Thread: [Have problems with your RAT? Ask here.](#)

ariton - September 23, 2010, 12:42 pm

If you have any problem with your RAT, (portforwarding, setting-up RATs, spreading problem etc.) feel free to ask me here. I'll try answering all your questions... doesn't matter if you are l33t/ub3r/regular member :)

Yeno - September 23, 2010, 1:02 pm

First of all.. How nice :). Im new to this forum, as you can see by the date i joined, and my posts. Im trying to open a port on my second computer. Right now i use mac, and since my RAT(Spy-Net) doesnt support mac, i had to use my second com, which got windows 7 32bit. So i opened a port on my mac, and i succeded, but when i try to do it on the other computer, its closed? Can it be something with the drivers? I have recently installed windows 7 on it.

Skye™ - September 23, 2010, 1:02 pm

Can you pm me your msn so you can help me set it up?

I think you are trying to infect people especially with your so called free encryption service which gets servers from 256kb to 10mb.

ariton - September 23, 2010, 1:05 pm

Well, MAC doesn't supports spy-net, so you don't need to PF on there, too.

PF on Windows 7 32-bit too, you can PF (portforward) through router settings, Skype, and uTorrent. I can help you with that. Post here if you like to take the help.

(Sep 23, 2010 01:04 PM)Sezmic Wrote: [\[CITE\]](#) I think you are trying to infect people especially with your so called free encryption service which gets servers from 256kb to 10mb.

Wow, thanks for telling me.

Yeno - September 23, 2010, 1:14 pm

I just did the PF on my mac so i could be connectable on torrents sites ;)

But how come i cant PF my other computer? I did the same, just different port and different IP.

BMO? - September 23, 2010, 2:16 pm

i cant for the love of god get a port open to use it just wont work.

ariton - September 24, 2010, 4:00 am

(Sep 23, 2010 02:16 PM)jjkk Wrote: [\[CITE\]](#) i cant for the love of god get a port open to use it just wont work.

Portforward if you have a router.

Open cmd, then type ipconfig.

Copy default gateway IP to your brower and click Go.

You will be directed to your router's page.

Then, go to www.portforward.com, enter your router's name and serie and click it. There will be shown a tutorial: How to Portforward on YOUR router.

Good luck :)

665 - September 24, 2010, 7:51 am

Make sure to port foward the same ports on both router and modem, IF you have both.

T0SH1VA - September 24, 2010, 7:53 am

Hi my problem is... i forwarded the port to my lokal network Ip (192.XX.X.XXX) my no-ip host connects to my internet IP (78.XX...)

everytime i start to connect to my RAT with the server on my testcomputer it doesnt work .__.

ariton - September 24, 2010, 7:59 am

Pm me please, i will personaly help you.

Alessandro - September 24, 2010, 9:32 am

My port doesn't want to open at all, I've done exactly what www.portforward.com says and it still doesn't open at all. ://

This is my Router:

http://portforward.com/english/routers/port_forwarding/BT/BT2700HGVv2/fpadvert.htm

By the way what's a good port to open? I was told 82, i'm not sure if it's the port? What you think?

It would be great if you could help me! :D

ariton - September 24, 2010, 11:55 am

Try port 50, 100 or 135, 85. I use 135 :)

ariton - September 26, 2010, 5:39 am

I'm helping again. Please post if you need some RAT help.

1337nub - September 26, 2010, 12:44 pm

I setup my rat and forwarded my port and had multiple people download the infected file but they aren't appearing in the cerberus client? I tested the server on myself and it worked. What could I be doing wrong. I'd appreciate any help :)

ariton - September 26, 2010, 1:18 pm

If you've used a crypter, maybe the crypter didn't work for cerberus. If not, maybe the anti-viruses of the victims have detected the server. I'd recommend you to buy a private crypter.

jadoskills - September 26, 2010, 2:11 pm

Hi , my problem is i setup my rat and everything but i have problems with portforwarding ,

ariton - September 26, 2010, 2:15 pm

Try DarkComet RAT. It supports UPnP routers.

b-ball-1 - September 26, 2010, 2:28 pm

(Sep 26, 2010 02:25 PM)ariton Wrote: [\[CITE\]](#) Try DarkComet RAT. It supports UPnP routers. LOL, I don't get why I would try Darkcomet when I bought Blackshades.

So, do you know anything I could do? If so, Please reply in the thread:

<https://hackforums.net/showthread.php?tid=702937>

Thanks!

bradhowesable - September 26, 2010, 2:43 pm

I have a port open using DarkComets UpNp auto opener type thingy.
I need a crypter that wont mess up the file and thats free. any help?

Use the search bar. There are many crypters freeware/shareware that won't damage your DarkComet server. PM me if you can't find one.

K4b0 - September 27, 2010, 7:26 am

I have a usb modem etisalat huawei e1550

[img]http://img512.imageshack.us/img512/752/31546351.jpg[/img]

i tried UPnPMapper.exe ,utorrent,and alot of things,but i faild ??? .

The main problem that i cant enter to modem control panel , i did this steps

start>>cmd>>Ipconfig /all>>

copy the DNS server address, paste it in the web browser , "i got The page cannot be displayed"
and i also tried to copy the deafult gatway and my ip address to the browser but no luck .

-and i creat a topic for help but the problem still there .

<https://hackforums.net/showthread.php?tid=690604&page=1>

thnx 4 ur useful topic ?

sorry for my bad english iam egyption ?.

Have you tried PF through Skype?

Dot. - September 27, 2010, 10:21 am

I'm using Cerberus , it's the best functioning rat for me , but every crypter I use messes the file up , any ideas?

ariton - September 27, 2010, 10:24 am

(Sep 27, 2010 10:21 AM)Donkor Wrote: [\[CITE\]](#) I'm using Cerberus , it's the best functioning rat for me , but every crypter I use messes the file up , any ideas?

Search this forum for "PRIVATE" or "PUBLIC" crypters, but see if they are compatabile with

Cerberus.

Sorry mate, i don't know. You should use your friend Google or simply search hackforums: <https://hackforums.net/search.php> and search for a solution.

try2dream - September 30, 2010, 5:47 am

how easy are these RATs to pick up?

If i send the infection file to someone, is their AV program going to pick it up instantly or is this more aimed at victims that have no AV software on their computer?

ariton - September 30, 2010, 12:23 pm

You will need to crypt your RAT. There are many crypters in HF.

A crypter is a tool that crypts your RAT's source, that means that the crypted RAT won't get detected by AV's for a time. There are public crypters and private ones. Public crypters are shared with anyone for FREE and many of them are not FUD = Fully Un-Detectable, that means those are only UD = Un-Detectable. UD's are detected by some AV's. Private crypters are not shared for free. That means that those are shareware crypters, that means that that crypters are for selling and they are totally FUD fur a time.

You can also bind and change the RAT's server's icon to trick the victim to open your file after download. You can use icon changer for example to change the icon to "STEAM" icon, and rename your server (RAT's server) as steamkeys, and you will get many victims from this way.

You can also bind a server with a program, song, image or something. if you don't know what binding is... Binding means putting 2+ files in one. Example if a victim opens a RAT server binded with a photo, he will see the photo, but he will also get infected.

S!rk0 - September 30, 2010, 3:34 pm

I have a simple modem, and i haven't any solution for open port to set up my RAT server :/
Contact me if you can help me : F4th0r@live.fr
