Thread: [\[Tutorial\] How to setup ISR Stealer 0.3 + Free hosting!](#)

flAmingw0rm - September 18, 2010, 3:11 am

Table of Contents:

1. Introduction
 2. About ISR Stealer 0.3
 3. Getting free hosting
 4. Creating a MySQL Database
 5. Editing the PHP files
 6. Uploading the files to your host
 7. Installing ISR Stealer 0.3
 8. Deleting "install.php"
 9. Building a server and testing if it works
 10. End
1. Introduction

Hello guys. In this tutorial I will show you how to setup ISR Stealer 0.3, which is one of the best stealer at the moment, in my opinion.

Following this tutorial, you will get a free hosting as well, which won't suspend you.

2. About ISR Stealer 0.3

Screenshot:

[http://i34.\[censored\].com/t70qrt.png](http://i34.[censored].com/t70qrt.png)

Coder : BUNNN

Made in : Romania, Europe

Gfx by : Y.xakep and TinKode

Credits: Cobein, 7, Bilal Ghouri, SqUeEzEr, Rtflol and Nirsoft team.

Beta testers : linuxgirl, zippy and wav3

Special Thanks goes to: Puscas_marin

Current Options:

Code +Send logs to my sql data base(PHP)

+Bind one file(any extension)

+Change server icon

+Pack server with upx

+Steal options:

Internet Explorer 4/5/6/7/8

Mozilla Firefox 3.x.x

Google Chrome

Opera 8/9/10

Yahoo Messenger 8/9/10 Password

Yahoo ETS

Msn Messenger

Pidgin

Windows Cd key

Filezilla
No-ip
DynDns
+Mail passwords:
Outlook Express
Microsoft Outlook 2000
Microsoft Outlook 2002/2003/2007/2010
Windows Mail
Windows Live Mail
IncrediMail
Eudora
Netscape 6.x/7.x
Mozilla Thunderbird
Yahoo! Mail
Hotmail/MSN mail
Gmail: Google Desktop and Google Talk
Download link:
Code <http://www.multiupload.com/GXFAVI7AWZ>
Password:
Code www.insecurity.ro
3. Getting free hosting

Okay, to use ISR Stealer 0.3, we need hosting, because it is a PHP stealer.

A good free hosting is www.SPAM.com , I've been using it for a few months, they didn't suspend/block me or anything.

1 - Go to www.SPAM.com and click the Free Hosting "Order Now" button.

2 - Fill the informations which are needed (use legit e-mail), because you will need to confirm later. After you filled the informations press the "Create my account" button and your account should be created.

4. Creating a MySQL Database

We need to create a MySQL Database now.

Go to www.SPAM.com, and click  [http://i54.\[censored\].com/15yemvk.jpg](http://i54.[censored].com/15yemvk.jpg)  right of your screen.

Now click on "MySQL management", it looks like this:
 [http://i51.\[censored\].com/258uy50.jpg](http://i51.[censored].com/258uy50.jpg)

Now, we have to create a new MySQL database.

 [http://i51.\[censored\].com/30c5fdk.jpg](http://i51.[censored].com/30c5fdk.jpg) 

I called the database "db" and the username "user", because it is easier for me to remember. :P

Note: The password for the MySQL user is not your password. You can use different password.

Okay, now after you done this, you should receive an information with your MySQL database details.

5. Editing the PHP files

Okay, now open the ISR Stealer 0.3 folder and there should be an archive called "PHP". Extract it and open it.

Now you will see a file "config.php", open it using notepad.

1. PHP Details

[IMG]http://i53.[censored].com/xpah6t.jpg[/IMG]

2. Admin details

[IMG]http://i55.[censored].com/2mrvbzp.jpg[/IMG]

These are the details for your SPAM account. The password is the password you use to login on the website. Not the MySQL one.

5. Uploading the files to your host

Now we have to upload our PHP files to the host.

Go back to your cPanel and click on "File Manager" which looks like this:

[IMG]http://i53.[censored].com/2wgybti.jpg[/IMG]

Now click on "public_html", because we are not allowed to upload files on the main folder (website).

There should be a "default.php" file, just tick it and delete it.

Now click "Upload" and upload the files in the "PHP" folder.

"config.php", "install.php", "index.php", "style_dark.css" and "style_light".

Now after you are done, you should see this:

[IMG]http://i56.[censored].com/2n88080.jpg[/IMG]

Find the "install.php" file and click "Open" on it.

7. Installing ISR Stealer 0.3

Now, we have to install ISR Stealer 0.3.

