Thread: [have the replication of a website with u r title\(without ripping\)](#)

ashrith - April 7, 2009, 5:51 am

original Source: <http://hackersource.info>

By:ashrith&beyond

Stuff needed:

1-->web page maker([downlod link](#))

2-->basic html knoledge

3-->u r brain

How does it work?

it works by using an html tag called <iframe>

Starting Off

1-->once u download webpage maker go to insert-->iframe

2-->enter the url of the webpage that u want

4-->scroll bars-->no

5-->iframe borders -->no

6-->expand the size of the iframe to the size of the webpage or site

7-->go to insert-->shape-->rectangle

8-->cover the title of the website with the shape(cover the title of iframe so that u can put yours)

9-->put the iframe in the center so that u can put your ads

10-->press f5 to preview and see that the shape covers the title properly

11-->go to file-->export to html-->select the folder to export

12-->Upload the webpage to ur ftp and DONE!!

Note:u could also enter the ip of the website insted of url in iframe

Thanks man u r idea rox!!.. and the demo site

lump021 - April 7, 2009, 7:10 am

Ty for this I will test now.

GEEHACK - April 7, 2009, 10:12 am

good idea i will try it

ashrith - April 7, 2009, 11:33 pm

The Demo Site: <http://hackersource.info/demo>

Mr Beanz - April 7, 2009, 11:47 pm

Damn nice, gonna try this out soon <3

ashrith - April 9, 2009, 10:57 pm

You Can also use the <frame> tag insted of iframe

MilkyMilo - *April 9, 2009, 11:19 pm*

Wow! Nice post! I'll give it a try. Nice info for sharing.

ashrith - *April 11, 2009, 8:55 am*

ma pleasure.there are many other tricks like iframe in <http://hackersource.info>
