xD Yea pretty easy programm. Can't learn to much from this bcause you take the Ext IP from a site where nothing else is shown, so people can't see how to get a specific line out of a website. But anyways nice tut. ^^

too short

Romeo. - *October 18, 2010, 7:24 am*

rar virus scans are useless.

And i can't believe you puted a simple "get my ip" source behind a adf.ly link ...

ThePka - *October 18, 2010, 8:03 am*

Why should you use get my ip at clicking button? Why not when the program loads.

And you could always use this

Code Function GetIP() As String

Using GetAdd As New Net.WebClient

Return GetAdd.DownloadString("http://whatismyip.org/")

End Using

End Function

And make it show in a textbox by typing this at form1_load

Code Textbox1.text = GetIP()Nothing is simpler as this.

S!rk0 - *October 19, 2010, 2:14 pm*

When the program load, you have the ip loaded, i have made

Code WebBrowser1.Navigate ...in

Code Form1_Load ...

...