After you opened the "install.php", it should redirect you to this website:

[IMG]http://i52.[censored].com/w8rzoj.jpg[/IMG]

Now, click on "Install!".

You should receive this message:

Code Creating Table...Okay, Table Created...Proceeding to next step...Ok, All Done. Now You Should Delete "install.php"

That means you've done it correctly.

8. Deleting "install.php"

Now, we have to delete the "install.php" after we installed it, because it will delete the logs.

Go back to your "File Manager" and tick the "install.php" and press delete.

[IMG]http://i54.[censored].com/24fgvbd.jpg[/IMG]

9. Building a server and testing if it works

Now, after we installed it and removed the installation, we can build a server.

Go back to your "File Manager" and open the "index.php" site.

Now it should redirect you to www.yourdomain.com/index.php

Copy the URL.

Now, open the stealer and let's build a server.

Your PHP URL: Paste the URL here.

Change icon: If you want an icon for your server, choose one. (optional)

Bind file: If you want to bind a file with your server, choose one. (optional)

Steal options: Choose all, but untick the "Pack with UPX".

Now, time to test our stealer.

Press the "Test PHP" button and go to your index.

It requires a login to be able to see the logs. Use the admin details in the "config.php" to login.

[IMG]http://i53.[censored].com/2dtlpf.jpg[/IMG]

After you logged in, you should see this:

[IMG]http://i56.[censored].com/34pe4yh.jpg[/IMG]

That means the PHP works and now you can build a server.

Press "Build Server" and save it as whatever you want. Now we are DONE!

The server is tested and works fine.

10. End

All the credits for this tutorial go to me (flAmingw0rm). I have written this tutorial myself, including pictures and everything else.

Please give proper credits to me(flAmingw0rm) if you re-post this anywhere else.

A special thanks goes to BUNNN for creating this awesome stealer!

If you have any questions, just post and I will give my best to answer them.

Jordyboy - September 18, 2010, 3:13 am

Im using ISR stealer atm its brilliant.

The tutorial is even better and very well explained including picture so its a top job, i'm sure it'll help alot of people.

M4xlm - September 18, 2010, 3:15 am

Great tutorial you did there! THanks!

Braco Asshole - September 18, 2010, 3:27 am

Awesome Tutorial, I will test it now!

Thanks.

-[i]??I « - - September 18, 2010, 3:30 am

WAho. Really Kool Stealer Dude. Dosent Know About it .ThankzU .

CATMAN - September 18, 2010, 3:41 am

Awesome tutorial,FW ?

A ? ? ? ? ? - September 18, 2010, 3:46 am

Very Nice tutorial .

Thanks .

quantumbenjameen - September 18, 2010, 3:52 am

Cute tutorial.

Tho I think that SPAM might block ur site after a while.

flAmingw0rm - September 18, 2010, 3:55 am

(Sep 18, 2010 03:52 AM)quantumbenjameen Wrote: [\[CITE\]](#) Cute tutorial.

Tho I think that SPAM might block ur site after a while.

Depends how many logs you will receive.

To prevent losing logs, make sure export all your logs everyday as a backup.

ThE-iNFILTrATOr - September 18, 2010, 4:24 am

Nine Tutorial, I use j.ustfree for ISR stealer and they haven't blocked my account since 1 and a half month

Jordyboy - September 18, 2010, 4:25 am

zymic freehosting also haven't blocked mine after having an ip logger/stealer/proxy for 6 months

TechnoLogixxx - September 18, 2010, 5:07 am

i got a problem when i click on open on the installer.php i get redirected to <http://err.SPAM.com/> can any1 help me ?

flAmingw0rm - September 18, 2010, 5:20 am

(Sep 18, 2010 05:07 AM)TechnoLogixxx Wrote: [\[CITE\]](#) i got a problem when i click on open on the installer.php i get redirected to <http://err.SPAM.com/> can any1 help me ?

Open the "install.php" not "installer.php".

It must be uploaded there first.

TechnoLogixxx - September 18, 2010, 5:31 am

woops i mean install.php srry for mistype any idea how to fix it ? i did every step before the install

add my msn : darknesswilreborn@hotmail.com hf is laggy for me idk why

flAmingw0rm - September 18, 2010, 5:35 am

666 post.

How come it doesn't tell you and it is not localhost?

Contact the hosting then..

?D?vi??c?t?™ - September 18, 2010, 8:14 am

I can't open install.php it takes ages to open and when loaded it says error couldn't connect to port 21 wtf?

flAmingw0rm - September 18, 2010, 8:51 am

(Sep 18, 2010 08:14 AM)devianceth Wrote: [\[CITE\]](#) I can't open install.php it takes ages to open and when loaded it says error couldn't connect to port 21 wtf?

