Thread: [????Folder Hider and Encryption!\[RELEASE\] N3w_2_H@Ck1n™ Inspired](#)

Xerotic - October 18, 2010, 5:46 pm

NOW OPEN-SOURCE!

Hey guys! Sparked by N3w_2_H@Ck1n™'s unfortunate loss while trying to hide important folders (using 3rd-party software), I decided to make my own! There are TWO version of this. One for users with Python and one for those without (go get it, seriously, get Python [HERE](#)) ?

Anyway, what this does is hides folders and password protects them as well. There is also a function that destroys all files related to the program, if you want to scrap it. The first version was made in batch, and it worked well for N3w_2_H@Ck1n™, but I improved it greatly, bringing Python into it. ?

N3w_2_H@Ck1n™ Wrote:Works perfectly, thanks.

[img]<http://img15.imageshack.us/img15/234/hidel.png>[/img]

Okay, here is the download location for the PYTHON file (recommended, if you dont have Python, again, get it [HERE](#), the program is so much better in python version...). Also, if using this source for a basis in your program, please give credits. Ask for permission before releasing elsewhere.

NOTE*** This was made in Windows 7, and works flawlessly. Other tested OS's are below.

Currently tested in:

Windows XP - Working

Windows Vista - Working

Windows 7 - Working

Version 10.6 of Mac OS X (Snow Leopard) - Working

(Oct 18, 2010 06:17 PM)William J. Cunning Wrote: [\[CITE\]](#) umm looks nice but can ya explain what python is and why we need it for this program ?

Sorry if that's noobish but it's just something I ain't familiar with and I am really looking for a program that will hide and protect folders at this present time...

Python is a programming language, one of the most powerful out there, however, in Python form, it requires the Python interpreter.

(Oct 21, 2010 09:00 AM)LemonKush Wrote: [\[CITE\]](#) have any pics of it ? O_o

It is all command line, therefore no GUI. I am thinking about making a GUI for it though.

I am also posting a poll for you to tell me what you think. Thanks for your time, do not forget to leave a comment!?

Spoiler ([Click to View](#))now Hiding my porn files (Oct 21, 2010 11:28 AM)CtrlAltXGhostX Wrote: [\[CITE\]](#) I tested this program and can vouch for its worthiness!

It is a very simple to use program - Hide, Show and Destroy. When you hide a file, you lock it with a password, and to recover the file, you need only to type it in.

The program works quickly and efficiently with a strong encryption, and is something I will use often!

Another great program Xerotic! Kudos to you! (Oct 22, 2010 07:04 AM)TheHornyChickz Wrote: [\[CITE\]](#) My poll answer :

have any pics of it ? O_o

Xerotic - October 21, 2010, 9:11 am

(Oct 21, 2010 09:00 AM)LemonKush Wrote: ([CITE](#)) have any pics of it ? O_o

Its all simple command line. Want a picture of a black box? Or of a hidden folder (blank space).

I can do both :)

Ethereal - October 21, 2010, 11:28 am

Perhaps. I need to do something compatible with more computers.

I'm not Real - November 6, 2010, 1:39 pm

Downloading this now! I remember N3w_2_H@Ck1n™'s post about loosing everything on his computer. Nice work Xerotic!

Xerotic - November 6, 2010, 3:41 pm

(Nov 6, 2010 01:39 PM)Why So Serious? Wrote: [\[CITE\]](#) Downloading this now! I remember N3w_2_H@Ck1n™'s post about loosing everything on his computer. Nice work Xerotic!

The Python version is much better, merely because you can take the file anywhere, encrypt a folder anywhere, whereas the exe version... you have to lug that entire folder.

JrMn - November 8, 2010, 9:18 am

Great job man! :) Works like a charm on win7.

icebox19 - November 8, 2010, 9:54 am

thanks. working for me, nice tool

(Nov 12, 2010 06:55 PM)h4ckingURLife Wrote: [\[CITE\]](#) Looks great, thanks for the share. Great idea to make it in python, it's a great language. ?

Yes, you can do anything with Python, but shame that not many have it installed. I really want to carry Python further, but the fact is... not many people use it, but that will not stop me.

