Thread: [How to completely destroy a website?](#)

Arenh - October 22, 2010, 5:50 pm

Hello guys!

I've stolen a websites cPanel, i have all logins to godaddy, everything, e-mails, i mean everything!

I took his DB and i want to kick his website out of the world and take his place with my website!!

So i want to know how to completely fuck his website up, that there would be no chance to repair it, maybe i could do something with his domains? Maybe redirect them somewhere, i need ideas, tips, i want to fuck this website, deindex it from google, take it out with all of his backlinks lol!!

HELP ME GUYS!!

just delete his db login to the ftp delete all his files then upload your files
import your db job done

iPwnage - October 22, 2010, 5:56 pm

Well if you have access to cpanel :O THEN CHANGE DNS :). Remove his DNS entries xD. Then you can't access the site at all.

Or if you have access to the godaddy, move the domain name over to a new account/or change the password, so that he cant use a different domain name.

xD

So if i do this, his hosting company won't be able to backup his files? He has a VPS :D

Arenh - October 23, 2010, 2:48 am

I want to make sure if i will fallow your directions, the website won't come back again?!?

I dont know about godaddy, but most hosts (e.g. Host gator) do weekly backups on Sunday. If he has no personal downloaded backups, or home directory backups, then once it is gone, and the server backs up, it is gone forever.