Because you are doing it wrong.

You are not the first one to help, most of people always do mistakes in "config.php".

abukalo1 - September 18, 2010, 11:02 am

i open up install.php after uploading and it just brings me to err.SPAM.com whats the deal?

flAmingw0rm - September 18, 2010, 11:22 am

(Sep 18, 2010 11:02 AM)abukalo1 Wrote: [\[CITE\]](#) i open up install.php after uploading and it just brings me to err.SPAM.com whats the deal?
You messed the code in "config.php".

Send me a screenshot of your "config.php" edited.

boogiebear - September 18, 2010, 12:37 pm

nice tut, isr stealer is pretty damn good, i like it a lot more than istealer b/c it grabs their windows keys too, and i ran istealer/isrstealer on the same number of bots, the same exact bots actually, and istealer got like 45 logs, isr stealer got close to 130 logs.

flAmingw0rm - September 18, 2010, 2:07 pm

(Sep 18, 2010 12:37 PM)boogiebear Wrote: [\[CITE\]](#) nice tut, isr stealer is pretty damn good, i like it a lot more than istealer b/c it grabs their windows keys too, and i ran istealer/isrstealer on the same number of bots, the same exact bots actually, and istealer got like 45 logs, isr stealer got close to 130 logs.

Yeap, I agree.

ISR is way better than iStealer. They have both freeware, that's the good thing. And both stealer don't require .NET Framework, unless you use a .NET Crypter.

D4t4HUN73R - September 18, 2010, 2:45 pm

thanks a lot for the detaild tut!

it's always great to see people are not being lazy to teach the noobs a trick or two. (yea, noob myself...)

anyways, great stuff.

flAmingw0rm - September 18, 2010, 4:13 pm

The admin details are the user and account you use to login on your website.

And btw, the username for admin is not your website, you can find it by going to your Control Panel right.

Add me on MSN, I'll help you. (It's in my signature)

ShooTIE - September 19, 2010, 12:00 pm

gj master worm and thanx for the help haha

sida21 - September 20, 2010, 2:03 am

good work men, it's working to me

THANKS a lot man,
VERY HELPFULL

flAmingw0rm - September 20, 2010, 2:21 pm

(Sep 20, 2010 01:27 PM)chief98 Wrote: [\[CITE\]](#) When i tried to build a server , AVAST and Microsoft Security Essentials caught it as a malware straight away. Is there any work around ??
Disable your Anti-Virus.

It's a stealer and most of AVs have its signature in their database. That's why it is detected. The file is safe, btw.

Chief - September 20, 2010, 2:24 pm

Is there anyway you could help me over aim, Msn r teamviewer.
I can't get it to work right?

flAmingw0rm - September 21, 2010, 5:41 am

(Sep 20, 2010 02:24 PM)ITz MainIAc Wrote: [\[CITE\]](#) Is there anyway you could help me over aim, Msn r teamviewer.

I can't get it to work right?
Sure. My MSN is in my signature.

elvinguitar - September 24, 2010, 8:24 pm

thanks for this.. but i have a problem.. every time i make an account in SPAM, my status is always "Verification in progress"

alksandr - September 24, 2010, 9:29 pm

haha very funny... whoever shut off my computer...
It said "Sorry this website is not working" something like that and then my comp went Force shutdown...(was on SPAM.com using proxy...)
btw, SPAM.com is so unprofessional that I don't have a good feeling using it...

alksandr - September 24, 2010, 10:50 pm

EDIT: SORRY DIDNT KNOW IT WAS GONNA BE DOUBLE POST

btw, you can do 0fees.net and register there but for email put a yopmail account name
ex:username@yopmail.com then go to yopmail.com and type in username and click Check for new mails then verify account from there. FW account info to ur real email later on.
btw, for the mysql database you have to go to vistapanel and create a database there to use for the config.php file.

Fdisk - September 25, 2010, 3:05 am

Thanx for this tut , i'll try this now !

flAmingw0rm - September 25, 2010, 4:40 am

What does SPAM has to do with your computer?

Probably you have a virus on your computer.

This has nothing to do with SPAM nor ISR Stealer.

elvinguitar - September 25, 2010, 6:21 pm

my account status in 000webhost is still "verification in progress".. but when i've checked my email, there's still no verification email

albusserverus - September 25, 2010, 8:44 pm

i'll try this one, thanks anyway :)

flAmingw0rm - September 26, 2010, 2:01 am

Why don't you use another host then?