0xebfe - November 14, 2010, 7:20 pm

Can you just post the source with <CODE> tags?

Xerotic - November 14, 2010, 7:33 pm

(Nov 14, 2010 08:20 PM)Dooms_day Wrote: [\[CITE\]](#) Can you just post the source with <CODE> tags?

Well.. I suppose. Problems with the download link, or something else?

0xebfe - November 15, 2010, 7:40 am

I just feel weird downloading some rar when I can just make a .py file and paste the code there, also lets me read it incase I don't wana download it.

Itzah - November 15, 2010, 8:11 am

Hmm this will come in handy for hiding my goodies thanks for the share.

Xerotic - November 15, 2010, 1:28 pm

Yea, well there is one download (only Python version [.py]) and the ZIP bundle for those without Python, posting source now though.

0xebfe - November 15, 2010, 2:00 pm

Ah perfect thanks. ?

Xerotic - November 15, 2010, 2:20 pm

(Nov 15, 2010 03:00 PM)Dooms_day Wrote: [\[CITE\]](#) Ah perfect thanks. ?

No problem! Tell me what you think of it.

0xebfe - November 15, 2010, 6:26 pm

Yep, works, you can definitely hide stuff from your parents, I'm wondering if it overwrites the original folder's sectors so it can't be recovered by more intense methods...lol hopefully I won't have to hide something from the FBI and all I have is your python script open in eclipse!

Xerotic - November 15, 2010, 6:30 pm

(Nov 15, 2010 07:26 PM)Dooms_day Wrote: [\[CITE\]](#) Yep, works, you can definitely hide stuff from your parents, I'm wondering if it overwrites the original folder's sectors so it can't be recovered by more intense methods...lol hopefully I won't have to hide something from the FBI and all I have is your python script open in eclipse!

Well, I haven't tried to hard to find them, but if you 'show hidden files and folders' it does not come out. :)

It is safer than just having it in the open!

Thanks4Everything - March 11, 2011, 8:35 am

I really could use a tool like this, but when I try to run the .py version I get "invalid syntax", what did I do wrong?

Xerotic - March 11, 2011, 2:08 pm

(Mar 11, 2011 09:35 AM)EnergySource Wrote: [\[CITE\]](#) I really could use a tool like this, but when I try to run the .py version I get "invalid syntax", what did I do wrong?

You will need Version 2.x or Python.

Thanks4Everything - March 12, 2011, 1:02 am

Thanks, now it works.

But, the folder still is visable after I hide it. It is displayed with transparency.

Tommy-Hack - March 12, 2011, 2:53 am

What do you have to do to make this work on a MAC os X ?

Oak - March 29, 2011, 7:03 pm

Amazing Job man, I still use this today.

4fun - March 29, 2011, 11:25 pm

@xerotic

do u have a group sir? coz i want to join and learn more about python, im new in python but im a fast learner.. im bored studying alone T_T

DutchButch - March 29, 2011, 11:28 pm

can you give some more information of what encryption is used

Aeon-Ev3L - March 30, 2011, 1:39 am

thank you sharing it works fine ?

Corrupt. - March 30, 2011, 6:03 am

Bro! You should make a file finder! If you ever loose these files make a file finder :D

Xerotic - March 30, 2011, 2:05 pm

(Mar 29, 2011 11:28 PM)DutchButch Wrote: [\[CITE\]](#) can you give some more information of what encryption is used

Um? That voids the point, plus it is in the source anyway.. (Mar 30, 2011 06:03 AM)Corrupt. Wrote: [\[CITE\]](#) Bro! You should make a file finder! If you ever loose these files make a file finder :D

Hm. Sure, I will try it out.

Lemme check the files. Re-download it.

Instructions:

- Download ZIP
- Extract
- KEEP ALL FILES IN THE SAME FOLDER
- Run Program
- 'H'
- 'N'
- Choose folder Name
- Choose pass
- Now, show it
- 'S'
- Password here..

??

Does that work?

Vito Scaletta - August 28, 2011, 12:58 am
