Thread: [Strange thread error!](#)

ariton - October 30, 2010, 5:15 am

When I click any thread (except my threads), I get this error:

The specified thread does not exist.
Any help?

I got this error yesterday, when the forum was lagging.

I'm getting the same error for most threads.

It works fine here, i can view your thread, and some others too.

Perhaps you should clear your cache and cookies and try again.

Any help?It's database error as Omniscient has been defined it. He was saying about Queries and so. Don't worry. It will appear after some minutes.
