Thread: [?•?? < \[FUD\] logkeys Linux keylogger version 0.1.1a \(alpha\) \[100% free download\] > ??•?](#)

CustomiZer - September 27, 2010, 10:46 am

logkeys

a GNU/Linux keylogger that works!

NEWS: logkeys version 0.1.1a (alpha) releasedfixed 100% CPU issue on x64

various bug fixes

removed pgrep dependency

PID file now in /var/run/

other symlink attack vulnerability fixes

other security fixes

code refactoring

remote log uploading via HTTP

lkl and lklk are now llk and llkk to avoid confusion

llk and llkk are now programs that run logkeys-start.sh/-stop.sh scripts

also recognize "HID" USB keyboard devices

bug fixes

What is logkeys?

logkeys is a linux keylogger (GNU/Linux systems only). It is no more advanced than other available linux keyloggers, but is a bit more up to date, it doesn't unreliably repeat keys and it should never crash your X. All in all, it just seems to work. It relies on event interface of the Linux input subsystem. Once set, it logs all common character and function keys, while also being fully aware of Shift and AltGr key modifiers. It works with serial as well as USB keyboards.

Are there alternative Linux keyloggers?

There is a plethora of keyloggers for Windows, but not so many for Linux. On GNU/Linux systems and other reasonable operating systems, keyloggers can be easily implemented with a few lines of shell code. Novice users, however, are usually limited to a narrow set of the following tools: [lkl](#) from 2005, uberkey, which appears dead, [THC-vlogger](#), made by a renowned group of hackers, and [PyKeylogger](#). All these tools have their pros and cons. Lkl, for example, sometimes abnormally repeats keys and its keymap configuration is rather awkward for a range of users. Uberkey, which is

just over a hundred lines of code, also often repeats keys and what is worse, it makes your mouse move abruptly, losing any sense of control. PyKeylogger, on the other hand, while very feature rich, only works in X environment. Finally, there is vlogger, ...umm..., about which I cannot say anything specifically, only that it is receiving low score all around the web and it only logs shell sessions. There may be other tools, but either way logkeys definitely makes a simple and competitive addition.

Does logkeys work with USB keyboards?

logkeys Linux keylogger works with serial as well as USB keyboards or similar "HID" devices.

So what keyboards logkeys does work with?

logkeys supports keyboards those are standard 101 to 105-key PC keyboards with no Asian extensions.

Download [HERE](#)

NOTE: I have not coded this, nor am I in any way related to the project. I'm just sharing with you guys who keep asking without searching.

Nice share :) im sure people will find this useful.

Solidify - September 27, 2010, 1:04 pm

Please do not spam me your thread link on MSN.

If you'd like to inform me of your product, at least have the courtesy of speaking to me about it.

versx - September 27, 2010, 1:05 pm

Pretty nice share man. thanks!

Thank you, glad you enjoyed it.

Kotei - September 30, 2010, 1:28 pm

Linux is one of the least used OS's and spreading for it would be insanely hard, so no this won't be oh so popular.

This could be used for specific attacks

CustomiZer - October 9, 2010, 11:20 am

BUMPing this up for those searching for this ?

FiLeJon - October 9, 2010, 2:04 pm

Pretty nice share man. thanks!

d3adz3r0 - October 21, 2010, 9:19 am

thanks... this is one unique app

The pleasure is mine ?

Kom - January 21, 2011, 4:08 am

This looks brilliant, thanks for the share, ill try it on my backtrack and fedora when i get a chance ^^

FANB?Y - January 21, 2011, 7:38 am

am scerching for a keylogger that run on CentOS and Redhat with extention like .rpm file ! can you suggest it !

danidm - January 21, 2011, 9:04 am

Can any one tell me that its a FUD?

ljsbergen - January 22, 2011, 5:16 am

Nice man i go test this logger

lownoteryan - January 25, 2011, 6:19 pm

How do I install this to Linux (Ubuntu)? I downloaded it yesterday for kicks and giggles. Can someone give me the terminal code please?

panni56 - March 12, 2011, 10:38 pm

Nlce share dude.... Will it work on myself???

JOW - November 23, 2011, 11:11 am

I know this is an old thread but I have never installed a keylogger on linux /im using fedora btw, you

think you or some one here help me set up the server? thanks dude.

puchu1097 - *November 23, 2011, 6:15 pm*

LET ME TRY IT...

Thank you very much.. :)
