[Coming Soon] DarkSnake DDoSer v1.0 [Coming Soon]

Hello, I present my ddoser, coded in Delphi7.
a simple but very powerful ddoser, with 20 computer zombies.
I crashed the connection of someone for more than a day.
it works for everything, game server, website, home connection, ...
For stability, it is stable but we improve by adding the persistence.
I will get sold in a few days, but I'm still working in it is not finished at 100%
prices will be 15\$ maximum and 10\$ minimum. only by paypal.

boogiebear - October 31, 2010, 6:15 pm

looks very nice, anything other than a ddoser tho?
and what about stability?

Morse Code - October 31, 2010, 7:45 pm

What ports do you forward to use this?

Supreme Kai - October 31, 2010, 11:52 pm

What ports does it use ?

And you should add upnp for people that cannot port forward like me.

.Dream. - November 1, 2010, 2:26 am

For stability, it is stable but we improve by adding the persistence.
that connects your zombies you have to open a port on your router. (You Choose The Port)

ports for ddosing all that is normal, port: 80 home connection, port: 21 web site (teamspeak too) for the game servers you have to put the server port of the game...

Shannon R. - November 1, 2010, 2:32 am

That looks very nice, the GUI is very sleek.

Zeon - November 1, 2010, 3:33 am

I would buy this if it didn't require port forwarding (my ISP doesn't let me open ports). Any chance of a web based version coming out? I'm sure many people would buy it.

Fdisk - November 1, 2010, 3:59 am

Design is so good man. GG

Supreme Kai - November 1, 2010, 6:44 am

You should add upnp.

Please

YYou still owe me 350\$, please refund me... :/ I know you refunded others..

I paid you with matt121698@gmail.com, with 350\$ for 2 iphone 4s. You refunded others, but me.
Please refund me.... You know exactly what i'm talking about.

Why'd you negative rep me?

If i could buy it, i would.

The GUI is convincing. But i can't judge a book by it's cover.
