Thread: [\[FUD\] DarkLogger \(FUD Keylogger with UAC Bypass\) \[FUD\]](#)

Ph?us - April 27, 2009, 3:54 pm

Today I made a very efficient keylogger by combining C++, VB.Net, and C# in one program. Here is a list of its features:

- # UAC Bypass
- # Sends Logs by Email
- # FUD
- # Logs Symbols, Numbers, and Letters
- # Log Encryption
- # Accurate Log
- # Cheap

The cost is \$4. I would say that it is worth it. For a totally FUD keylogger. PM me if you are interested.

Please note that people that purchase my keylogger now will get a discount when I release any other programs and lifetime support.

Can this keylogger send to FTP?

I think that would make it sell way better.

.ZEF - April 28, 2009, 2:04 pm

Logs are terrible and the process is viewable in taskmanager

Do you really think he is gonna give it to you for free? He is asking 4USD and to my knowledge not selling it until he gets the logs fixed.

Good day
