Thread: [\[C#\] Multi File Downloader \[None-Malware\] \[TUT\]](#)

xSilent - October 23, 2010, 12:35 am

Things needed:

C#

A brain

Ok, lets get started.

First thing you need to do is create a new class and name it Downloader.

Once you have completed that, open the spoiler below for the codes and explanations.

Spoiler [\(Click to View\)](#)

Imports

Code using System;

using System.Net;

using System.Windows.Forms;

Now, its time to code your add link dialog.

Create a new form and name it Add.

Here is a base UI and code

Spoiler [\(Click to View\)](#)

Now its time to work on the main form, here is a base UI

Spoiler [\(Click to View\)](#)

Add a context menu and add 3 buttons "Add, Remove and Download"

Click on Add then

Spoiler [\(Click to View\)](#)

Remove

Spoiler [\(Click to View\)](#)

Code private void removeToolStripMenuItem_Click(object sender, EventArgs e)

```
{
    foreach (ListViewItem i in links.SelectedItems)
        i.Remove(); //Simple, Right?
```

}

Download

Spoiler ([Click to View](#))

And the download void

Spoiler ([Click to View](#))

The end result..

Spoiler ([Click to View](#))

I hoped this helps some people. ?

I just got the idea and decided to make a tutorial.

Nice tutorial.., could make me convert to C# soon :P

GoldenPhe0nix - *October 23, 2010, 12:42 am*

LOL. Look nice. You should edit the thread title and add [TUT] their so people will know its a tutorial. Most people when seeing the heading as it is now will think its about a program you have made and realeased and possibly want to sell and not source or tut.

Right, forgot about that.

If anyone has a tutorial request, let me know.
