Now particularly for KIS 2011, how long Is the subscription period for mate?

Also, It's against the rules to ask for reputation.

Thanks.

I think that all members of hackforum would have liked if you had not put the password, rather than send them to a site like <http://fileups.net/1F98575> and commodify everything. I hope not to have you offended, and to all members who wish to have the keys Kaspersky updated, let me give a site where can easily find each day: <http://www.hack-home.net/>
