Thread: [win7 keylogger?](#)

Tuxx95 - October 13, 2010, 6:37 pm

does anyone know the name of the dll needed to log keys in win7 I followed soulcollectors tut (great tut btw) and I couldnt find the name of the dll for win7

Windows 7 is no different from any other windows operating system for key logging. Just make a keyboard hook and log the keys. His tutorial should contain all of the information that you need. The WinApi dll he imported is in every modern windows operating system.

<http://imgtfy.com/?q=.net+keyboard+hook>

just using vb for the moment
and

WinSock - October 14, 2010, 3:26 pm

His tutorial is working fine, I didn't copy&paste but it does work. If you really want to understand how the keylogger works i suggest searching "VB.Net Keyboard Hook".
