Thread: [Bot/Trojan Spreading Guide.](#)

remoladen - April 11, 2009, 9:47 am

In this tutorial/guide, I am going to tell you ways to spread your bot/trojan.

1. Torrents

This is pretty easy, and pretty successful.

First you need a torrent client, I use uTorrent, because it's the easiest.

Once you get your torrent client, make a folder full of .zip files with names of popular programs (e.g. Kaspersky 2009 Crack.zip) and put your bot/trojan inside.

Now you need to create the torrents.

Open uTorrent (or your other torrent client), and click File|Create New Torrent... Then add one of your fake programs (The Kaspersky 2009 Crack.zip or what ever).

Now you need to add trackers.

Here are some good trackers you can use:

Code `http://open.tracker.#.org/announce`

`http://www.torrent-downloads.to:2710/announce`

`http://denis.stalker.h3q.com:6969/announce`

`udp://denis.stalker.h3q.com:6969/announce`

`http://www.sumotracker.com/announce`

Don't check private, but do check start seeding.

Now click Create and save as..

Once you save, go to #.org, and register, and click upload torrent.

Do this too all of your fake cracks or programs.

You can also get programs or stuff that people might want, and just bind your bot/trojan to it then create the torrent that way (takes longer, but more people might download it).

2. Crack Request forums

This way is pretty easy and is pretty effective.

First get hosting that allows custom 404 pages (I suggest getting a .info domain from godaddy (only \$0.99), because you can upload viruses, and have custom error 404 pages.

Once you get this, upload your bot/trojan to you hosting (e.g. "www.freefileupload247.info/files/bot.exe"), then make the custom 404 page

"www.freefileupload247.info/files/bot.exe" (or what ever you uploaded you bot/trojan as).

Then no matter what url someone goes to on your site, it will download your bot/trojan (like "www.freefileupload247.info/files/34736745/asdfasd.exe" or "www.freefileupload247.info/a.exe" or even better "www.freefileupload247.info/files/2765345/Kaspersky.2009.Crack.exe")

Then find a software cracking forum that has a subform for "Crack Requests". Then you click on a whole bunch of the requests and reply to all of them with something like this:

I found the keygen for it:

"http://www.freefileupload247.info/files/234572/Nero.9.Keygen.exe"

That is a good way of doing it.

3. Chatrooms

Here is another good way.

Go on some chatroom somewhere and put your name as something like Jenna247. Then PM a bunch of guys with something like this:

Heyy my name is Jenna asl?

You want to see a picture of me?

"http://www.freefileupload247.com/pictures/2047529/Me_at_sleepover.pif"

I don't know if you can open it, I'm on a mac.

If you rename a .exe file to a .pif, it will run just as the .exe does, so with your custom 404, if they go to your server /anything.pif, it will download your bot/trojan) And a .pif file looks like it could be a picture >:D

You could do this to a bunch of people at once, or make your bot do it.

4. Email

Not that easy, but could be good.

Make your bot/trojan get a list of all the zombie's (infected computer) contacts, and have it send out an email from a random email address (such as SmithJenna247@yahoo.com) with something like this:

Hey it's Jenna, I don't think you remember me, but we met a while ago.

Here is a picture of us: "http://www.freefileuploads247.com/pictures/342772/2008_36327.pif"

Then if someone from their contacts downloads it, it will send to to all their contacts and so on.

I hope this tutorial/guide helped you, if you have anything to add, please do so.

lilspanyol - April 11, 2009, 10:40 am

Pretty good , basic guide but I don't see why this is "official"

remoladen - April 13, 2009, 1:30 pm

Bump

Kain - April 15, 2009, 8:04 am

Nice one, pretty simple. Thanks a lot.

gekkehenk - April 15, 2009, 8:08 am

i dont get the seeding part on the torrents,
but overall good guide

Kain - April 15, 2009, 8:16 am

It's simple, you make a .rar with cool name. Either porn or crack or keygen etc...
Then submit the torrent on big torrents website. Then seed it, people will surely download it.

exchange.gold - April 15, 2009, 8:39 am

Nice one, pretty simple. Thanks a lot.

king.selling - April 15, 2009, 9:31 am

GOOD, THANKS MAN !!!

Lord_Sinister - April 15, 2009, 10:15 am

The idea is to actually crack something useful and add your bot too it. I.E. Crack fallout three so it's fully functional and bind your bot to it. If your bot is FUD then people will not only download this, they will seed it. Now you have a never ending supply of fresh bots. Don't be a dunce and label a folder Super Mega Ultra Huge Porn Collection and then have one file in the folder named rodneysbotnet.exe. That's not very intelligent.

