Thread: [\[Captcha\]Captcha + Encrypt/Decrypt](#)

**BaussHacker** - November 1, 2010, 3:45 am

Well it works like this.

You get an encrypted text, then you decrypt it to get the captcha.

Im not gonna give this to anybody, is only show off.

I don't want the agr. to be given away ! :)<3

Here is a video preview!

<http://www.youtube.com/watch?v=iSG3eEEI3YI>

Why is this a good captcha?

Can't be cracked without ur cracking the algo. for the encryption/decryption.

You have to decrypt the captcha to find out what it is :)

**S!rk0** - November 1, 2010, 4:55 am

This is not Captcha, it's a security code encrypted, you need to decrypt them and you can use them !

It's a random code ?

**BaussHacker** - November 1, 2010, 5:09 am

is always random., wich makes it a captcha.

3 tries or program close.

(Not the encrypted, this is after decrypt)

First run:

Captcha:

cDFAfC-1225967932WiYfg-553726018AfG-2089615920OslfFG0

Second run:

Captcha:

cDFAfC1409628551WiYfg1872264244AfG-713869781OslfFG0

see anything same?

lets try again and see a third:

Captcha:

AfCAfC-300507867

**JohnWayne** - November 1, 2010, 9:45 am

And where is the code? :P

**BaussHacker** - November 1, 2010, 9:46 am

Im not gonna give. I will keep the algo for my self.

It was just a show off.
