Life Keylogger V2.0 by eXero

I have made a keylogger, version two, and have decided to release it. It should be compatable with all Windows Operating Systems. Please use this wisely. If you like it, and or use it please post a reply on this thread. Please do not leech my work. Post a reply if you download. Do not post this anywhere else without my permission. Read the README file before using the program. DO NOT scan anywhere but novirusthanks.org. DO NOT make a mirror download link, or make your own download link. Thanks to Fitz- for the awesome tutorial! I edited the code to fit my own needs though. Sorry theres no stub. Don't have time or resources to make one. Use your own! But it is already 100% FUD!

JaXoMaN - October 18, 2010, 12:27 pm

This doesn't work for 64xbit ? :/, Anyways it looks like a really simple and usefull keylogger

Demonic Wraith - October 18, 2010, 1:48 pm

thanks for the share appreciate it looks good Edit could someone please explain what the link viewer option is i mean obvious view links i still dont get it tho

eXero - October 18, 2010, 2:43 pm

It has to be username@gmail.com just to clear that up.

When the victim opens your virus, the links open up if you have that option checked.

dani009 - October 18, 2010, 3:20 pm

nice but i want dat plese send me dis i need it very badly

Dumbass. Obviously you have not seen the amount of other programs I have released, nor learned of my coding knowledge. Please actually know what you are talking about before posting useless posts. Look in the program description, and you will clearly see that Fitz- is mentioned.

Baws - January 4, 2011, 8:08 pm

Can't see pic =[

Re-upload please =]

Stalkar - January 6, 2011, 11:03 am

It would be nice if the program actually worked.

eXero - January 6, 2011, 7:48 pm

Does work for most people, but yes it would. It would also be nice, if you were nice.

lightbrown_eyes - January 7, 2011, 3:12 am

The21stSpartan - January 11, 2011, 10:04 pm

(Jan 11, 2011 09:41 PM)tidus091 Wrote: [\[CITE\]](#) nice Keylogger but is it 100% FUD ?? :)

Yes, it says FUD in the title.

BTW OP, you may want to reupload your pics to somewhere besides [censored], they get taken down really fast.

BlissZA - January 12, 2011, 1:20 am

How does this actually work? Sorry im a smith. Do you just put your GMail Username and Password, Servername, 1800 in milliseconds and then build it and send the Server.exe file to people? I also got a "Sub.exe" file (Should I send that also). Also what is "Antis". Sorry for stupid questions

AsafAvidan - January 12, 2011, 6:43 am

Edward Oak - January 12, 2011, 12:59 pm

Hi, I'm a Cybergate user mainly and I don't understand some little things.

Firstly, what is the Link Viewer Feature?

Second, Is the Downloader option is a feature or the program is a downloader (Sorry just wanna make sure)

Third, I'm really not sure about what to do with the created stub, I suppose I should bind it with the server, right?

Thanks alot and sorry again for my noobish questions

sshd - January 12, 2011, 2:03 pm

Nice! I'm downloading! Looks awesome!

eXero - January 12, 2011, 4:13 pm

Read the thread Le Dodu. Has been asked, and answered many times.
