D3s7iny - October 17, 2010, 7:42 am

downloading atm, looks nice

SeventyFive - October 17, 2010, 7:45 am

Is it FUD?

Whenever I attempt to create a Java Drive-By and have to Crypt it, the crypter usually corrupts the keyloggers. I am new.

What's the point of making a new V of the logger, if :

1. it's not FUD
 2. not even sending mail (except for the "Test mail yeah..")
 3. Fake message not working ? great
 4. i ticked all options... turned off AV / firewall, opened it... not even blocking my cmd or any website, maybe you can explain me why ? o.0

Debugowanie w trybie JIT

Aby włączyc debugowanie w trybie JIT (just-in-time), plik .config tej aplikacji lub komputera (machine.config) musi mieć wartość jitDebugging ustawioną w sekcji system.windows.forms. Aplikacja musi być również skompilowana z włączonym debugowaniem.

Na przykład:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box. [/code]

JIT Debugging
To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>  
  <system.windows.forms jitDebugging="true" />  
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.
