Tirant - October 15, 2010, 3:25 pm

This is a tool i got from a friend a while ago, My antivirus DOES detect it, but i never had a problem using it, it works.

PS : dont change the Delay (seconds)

<http://adf.ly/9AZL> - Download Link

Not shitcash anymore.

[u][b]

Virustotal Scan :

<http://www.virustotal.com/file-scan/report.html?id=746de20b6d23bf07b5db62c55783ab2159bfeb5dbf3518cabf89500e21a57580-1287181314>

Use at your own risk i guess, it works, and I havent gotten a problem in a few months now.

PS : if you think that i did it, tell me why i would post a virus scan that shows it being detected with a bunch of shit.

Vouch for it working :

What does this do? Please Provide Info For me :p

Tirant - October 15, 2010, 3:28 pm

okay, so basicly; this is VEX 6, but a more advanced version; it spams the server either with joining and leaving fast, comment change spamming, joining and leaving CHAT; and spamming chat.

you choose the number of bots u want, and all u need is there ip and port; and the password if they have one.

The most effective ventrilo CRASHER is the comment change spam, and if u try it on urself, ull see why.

I wouldnt recommend using it

It loads up a bin called start.exe

after that it dissapears and a bin saying unknown image just shows up and stays...

This is not safe.

the program didnt work

Gayest fucking thread.. not only did you just upload a public tool on shitcash, but it looks like someone leeches another wanna be vent spammer. This is the same fucking thing, and it sucks. Vex6/8 is a shitty ripoff of VentriloFP made by Luigi Auriemma. It does everything Vex6/8 does and more. Vex actually has ventriloFP inside of vex, and all it does it use ventriloFP but it adds a GUI and takes away options.. btw, wrong forum.

And if they do they wont test it and post in 20 sekonds.

So keep your leechesd shitt for your self.
And honestly ubers/leet can pm for mediafire, my god, rep hunter alert.

I've had tons off threads with more views than responses, thats how a forum works.
Nerd rage alert?

I said " Rest " which implies everyone can, the difference is, leechers will just think its for uber or leet because they dont actually READ THE FUCKING THREAD. "Ya new fag" I registered a few months ago; what, i have to be a fuckin nerd, 24/7 activity with 5000 posts to not be considered new? I made two tutorials, which atleast gives a contribution to the forums for the least part, and guess what, they did test and they said it worked.

Thats how a forum works, thats ur way of thinking about it, not mine.

kthxbye.

Ps : I put it on media fire so you can shut the fuck up.

I have been thinking of coding my own, I have some of the basic gui code done, but all attempts to use my own connection method fails. I have taken source code apart from similar open source projects but unable to find what it is I really need. What I am looking for is some documentation on the ventrilo connection method, if you might be able to point me in the right direction, would be great.