There are many free hosts.

Try www.byethost.com.

elvinguitar - September 26, 2010, 2:33 am

i'll try that... thanks

too shortttt

amlac09 - September 30, 2010, 3:05 pm

thanks for this tutorial, it helps me alot

eXeSoul™ - September 30, 2010, 11:42 pm

Nice and easy tut.! ! :-D

darkzu - October 1, 2010, 12:29 am

good tut, thought i wont suggest the 000webhost as it will be very fast taken down, like many other free hosts just matter of time..

flAmingw0rm - October 1, 2010, 12:48 am

(Oct 1, 2010 12:29 AM)darkzu Wrote: [\[CITE\]](#) good tut, thought i wont suggest the 000webhost as it will be very fast taken down, like many other free hosts just matter of time..

Yeap, for that reason export your logs daily in case the host suspend you, you will have a backup.

mehimansu - October 1, 2010, 4:41 am

dude..almost all the PC's are protected with latest antivirus definition..flop idea..wouldn't work in most of the cases....

???c? - October 1, 2010, 6:56 am

Fatal error: Access denied for user 'a9353486_db'@'10.50.0.71' (using password: YES) in /home/a9353486/public_html/install.php on line 3

anyone help?

I've tryied that but I just can't get it work. I've done before istealer's db and everything worked pefrectly since I've rr-ed my windows and tryied to run istealer it says no license ect. so I wanted to try this program. I will try everything from the start again tomorrow, don't have time atm. If it won't work, I'll re-post tho thanks mate for helping

-mothered- - October 1, 2010, 7:55 am

An excellent tutorial Indeed, that's obviously had a lot of preparation.
Good work.

U MAD CUZ I RUN XBL? - October 1, 2010, 12:59 pm

Very nice and helpful tutorial. This will help many people thanks.

drizzy_effect - October 1, 2010, 1:56 pm

This look pretty awesome from here

ReAL HoMeR - October 1, 2010, 2:29 pm

Nice job making this tutorial.

Although I think SPAM will block your website quickly because they inspect every website manually.

Mucius Scaevola - October 1, 2010, 3:14 pm

Very good tutorial. Thanks a lot for this

B?ast - October 1, 2010, 3:40 pm

really nice TuT

vouch for him

so nice tut

My Life - October 1, 2010, 11:04 pm

Great tutorial with a lot of photos for explanation .

Nice job .

flAmingw0rm - October 2, 2010, 12:52 am

Thanks guys, glad I helped. ?

@pEdObEaR_: Don't copy and paste the info SPAM gives you, type them in the field where they should be manually.

amlac09 - October 2, 2010, 3:47 pm

thanks, already set up my stealer hahahaha, this tutorial of yours help me alot

Mucius Scaevola - October 3, 2010, 4:54 am

Great tutorial! It works great, is this a better stealer than iStealer? because i don't get any logs when i test it on myself... But it works fine

flAmingw0rm - October 3, 2010, 5:17 am

(Oct 3, 2010 04:54 AM)bling111 Wrote: [\[CITE\]](#) Great tutorial! It works great, is this a better stealer than iStealer? because i don't get any logs when i test it on myself... But it works fine
In my opinion, it's better than iStealer, because it has more stealing options.

Both iStealer and ISR Stealer steal only saved passwords, so it should work fine. Don't except it to log non-saved passwords. :)

Flosh - October 4, 2010, 2:40 pm

Onche Onche

When i open Install.php i get a
Fatal error: Can't connect to MySQL server on 'mysql6.OOOwebhost.com' (4) in
/home/a3635703/public_html/install.php on line 3

:(

flAmingw0rm - October 4, 2010, 2:53 pm

(Oct 4, 2010 02:40 PM)Flosh Wrote: [\[CITE\]](#) Onche Onche

:(

It's "SPAM", not "OOOwebhost". Zeros.

thekingant420 - October 4, 2010, 3:21 pm

Awesome ! Thanks for the A+ quality tutorial. keep it up.

Foxaris - October 4, 2010, 4:36 pm

Great tut! Definetly going to use this!

