About :

The Universal is its own universe of a Stealer, It truly is my best work of art i gave it many custom features from GUI to smooth fully compatible application both Stealer / Keylogger side aswell as the builder.

Steals Details for :

Local Network

Product Keys (CD Keys)

http/https/outlook passwords (Internet and Secured login's + Emails Accounts & Passwords)

All Local PC Information

Steam

MSN

Firefox

Internet Explorer 7

Internet Explorer 8

FlashFXP

IMVU

DynDNS

NO-IP

Pidgin

Trillian

Google (Keylogs it)

Paypal (Keylogs it)

Yahoo (Keylogs it)

Other Programs / Logins via Installed applications or in a Browser (Keylogs it)

Pretty much any login / application or web browser window it will keylog all typed in / entered details / info. this is why it is able to accomplish so much.

Stealer Settings :

Set process priority levels

Rename itself in Taskmanger

Fake Error

BSOD (Blue Screen Of Death)

Encrypt your account details so nobody decompiles the app and steals your account.

Downloader

Clone File info

Send data via FTP and Email

Builder GUI / Features :

Minimize to tray

Smooth application Skin and Transparency

Play Music

PS. This tool is one of my older bits of work so its no longer FUD but nothing im sure a Crypter cant fix, also any hate comments shove them up your arse as far as im concerned, because the trolls and haters on this forum you all have the IQ of stone.