Another method that I like to employ is to burn a bunch of cd's with your bot on it. First you write an autorun file to autorun a batch script. Write a batch script that runs in silent mode. See megas post in one of my threads to learn how to do this. The batch should run in silent mode and add your bot to the startup folder. The main idea is to label the disc something like porn, or anything else that may peak someones interest. Now the most important thing here is that your batch file plays a small porn movie (if that's what you labeled the disc as) as that will not raise any alarms as to what just occurred. That also raises the chances that this disc will be passed on to friends, copied and sold, etc. This is also extremely effective with flash drives. If you go the flash drive route, just remember that it must have U3 technology to use autorun.

remoladen - April 16, 2009, 8:30 pm

No problem guys, and thanks Lord_Sinister, nice one.

NB77 - April 18, 2009, 12:08 pm

wow if spreading a torjan is that easy. there will be a big mess!
you also need to do a lot of stuff
such as to make your torjan [or botnet] undetectable by AVs
and many others to consider.

ne0nrouter - May 20, 2009, 12:56 am

It'd still be illegal. It'd be fraud... you are INTENTIONALLY trying to deceive them. If, however, you put it in with the intention of them reading it, it'd be legal. Now, even if you were to put it in and you were not committing fraud by intentionally deceiving them, you better believe the court will fight that you were. Law is very tricky, it has a lot to do with your intent.

iBH DeRaJ - May 20, 2009, 3:13 am

ok so you can put your bot on a disk? kinda like putting it on a usb stick?

Obergauleiter G - May 20, 2009, 3:19 am

Most is copied. The torrent guide is copied.

iBH DeRaJ - May 20, 2009, 3:21 am

what u mean most is copied?

Nytrix - May 21, 2009, 6:02 am

Nice guide mate

[msg too short]

Jettboi93 - May 22, 2009, 9:34 am

Thanks for this nice and easy tut!

BumpPppPpppPpp XD

mr-blizz - June 1, 2009, 5:23 am

what i do is i make a worm and bind my bots with it. its simple and it will spread to all computers on a network. if you go and execute your worm on your own computer and your connected to a heavily used LAN you'll get a lot of zombies after remove worm from your own computer.

JEMs - June 1, 2009, 6:30 am

that is a pretty nice tut, i used limewire but your way will give you more hits. Thanks alot.

Bl?ze - November 23, 2009, 5:58 pm

This way is pretty easy and is pretty effective.

First get hosting that allows custom 404 pages (I suggest getting a .info domain from godaddy (only \$0.99), because you can upload viruses, and have custom error 404 pages.

Once you get this, upload your bot/trojan to you hosting (e.g. "www.freefileupload247.info/files/bot.exe"), then make the custom 404 page "www.freefileupload247.info/files/bot.exe" (or what ever you uploaded you bot/trojan as).

Then no matter what url someone goes to on your site, it will download your bot/trojan (like "www.freefileupload247.info/files/34736745/asdfasdg.exe" or "www.freefileupload247.info/a.exe" or even better "www.freefileupload247.info/files/2765345/Kaspersky.2009.Crack.exe")

Then find a software cracking forum that has a subform for "Crack Requests".
Then you click on a whole bunch of the requests and reply to all of them with something like this:

I found the keygen for it:

"http://www.freefileupload247.info/files/234572/Nero.9.Keygen.exe"

That is a good way of doing it.

Is this a drive by attack?

Bang - January 16, 2010, 5:58 am

deserves a bump, very good.

marklundarn - February 21, 2010, 1:24 pm

Thanks, i use the torrent thing my self, its very effective but im always geting bannad :S my rat is fud but i use fake prog's
:/

PH30NIX - February 22, 2010, 8:37 am

hehe good and easy tut =] thanks for sharing

hobbs - February 22, 2010, 11:26 am

Good Guide, thanks man.

?

tiesto07 - February 24, 2010, 4:08 am

GOOD, THANKS MAN !!!

iLL ReDBuLL - February 24, 2010, 4:58 am

Thanks but what other sites can you use besides piratebay im not a big fan of torrents

Iron m@n - June 30, 2011, 7:59 am

Awes0me =] keep it up 4 more success !

IMacphee - July 13, 2011, 5:11 pm

Hey every1 my names Jenna,

heres a picture of me gettin my gash out,

www.thisisntaBOTitsapictureofmenaked.com

Nitsua - July 13, 2011, 10:26 pm

does the .pif extension actually work?

gummyboy - July 25, 2011, 2:04 am

nice tut man, simple and easy to follow... keep it up

Exertion - July 25, 2011, 4:25 pm

Extremely helpful. Definitely will be using this guide.

NME. - November 20, 2012, 10:08 pm

any one willing to help me spread PM me, I have been on and off with this but Now I want to go ninja status with this and spreading with torrents has never been my strong as it is confusing to me but it looks like it might be the most effective in terms of mass spreading.

ShadowForge - February 21, 2013, 7:10 am

great guide but ppl in the UK like me cant use piratebay its blocked by ISP