Just h8 to backup the logs :(

Flosh - October 5, 2010, 12:39 am

Ok sorry i'm stupid :)
Thanks ;)

iSource - October 5, 2010, 12:43 am

Very nice.
This helped a lot

Candidate No.1 - October 5, 2010, 1:26 am

is this compatible with any Crypters?
please reply

Flosh - October 5, 2010, 3:52 am

Thanks a lot for the tutorial and for the help :)

iforce - October 5, 2010, 4:47 am

Man BUNNN is awesome thanks for this post

NoLimit - October 6, 2010, 9:14 am

heh I've been looking for this! thanks flamingworm! and thanks to bunn for making this! I've already tested it and it works pretty awesome!

corruptxfatal - October 11, 2010, 12:10 pm

All files i create are 0 bytes and unable to open. My av is disabled. Anyone know the problem? I'm using net framework 4

n3verland - October 11, 2010, 12:15 pm

is .Net Framework required for the stealer ?

flAmingw0rm - October 12, 2010, 6:00 am

Windows Defender? Turn off your AV and re-download.

(Oct 11, 2010 12:15 PM)n3verland Wrote: [\[CITE\]](#) is .Net Framework required for the stealer ?
No, unless you use a crypter coded in .NET.

GetScraped - October 18, 2010, 12:01 am

This is an excellent tutorial, thank you for this.

nak15 - October 18, 2010, 6:06 pm

time to poor a huge glass of kool-aid and start my ipod playlist, because this will be a long 1hr set-up. I will infect tomorrow though.

took exactly 1hr, but it works :).

Need my teacher password.

Is the test file suppose to e 0kb, because i got a warning from microsoft.

.InSaNe - November 6, 2010, 5:39 pm

Nice tut man.

Helped alot of people I see :)

The Man With No Name - November 10, 2010, 10:41 am

images dont seem to be working, any chance of replacing them, its kinda hard to follow without the images, seems like a great tut tho

ovais_25 - November 10, 2010, 11:21 am

nice tutorial.. I will try it.

SinJorD - December 16, 2010, 6:00 am

Nice Tutorial, really helpful :D

Pics removed/deleted but still I was able to setup easily!

SIM-570417 - December 16, 2010, 7:19 am

ISR stealer is the best

but it gives alot of errors to pc

qeeper1 - February 3, 2012, 7:29 pm

most of the images are not loading up and some of the other ones are dead links

Mr Storm - February 4, 2012, 1:20 am

I wanted to try this but the download thing is dead. Can you fix it?

Thank you.

Ip3x50 - February 4, 2012, 4:28 am

The downloads arent work.. Can you fix this please?

Mr Storm - February 4, 2012, 7:11 am

Can someone upload a mirror for this?

Raped - February 4, 2012, 8:58 am

download file is removed and can't view pictures :/

Lycus - February 6, 2012, 12:52 pm

Guys stop b.u.m.p.ing this thread, it's over a year old.

ISR 0,3 is no longer supported with the new browsers etc.

Ryan Kerrigan - February 6, 2012, 1:04 pm

Download link doesn't work at the moment

Lycus - February 7, 2012, 8:54 am

(Feb 6, 2012 02:04 PM)Ryan Kerrigan Wrote: [\[CITE\]](#) Download link doesn't work at the moment

Yeah thanks, it's only been stated 5 times already.

Read the thread before you post.

lloyd327 - February 7, 2012, 9:21 am

thanks bro nice post ????

massari_fen - February 7, 2012, 9:58 am

fix your pics. Great tutorial. Thanks bro.

redthundermaddy - February 7, 2012, 10:20 am

awesooome....

best tutorial...thanks

Fraightend - February 8, 2012, 1:45 am

Dear flamingw0rm i want to ask that what about your site l33t.org i am an active member of your site

plz start it again.Thank you

sam2011hacker - February 8, 2012, 1:56 am

none of the above link is working. i tried all bt says file has been removed... plz update the link and pm me plzzz

sulavsuleman - April 28, 2012, 9:31 am

The download link doesn't work and no images can be seen...

derry - May 10, 2012, 12:52 pm

WOW....

hey buddy i need dota2...plzz:)

CloudRhymes - May 10, 2012, 2:25 pm

amazing tutorial thanks for doing this. Really helped me out.

aanchal sharma - September 24, 2012, 6:28 am

which one i do the copy url in isr stealer 0.4

avanda1121 - October 4, 2012, 7:08 am

After some time i get this on my site:

CPU Limit Reached....You are seeing this page because website has reached CPU usage limit of the server, and it was temporarily disabled.

How can i see again my website??

B4nk - December 19, 2012, 9:06 am

this is the latest updated one. here <http://www.sendspace.com/file/3s17j2>
pass: TrojanForge.com

bologie - September 15, 2013, 6:13 am

wow thanks man =:D

helped me alot :D

neosmart661 - June 15, 2016, 9:47 am

nice one dude do you mind if we chat on skype?send me your ID

chrisjo - June 23, 2016, 7:35 pm

thanks for the tutorial, very informative
