

Forum: [Hack Forums](#)

Thread: [.JPG exploit](#)

rifts1103 - April 3, 2009, 5:51 pm

I read this post and it made me curious about how to do this?

does anyone have any idea?

Quote:..JPG EXPLOITS

Please note, it's been discovered that some seemingly innocent links that link directly to a .jpg file contain embedded <IFRAME> coding. In lay-man's terms this means that it's actually a web site inside an image file, one that attempts to install a key logger onto your machine. If you ever click an image file and something different than what you were expecting pops up, odds are it contained a key logger.

binders or something??

idkk lol

rifts1103 - April 3, 2009, 6:14 pm

i think is obviously has something to do with iframe

does anyone have an idea

Don't post random shit then.

It's stenography of types.

That is similar to it, I have another link somewhere about something basically exactly like your initial report.

Hope this helps. I'll look for the other link.

rifts1103 - April 3, 2009, 6:20 pm

thanks ill check that link out and thanks for looking for the other link this seems like it could have some potential?

silent jpg exploits dous not exists...if yes send me one and infect me ?

jstar - May 18, 2020, 10:41 am

Not sure but one guy did tried selling me silent jpeg exploit.

this is his jabber shellbuster@xmpp.jp

I didn't bought from him as it was out of my budget and i don't even know how legit this was.
