This is my new program I am working on. I will continue to develop it. This is a very early version of program. Enjoy...

It will be available for download when I add a few more things.

Dean - October 14, 2010, 6:29 am

Very very nice.

Looks good, and has potential to go so much further.

H3x0S - October 14, 2010, 6:32 am

Yes, I just need some more ideas for the next version.

1a2a3a - October 14, 2010, 6:32 am

Very good program.

Please submitting source code to me? (in pm?)

Sorry, but program is not open-source.

Coder - October 14, 2010, 6:43 am

Looks nice. I have some suggestions:

Interval of frames animation, loop settings, GIF colors.

Byakuya - October 14, 2010, 7:08 am

Looks nice, but perhaps adding an "Export" option will do the trick? ;)

Rae - October 14, 2010, 7:13 am

Nice release. Good luck with future versions.

It exports the GIF to "1.GIF" in folder where you placed a program. I will add the option to choose a filename in next version.

pr0t0typ3 - October 14, 2010, 7:48 am

Did you use your own implementation of the LZW Compression or did you use a public one ?
Anyway it looks cool

I've used the NGif library, but for the future versions I will modify it because it has just few options. ?

H3x0S - October 14, 2010, 3:28 pm

I've changed the name of project because I will add many more things to this project.
