I see many topics saying install for install.

how is it that u run too servers on the one pc i have tried to give people installs by using download from url and by send the file to the victims pc and running it as admin but nothing seems to work !

bum last try for me with this topic !

???c? - *October 29, 2010, 5:21 pm*

Just tell your friend to upload his server and you download it and send it to your slave / run hidden.

Btw make sure the server is FUD

if it doesn't work, he didn't set up the server correctly, or he didn't port forward correctly, isn't your problem anyway ;)

Pedobear is right

if u get loads slaves u can sell xD x
