Thread: [\[TuT\] How to Set-Up CyberGate RAT \[No-IP + Portforward + Spreading Guide\]](#)

ariton - November 4, 2010, 3:10 pm

[TuT] How to Set-Up CyberGate RAT [No-IP + Portforward + Spreading Guide]

Step 1: Portforward

1. Open Start, then go to CMD (Type cmd on Run if you're using Win XP).
2. On Command Prompt (CMD) type ipConfig.
3. A list of IPs will appear. Copy the Default Gateway IP in your browser, then click Go!
4. A page will appear and it will ask you for username and password.
5. Now type the following as an username and password:

Code user admin pass admin

user admin pass blank

user blank pass admin

user admin pass root6. Now go to settings, and portforward. Don't know how to portforward Please listen the next steps.

7. So... you don't know the setting of your router, right? No need to worry, go to

<http://portforward.com>

8. Then, go to Router List.

9. Search for your router's name. Click Ctrl + F and then click your router's name (mark).

10. You will be directed to your router's page. Click your router's name.

11. A list with applications (games, programs etc), will appear.

12. If you want to portforward for (example Turkojan RAT) click it. If not, click a random application.

13. Then, a page will appear telling you exactly "How to Portforward your router".

14. It isn't finished yet. Do all the steps as shown, portforward a port.

15. When finished portforwarding, please go to <http://canyouseeme.org> and type your port's number to test if it's open.

16. If the port is opened, you'll get a success message, and if not, you'll get an error message.

17. If you get the error message, please refresh the page couple times and try again.

18. Some router's, example my router needs to portforward twice for the same port (Both TCP and UDP).

19. If your router was the same settings, portforward twice as TCP and other time as UDP, then test your port again.

20. If isn't working again, please portforward one of the following ports: 80, 100, 50, 125, 135, 200, 1337 (1337 is a dangerous port, so forward it at your own risk).

It's all done with Portforwarding (PF).

Now let's proceed at the Step 2; No-IP.

Step 2: No-IP

Every RAT needs a host, so we'll chose No-IP this time, because it is more stable and it is widely used.

1. Go to <http://no-ip.com> and do the next steps as shown at the image.
 2. Spoiler ([Click to View](http://img600.imageshack.us/img600/7548/noip.jpg))<http://img600.imageshack.us/img600/7548/noip.jpg>
 3. After downloading, save the No-IP, then install it.
 4. Great, now create a No-IP DUC shortcut at your desktop.
 5. Now, go back here: <http://no-ip.com>
- Do what the images will order you:

<http://img181.imageshack.us/img181/7548/noip.jpg>

<http://img833.imageshack.us/img833/7826/noip3.jpg>

<http://img822.imageshack.us/img822/2069/noip4.jpg>

Click the yellow highlighted button(s).

6. Now, Login into your No-IP account and please do what the following images will tell you:

[IMG]<http://img225.imageshack.us/img225/1231/n00bz0r.jpg>[/IMG]

[IMG]<http://img827.imageshack.us/img827/407/b00bz.jpg>[/IMG]

The text isn't enough readable, but you can read it, anyway ;)!

7. Now, your account and your hosting are both completed. Run No-IP DUC that you've previously downloaded and installed.
8. Login in your account in the No-IP DUC Client, and then click select hosts! Just like this:
[IMG]<http://img833.imageshack.us/img833/6205/dw00t.jpg>[/IMG]
It's all done with No-IP, just after clicking select hosts, check [V]Yourhost, then click save.

Step 3: Setting-Up CyberGate RAT

1. First of all, if you don't have CyberGate RAT, you can download a public copy [here](#).
 2. The RAT needs to be extracted after being downloaded. WinRAR is shareware, so we'll download [7-Zip](#).
 3. So... download both CyberGate and 7-Zip, and then extract CyberGate at your desktop. Install 7-Zip, so you can extract CyberGate there.
Note!: Make sure that No-IP DUC is running. You'll need to keep it running No-IP ALWAYS before you're running CyberGate.
 4. Open CyberGate RAT from your desktop.
 5. Click I Agree!
- Please follow the instructions as on the next images:

[IMG]<http://img72.imageshack.us/img72/509/asdasdsq.png>[/IMG]

Not the best image here, my little brother made it with paint and my little help ;)

[IMG]<http://img812.imageshack.us/img812/4499/palldave.jpg>[/IMG]

6. At the blue line type the port number that you've previously forwarded and click the blue arrow.
7. Connection Limit: Maximum Victims that you could have, default one is 200, but I think it's a little number, so feel free to increase it :D!
8. Connection Password: Type a password, and remember it. Click Show Password and the

password will appear (yourpassword instead of **).

9. When finished, click Save!

10. Now, go to Control Center > Builder > Create server.

[IMG]<http://img219.imageshack.us/img219/5232/123du.jpg>[/IMG]

Click New, then enter your name, then click Ok. Now click your name, and click Forward.

[IMG]<http://img51.imageshack.us/img51/6482/25699420.jpg>[/IMG]

11. Delete the 127.0.0.1 with the port 80.

Now click add, and add your No-IP host name and your open port, in my example:

Code aritonrat.no-ip.biz:1337Now, let's proceed with Installation step.

[IMG]<http://img836.imageshack.us/img836/8850/dava.jpg>[/IMG]

12. Installation Directory: Windows (You can chose whatever you like, but I recommend %WinDir\$.

Click Mutex Random 5-10 times and Active Setup Random couple times.

Check all as shown at the image with yellow colour.

We'll skip Message and Keylogger, because we won't need them. Message is for skids (;.

