Ok, now i'm saving it, but it goes kinda slow. It has 43 parts. Will comment here when it will finish saving.

It's still saving the 1st part. 10 min's..

I would highly unrecommended posting public as virus makers could bypass it easally and it is the best programme!

cobija - September 7, 2010, 9:33 pm

Well, another company stole their database and used it and basically are now considered evil, so be careful.

If people released the source, most prob you would get fucked over. But if people release the source, will mbam users be safe?

cobija - September 7, 2010, 11:03 pm

It wouldnt matter, they probably would be safe. Why wouldnt they be?

Because virus creators would have the source, and study over it and would be able to bypass it easily?

pushl %ebp - September 8, 2010, 2:23 am

Can you Pm me a link please?

ariton - September 8, 2010, 3:52 am

It's a big source and it has 43 parts. I'm saving it now for the second time.

ariton - September 8, 2010, 7:47 am

Saving is complete and the project is understandable.

Well, they may be able to bypass it, but MBAM also has a database, and thats how it catches things as well. But you may be right.

Kidage - September 8, 2010, 10:58 am
