Thread: [Whats wrong with this code...? \(one line code, please help\)](#)

L3g1tWa5te - October 31, 2010, 12:29 pm

```
Code System.Diagnostics.Process.Start("mbam.exe /update")
```

It keeps on saying its wrong when I can simply run it from the Run menu, but I can't do it in VB. Now thats just messed up. Can someone tell me whats wrong? I am trying to add a parameter! Something I am missing?...??

Its suppose to Update Mbam.

Regards,
L3g1tWa5te

```
Code System.Diagnostics.Process.Start(Chr(34) + "mbam.exe /update" + Chr(34))  
Maybe?
```

Maybe?

Ill try it, thanks for the response....

What error do you get?

Try copy / pasting these (try each one not sure but worth a shot!)

```
Code System.Diagnostics.Process.Start("mbam.exe/update")
```

```
Code System.Diagnostics.Process.Start(mbam.exe /update) (this this will work)
```

OR try to declare mbam.exe / update first.

E.G.

Dim mbam as mbam.exe /update

```

OR try to declare mbam.exe / update first.

E.G.

Dim mbam as mbam.exe /update

Failcode.

```
Dim MBAM As String = "C:\Path\To\mbam.exe /update"  
Shell(MBAM)
```

(Oct 31, 2010 01:51 PM)StarZ Wrote: [\[CITE\]](#) Failcode.

Dim MBAM As String = "C:\Path\To\mbam.exe /update"

Shell(MBAM)I have been coding in VB for about two days, please do give me a break.

Regardless, I was on the right tracks.

correction u been copying and pasting

DatGuyYo - October 31, 2010, 2:31 pm

Code Dim Proc As New Process

Proc.StartInfo.Arguments = "/update"

Proc.StartInfo.FileName = "C:\XXX\XXX\mbam.exe"

Proc.Start()

If that does not work. PM me, I will assist you further.

L3g1tWa5te - November 20, 2010, 2:54 pm

it works, thanks StarZ

tooshawty

xSilent - November 20, 2010, 2:58 pm

Code Process.Start("Whatever\mbam.exe", "/update")
