Thread: [Web Application Resource - OWASP](#)

I Learning I - August 25, 2010, 5:06 pm

For those that have the greed for knowledge and actually want to take their steps into hacking and learning how everything works, what kind of bugs are there, how to use them, why they work, for those that want to become either hackers, crackers or coders of success, I'm about to present a great source of knowledge!

You can check Wikipedia for the information they present relative to it

Code <http://en.wikipedia.org/wiki/OWASP>

And the actual website

Code http://www.owasp.org/index.php/Main_Page

Most of the old school or experienced in this forum or in "the scene" should have heard about it, but for those starting that really want to know try it.

However those that are starting and are always on Google for "SQLi XSS and *", or making posts asking, "what's next? " now you have a great resource.

They have:Tools for penetration testing

Vulnerability Simulator(You try to exploit your own machine with a vulnerability)

Top vulnerabilities

Top testing tools

Documentation

Links to other resources.

That website has a LOT of information relative to Web Application, if you're interested just go there.
:)
