System Security Source

Since this was a program i made awhile ago, i have no intention of selling it. It is old and practically worthless to me. However, if anyone on hackforums would like it, you may have it :-).

Features:

1. Uncloseable using ALT+F4.
2. False virus warnings.
3. VERY, VERY Annoying.
4. The Program Speaks in a Computer Voice.
5. Prompts the user that his/her PC is Infected every 40 Seconds.
6. The Window is Ontop of everything else, exept full screen objects.
7. The program starts up with windows.

Note: Even when you debug it with vb, it still adds itself to the registry, so i recommend you ' the line of code before it does so.

EDIT: I have removed the line of code for you.

I Hope you have some fun with it. :-). Includes registration file.

I already modded it, has USB Spread. Multiple startup locations, if it isnt running, a loader makes it run. And if the loader isn't running, the rouge makes it run.

I was bored :P

Forgot to mention.. The program has inbuilt custom gui, so you can steal that piece of code if you want. The Virus log is always different, you can add your own aswell.

Really good work, I'll add some spreading modules and see the efficiency. Thanks for this share and keep up the good work.

Don't worry I'll just use it for myself and will not re upload.
