Thread: [QUICK QUICK QUICK QUESTION!!!!](#)

The White Tiger - October 12, 2010, 10:15 am

just this one,

do i need to have a static ip or a dynamic ip to portforward??? please answer quick

NoN00b - October 12, 2010, 10:19 am

depends on your router, my router works with pc names, so no need to use a static one, but i think it will be better to have one.

jimbo- - October 12, 2010, 10:19 am

im assuming that ur talking about ur local IP. you can have either. it can be a pain with dynamic tho because everytime ur local IP changes, u will have to re portforward. its better to have static

wrong section btw

too short

too shortmate i don't know much about RAT , how it works? can you give me a thread link ? by the way my local ip is of dynamic type so can you give RAT tutorial for dynamic ip !! thanks ?

NoN00b - October 12, 2010, 10:24 am

the rat works also with a dynamic one, but the portforwarding should be done with a static ip

The White Tiger - October 12, 2010, 10:26 am

got a problem, i changed in static ip and my internet didnt work anymore i resetted it to dynamic and my internet worked

jimbo- - October 12, 2010, 11:16 am

u need to no the subnet mask, gateway ip, and DNS servers in order to create a static IP

atomiccocalola - October 12, 2010, 12:36 pm

Here is a great website that will help you setup a static ip address if you are having problems.
<http://portforward.com/networking/staticip.htm>

vladimirzec - October 12, 2010, 1:05 pm

I would strongly recommend static IP cause if you don't have static IP you will have to portforward every time...However this leaves your traces more vulnerable...

In my opinion the best option is portforwarded VPN cause you are protected from third side and not giving your real IP and having problems with portforwarding, but as answer to your question I would

check STATIC IP.Hope this helps!
