Thread: [\[TUT\] Crack School Admins, Get on School Wifi, & Bypass Web Filters \(WEP Protected\)](#)

Grimskulls - September 24, 2010, 7:06 pm

This is my first tutorial, so bear with me. (This is written for Windows 7)

Things you will need:

Ophcrack Live CD - <http://ophcrack.sourceforge.net/>

Physical Access to School Computer connected to wifi network

VPN - <http://vpntool.com/> (register for free account, located in france)

1. Find a computer, preferably a schools laptop (desktop will work if it connects to internet via wifi) that is already setup to connect to their wifi with WEP encryption.
2. Insert Ophcrack Live CD into disc drive, and boot from cd. (If you don't know how to do this, google: how to boot from live cd)
3. Let the live cd run, and ophcrack linux will load up. Once it loads it'll begin cracking user accounts on that computer (not school domain). If you're lucky, the tech admin at your school will have a simple password to an account that has administrator access (you need admin access or this will not work!).
4. Once ophcrack cracks the LM hash for an account with administrator privileges, write the account name and password somewhere. Restart and remove disc. Let computer boot up normally. (mine was techhelp:twister)
5. Most schools will have Windows Server setup, some sort of login like this, windows 7 is a bit different:

Like that ^, click the drop down arrow and change it to "Log into this computer" and not the schools domain. (With the account you cracked earlier obviously)
6. Once you're in with the account with administrator access, Go to Start > Connect To > Show All Connections
7. Right click on Wireless Network Connection, and select Properties.
8. Click on the advanced tab and it should show some information about the encryption with a wep key box that has black dots or asterisks(*), there should be a check box that says show key or whatever (on windows 7 it does) and check it. The wireless key will now be visible. My schools wep key has like 20 characters but it works.
9. You have successfully obtained the schools WEP key, but yet web filters are still active since you are on their network.
10. To bypass web filters, install the downloaded VPN client from above, login with the registered information it gave you from their website. Once connection is made, freely browse any website!

(You can use other VPN's, the one I provided is free and worked for me, also if you have connection issues with the VPN, try restarting pc after installing and re-connect to vpn under administrator account).

ENJOY! ?

Invicious - September 24, 2010, 7:45 pm

Thank you for this release, I will try it tommorrow

MasterMind98 - September 24, 2010, 8:12 pm

Nice, this will be very useful for alot of people.

Grimskulls - September 24, 2010, 11:35 pm

Yeah I'm hoping it works for students whose school networks run on windows server. Good luck!

F0SSY - September 25, 2010, 3:33 am

Your Directors have to be fags at all...Windows as a Server software...that did hurt!!

Grimskulls - September 25, 2010, 10:17 am

Please keep your opinions to yourself, if this tutorial doesn't concern to you or your school does not have windows server installed, just simply don't post. That's all I ask, its for members whose schools do use windows servers.

Scar3croW - September 25, 2010, 10:39 am

Good Tut Thanks for helping.

Collided - September 25, 2010, 11:39 am

i dont understand what if your school has unsecured wifi?

Grimskulls - September 25, 2010, 2:25 pm

(Sep 25, 2010 11:39 AM)Collided Wrote: [\[CITE\]](#) i dont understand what if your school has unsecured wifi?

Than you can skip the steps requiring the wep key, but to bypass filters you'll need to still crack an admin account (to be able to install vpn network). Connect to internet (wifi or LAN) and use the VPN to bypass filters.

Dexi - September 27, 2010, 2:17 pm

Awesome tutorial.

only one question in my school we got like mini computers with no CD output do it work with USB or just download it from computer and start it up?

Grimskulls - September 27, 2010, 2:32 pm

Theres a windows installer that you can download on their computers but I highly recommend you download the live cd iso and format it to a usb stick (2 or 4 gb would work). Use the search function, or google. Theres plenty of tutorials on how to do that.

AiMProDiiGy?? - September 27, 2010, 2:54 pm

Thanks! this is a good tutorial !!

:D

huntereight - September 27, 2010, 3:03 pm

This kinda reminds me of mine... Actually a LOT like mine lol.

nurgah man - September 27, 2010, 3:07 pm

my previous school's WiFi didn't have a password, but whenever I connected to it on my iTouch it would act as if I never connected to anything, I restarted iTouch, tried again, etc, nothing lol. Maybe they just have a fucked up network or something.

Grimskulls - September 27, 2010, 4:36 pm

Proof? I never seen a tutorial like this besides the same steps of cracking admin account, which everyone would know if they used ophcrack.

??h™ - September 27, 2010, 4:50 pm

Ophcrack is awesome. I personally have well over 300 user names and passwords for my school. :P

Grimskulls - September 27, 2010, 6:01 pm

I can't get them because when I run ophcrack, it goes for the accounts on the computer and not my schools domain which is like: isd191.local or something.

Light Arcana - September 30, 2010, 7:28 pm

It doesn't seem to work in my school, stupid school.

.Nick. - October 1, 2010, 10:37 am

this is a really good and helpful tutorial :D

Larry King - October 1, 2010, 1:56 pm

Thanks man that helped a lot ?

Grimskulls - October 1, 2010, 8:32 pm

Your welcome, hopefully it works. Let me know if you run into any issues.

avidhacker - October 1, 2010, 8:52 pm

great tut..this was really helpful

locked - October 1, 2010, 11:05 pm

nice post.

it's very very usefull for me.

thank's

2 Cents - October 1, 2010, 11:57 pm

Great guide, this may work on my school's computers.

smit - October 2, 2010, 11:01 am

Nice tut

Thanx for sharing !!!!

Bio-Blue - October 2, 2010, 8:54 pm

Good Post,I could of used this a lot last year...

ztrain - October 2, 2010, 11:05 pm

very good, another thing that might be useful, is that if you force windows to think there is an error (hold down the power button while windows is booting) then you can boot into safe mode with networking, you can then usually get on an admin account and do whatever you want, but if you have a decent it guy, it will be blocked. also, u can packet sniff to get wep keys as well, and due to schools having lots of internet traffic, i doubt that would take more then an hour to get 1m+

Grimskulls - October 3, 2010, 5:46 pm

Nice, thanks for the additions.

TheViper - March 20, 2011, 8:43 pm

that really do need :p yeah finally.

I thought rat or keylogger hacking should be necessary for school, so I do not need to buy?
so ? :)
