C# Process Killer

Hey guys, so I was kinda bored and decided to throw this together. This could possibly be implemented to an anti leak system. This process watcher can be used to monitor for HTTP Debuggers, packet sniffers, etc. If one of them is opened, it will exit the program and kill the process.

This system could be bypassed pretty easily, but I'm sure someone out there could mod it and change it up, making this much better.

I'm not gonna lie, the code is a little sloppy and I made this mainly so people could put it to some use!

Here is what happens when I try to open Fiddler and Wireshark.

I hope someone finds this useful!

BaussHacker - October 22, 2010, 5:34 pm

It is like my net killer i made long time ago.

<http://www.youtube.com/watch?v=3HII9wIYgHg>

if anybody wants the source code or the program, PM me :P

Haha, I watched that video. Seems like it would be very annoying.

Mr. Anderson - October 22, 2010, 5:38 pm

nice work!

handy piece of code :)

I shared it to so many friends and told them to give it out and tell it was aimbot several games.
I think alot got infected of it.
Thought a reboot is stopping it.
Ive made alot funny things like that through times.
cmd spammers, http stealers eg.

You could have inserted a quick snippet of code that would have added it to the computers startup.
That would have really got them :3

boogiebear - October 22, 2010, 5:49 pm

if you rename the wireshark exe, will it still detect it? thats the way most anti-wiresharks i've seen are, it'd be nice if yours was better than that :)

tkblackbelt - October 22, 2010, 5:51 pm

Very usefull thanks for releasing it. I was actaully thinking about implementing something like this in my programs

BaussHacker - October 22, 2010, 5:53 pm

I was just using process.kill and hiding it from task manager.
And I wasn't really about to infect peoples.
It was just to make fun with my friends haha. xD

Thanks for the comments everyone, if someone wants to throw out some ideas for this, I will do my best to implement them.

Learn how to properly create functions. You have two that do virtually the same thing.

I just threw it together so that it would work. Only as an example for people to begin to work off of. Please stop posting negative comments on mine and other peoples threads, its very discouraging.

Anyway, thanks for the comment.

Negative comments? It's called constructive criticism. I also posted a little document you can read to improve your programming. How is that discouraging?

I'm not simply referring to this thread. Several of my other threads were commented on by you saying rude and disrespectful things. I have also seen you posting on other members threads arguing with them about code.

I myself do not mean to come off as rude with this post, I also always respect constructive criticism, but telling me I'm a beginner coder and not leaving any good comments, is well, discouraging.

Anyway, have a nice day.

Oh my, well, I'm not sure about that. I'm sure he means well with his comments. I just kind of wish he kept them a little more positive.

lol ;)

You mean my posts pointing out bad practices in your code? Honestly IMO that's one of the best posts you can get. I wish someone that knew better than me could comment on everything I code.

Quote: I have also seen you posting on other members threads arguing with them about code.

You mean me flaming someone that ripped a code snippet of mine?

BaussHacker - October 22, 2010, 8:27 pm

lol ;)With 0 knowledge I wasn't like serious.

But yea, his posting negative alot.

Is kinda annoying to look at, but there is always peoples in a forum that have to be the trolls.

@ALL stop get off topic and keep on topic, serious take it to a PM.

Okay, well in that case, thanks for the feedback.
