go with mine](#)

Infinity. - October 22, 2026, 3:20 pm

Qubes OS workstation -> Isolated work, personal, and browsing qubes -> VPN enabled router ->> ((WireGuard tunnel + kill switch)) --> Private VPN server (VPS) --> Encrypted tunnel terminates here --> Optional SOCKS5 proxy ---> Application-specific traffic only --> Internet

am i hacker yet?

Raijin - October 23, 2026, 7:43 am

That seems very well planned and executed. I am just using a single VPN.

Bastille - October 23, 2026, 10:09 am

I'm not using advanced SecOps setup, I can use both Windows and Fedora, depending on things I want to do. Both are protected (Bitlocker and LUKS Encryption).

I'm not into malicious activities so I don't need to hide illegal stuff, I'm not worried about FEDs, however if someone break into my apartment and steal my computers and servers I would be pissed-off, so at least I protect the content and encrypt everything, so even if they get the material they don't get the data inside

Chill guys, I myself dont follow this regularly, I once did this as an experiement just to try it out but the bandwidth was upsetting tbh.
