Thread: [\[EXCLUSIVE RELEASE\]Convert Visual Studio 2010 Projects to 2008 Projects!](#)

Mr. Anderson - September 22, 2010, 5:29 pm

I'm sure many people here have downloaded some source code made for visual studio 2010 and they have 2008. Well now you don't have to upgrade!

Just run this simple tool and then you can open up the source code in 2008 ?

Enjoy! Coded by me, John from vb-board!

Adzz - September 22, 2010, 5:39 pm

guys watch out i htink this program might be backdoored, virus scan doent link to anything and i dont think it acutally works

Mr. Anderson - September 22, 2010, 5:45 pm

fuck, I didnt link it right, I'll redo it.

edit: fixed. and Adzz did you even try it? it does work, run it in a sandbox if you don't trust it :p

Charmz - September 22, 2010, 5:58 pm

After analyzing I discovered that this file is infected with a RAT.

OK The application failed to initialize properly (0xc0000135). Click on OK to terminate the application.

Process: csrss.exe

Load-time DLLs: C:\WINDOWS\system32\ntdll.dll

This is a cybergate RAT. Do not download.

Mr. Anderson - September 22, 2010, 5:59 pm

WTF??? this isn't a RAT or any of that, I am a mod of vb-board and you'd think I'd post a rat?

you didnt even download it, because I see teh download count is still at 0. so why don't you actually try it before posting this crap?

go right now and scan it with your virus scan. can't somebody confirm that it isnt?

Crazychaos - September 22, 2010, 6:04 pm

any proof it works a pic wont prove it

Mr. Anderson - September 22, 2010, 6:05 pm

if that was true, run it in a sandbox.

and look at my previous releases, no complaints.

I pm you the source if you really need to see it.

and why is everyone picking on me? I spend 3 hours coding and I get THIS. why don't you make trouble for Every One who releases a program on the forum?

nathan72389 - September 22, 2010, 6:10 pm

0xc0000135 = NO FUCKING FRAMEWORK!

install some sorta version of the framework, or Learn to google the error code first b4 posting.

keep that shit up and you will earn a -3 for being stupid, not having ANY proof to back up your calim, AND not knowing your shit.

now!

since im here, im only busting this kids head about the error message, NOT saying that the file is clean or not.

Mr. Anderson - September 22, 2010, 6:13 pm

see? the error code had nothing to do with a virus. bring some PROOF next time.

Kotei - September 22, 2010, 6:13 pm

For fucks sakes, time for someone who actually knows his shit to check this. -.-

Charmz - September 22, 2010, 6:18 pm

I do know my shit... I know how a cybergate RAT acts, and it seems to act like that.

AND. It makes a process called "Process: csrss.exe"

A little suspicious huh?

Kotei - September 22, 2010, 6:21 pm

Cool story bro, too bad you don't know your shit. It is clean.

Decompiled and no back doored code at all.

Flashnox™ - September 22, 2010, 6:26 pm

humm....

Pulser - September 22, 2010, 6:27 pm

I did indeed scan this and it appears to be clean. I also monitored my HTTP traffic, as well as opened this in a sandbox, and it all appears to be fine.

Nice job.

Mr. Anderson - September 22, 2010, 6:28 pm

gawd I'm glad this issue is resolved :p
now some comments on how good it works?

Kotei - September 22, 2010, 6:30 pm

A little suspicious huh?

"Csrss stands for Client/Server Run-Time Subsystem, and is an essential subsystem that must be running at all times. Csrss is responsible for console windows, creating and/or deleting threads, and implementing some portions of the 16-bit virtual MS-DOS environment. "

"CSRSS is mainly responsible for Win32 console windows, GUI shutdown, and threading. It is critical to system operation; therefore, terminating this process will result in a Blue Screen of Death."

(Sep 22, 2010 07:32 PM)Xypher Wrote: [\[CITE\]](#) Most people are still using 2008, at least out of the people I know.

hmhhh why dont they upgrade?

Laziness or is there some MASSIVE error I havent encountered yet?

Kotei - September 22, 2010, 7:35 pm

I just like Visual Studio 2008 more.

DaRkReD - September 22, 2010, 7:36 pm

Man, that made my night nathan. I was about to put this in my signature, but it's too long ?

OP: Pretty nice release, tho I use 2010, I'm sure it'll come in handy.

StarZ - September 22, 2010, 10:43 pm

(Sep 22, 2010 07:34 PM)DaRkReD Wrote: [\[CITE\]](#) hmmm,why don't they upgrade?

I still use 2008, And I will most likely remain to till it becomes obsolete. (It's a nerd thing...) I have mine customized the way I like. I installed VS 2010 on my laptop and I just don't like the feel of it at all. I learned .Net on VS 2008 and I got familiar with it. Also VS 2008 runs faster on my PC's. So, Yeah I know some other people are like this also...

Mr. Anderson - September 27, 2010, 11:27 am

anyone try this? 134 downloads no replies -_-

50GTB - September 27, 2010, 11:49 am

you can convert on vb.net on its self anyway

ubbelol - September 27, 2010, 12:17 pm

To manually upgrade/downgrade:

[\[IMG\]http://i350.photobucket.com/albums/q408/ubbe12/downgradce.png\[/IMG\]](#)

11.00 = vb2010

10.00 = vb2008

50GTB - September 27, 2010, 12:21 pm

yes that is good way as well man

Kotei - September 27, 2010, 12:25 pm

Wow, UbbeloL I never knew you could edit like that.
Thank you for sharing that! :D

Mr. Anderson - *September 27, 2010, 12:51 pm*

thats actually what this program does.

it just edits the SLN +clean out any .cache files :D
