Thread: [\[C#\] Simple Udp Flood.](#) [\[Source\]](#)

Local Celeb - October 30, 2010, 12:00 pm

This is a very VERY simple class I put together in the time I was bored.

You can make this far more advanced if you please, you can do anything you want to this really. Just make sure to give me credits :)

This can easily be used with some multi threading, it's designed to be compatible for that.

Swag. - December 18, 2010, 1:25 pm

cool stuff bro keep it up :)

MouldyVagina - June 6, 2011, 12:37 pm

How do you run this program anyway?

HakkuR - June 7, 2011, 5:55 pm

Where is the download link to your source?

NExtliFE - June 7, 2011, 5:57 pm

Sorry, but I believe this is C&P'ed from VB.NET to C#. :/

Indeed this does hit hard if there is multiple attackers or multiple threads using this.

This hits hard? Is that a joke?

NExtliFE - June 7, 2011, 6:20 pm

No. Using many threads(tons of them) for DoSing causing multiple connections to rise upon the victim with a dynamic range of data that continues to grow in size. <3

Sorry, but I use this with 400 threads. Guess what? I lagged a 30Mbps download speed with a 150kbps upload speed.

Got to love multi-threading. If you want proof I have a DoSer in the Hack Tools section that uses this method.

Local Celeb - June 7, 2011, 6:29 pm

Wow, this is one of my oldest threads. I didn't Translate by the way... I had this snippet from an old botnet I made.

Also, this doesn't even hit hard.

You DoSed yourself ??????

asdasd123 - June 28, 2011, 11:28 am

hi , how can i do this for works in my computer?
