**** JIT Debugging ****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
```

</configuration>

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

There you click yes. Then it downloads.

J4mmy - October 28, 2010, 5:31 pm

It does not do anything for me. I waited 10 mins to see that if it just starts a bit later but it did not work at all ./ Any other suggestions?

hipio - October 29, 2010, 2:00 am

Shitcash added a new securty so it isn't working anymore.

Sucks??

YEAH LIKE HELL

King James - October 29, 2010, 2:59 am

So it doesn't work anymore.

Damn. If Shitcash spent as much time fixing their bugs instead of fixing stuff like this Shitcash wouldn't be so bad.

watcha mean by that? ?

Pulse? - October 30, 2010, 7:36 am

Meaning , everyone has a brain and power. If they use it good enough; they can will be able to make a program of some sort tricking \$harecash, making us all have all the same IPs. But it only appears to the \$harecash website.

Well, just a thought. I don't know if anyone can actually do that. But we ARE.. hackers. We have ability to do the unexpected.

iQosmo - *October 30, 2010, 7:42 am*

Cool man thank's. You should add some color's and thing's to it.

Pulse? - *October 31, 2010, 9:18 am*

People can do the unexpected with the power of a brain.