[IMG]<http://img530.imageshack.us/img530/4685/dava3.jpg>[/IMG]

Check all of them as shown at the image. If you want to test your server at yourself, please do not check Anti Sandboxie.

Good, let's proceed in the last step, now. Creating the server...

[IMG]<http://img529.imageshack.us/img529/7606/1233a.jpg>[/IMG]

Do what the image says, please. Check Use Icon and Google Chrome Passwords. Many users use Google Chrome, so stealing their passwords would be great. Tick it! Delayed execution: Tick is also. Now, it's done. Click server and save your Un-Binded and Un-FUDED server.

Step 4: Spreading your server

So, you want victims now. You're very thirsty, lol.

Your server is Un-FUDED. You can also spread with UNFUDED server, but you'll get a small number of victims. You'll get many victims if you follow my spreading guide with FUDED server. By the way, if you're l33t/ub3r and your server is unfuded, you can request your server to be FUDED [here](#).

So, let's start now with the spreading guide.

If you want more victims, you'll need to have a FUD server... You'll get more victims if you have more time and if you're more genius.

Here I'll teach you how to spread via torrent.

This is what you'll need to have:

+Server FUD'ed

+Good binder and compatabile (I recommend crypter + binder in one)

So that's all what you need. The second is to hear the next steps.

Spreading via torrent is easy, but you'll have to upload something that people really need. Let's say for example Nero Pack 9, or Photoshop Full version. Things that are very expensive and people are

very interested to get them for free.

Okay, so if at the first, you'll need to find a torrent – popular torrent, I mean very popular torrent, lol.

This is a site where you can find the most popular torrents: <http://#.org/top/all>

Other way is to visit a site like: www.torrentman.com and see the most searched things. The better way is to download a keygen because it takes less space from your internet and it goes pretty fast.

However, you can do what you want. So download a torrent, bind it with your server and then upload it again. Upload it to #, more traffic is there.

Remember it to test it in novirusthanks to be sure that your server is crypted 100% FUD. If it's Fud, it'll be 0/.... And remember to save the virus scan (the link of the scan) to a notepad file. You'll need the scan later.

Some other known torrent sites:

+KickAssTorrent

+BtJunkie

+Demonoid (You'll need an invitation for there, because it's a private torrent provider 'n' tracker.

+IsoHunt

You can find even more torrent providers just google.com and type torrent and you'll get many torrent sites.

Now, upload your torrent and here are some useful tracker to keep your torrent

going:<http://open.tracker.#.org/announce>

<http://open.tracker.#.org/announce>

<http://www.torrent-downloads.to:2710/announce>

<http://open.tracker.#.org/announce>

<http://www.sumotracker.com/announce>

That's all now. Just don't forget to leave your RAT open, you'll gain 200-300 per day (As I get)

Upload more binded files to get even more victims and you're in the game. This is all. Now let's proceed to the next step of spreading.

And something that should be useful: To make your file more trustable to downloaders, it's better to post a virus scan @program info and say the details like this:

It requires 2GB RAM, 15free GB of your HDD and etc. The people will think that's real and they will download your file.

The method is slow, but you'll get adults/pedos/lesbians and that kind of people, lol. I personally like this method, even if it's slow, because you can get girls with big boobies. You can open their camera in your RAT client as I do it. So let's start begin.

You'll need to join an adult chatroom at the first.

www.chat-avenue.com

www.javachatrooms.com

www.omegle.com This is 1 n 1 chat.

I don't know many chatrooms, but you can visit hackforums eWhoring section to get more chatroom sites like these, or the best way is to google and you're done.

Before that, upload your RAT to a freefile hosting, but you'll get more victims if you upload your file to a direct hosting, like Spam.com. That means that once the victim clicks the link, the download will begin automatically without clicking download or something else.

Okey, so join a chatroom from there or from the googled ones, and type like this: "Female from USA 17 years old blonde hair wanna see my boobs and videos?, check this < your link here >, if you want women victims you'll type like this: "20 years beautiful man or Justin Bieber photos check this <your link here>.

You can also do this: "Add my MSN <your MSN here> and see my boobs. After a minute, 100 people will add you, give the link of your RAT to all of your victims. You'll get more victims this way.

That's all with ChatRoom Spreading. Now let's proceed with the next step, wich is Forum Spreading.

Forum spreading... You'll get more steam account this way, garena accounts, Runescape, minecraft, WOW, and account like this. This way is also good, and after all it's easy. Remember to always spread of Gaming Forums like seven7ensins. It's well knows gaming forum, you'll get many xBL accounts from there. Do not spread in a hacking forum, you'll fail.

So, crypt your RAT and bind it if you like to bind it, and upload it in a direct link saying: "CS:S Undetected Wall-Hack, or Mw2 online trainer hax hack or something like that".

Go to a gaming forum and start spamming all the forum places with this text:

"Coolest wallhack ever, includes AimBot the best here is the virus scan <link of FUED RAT remove the Md5 hash> and here is the mighty link <your direct link here>. If you have any problems setting-up the cheat contact me here <fake msn to make fool of the gammers, lol>

You'll get 50-100 victims per day. If you don't quit forum spreading, you can get up to 1,000 victims per day.

And remember to unverify the steam account that you've hacked, lol.

Hope you understood this method, actually it's pretty easy and after all it's fun making fools of gamming little n00bish kids.

Now let's proceed to a method that is great for hacking your friends.

I can't gurantee 100% work with this method, but however it's a great trick and you can hack your friends with this one. This method will work even better if you're Social Engineer'ing master. So good luck with this method and listen the next steps.

Okay, so at the first make an account @passport.net.

Passport.net is an interesting site. You can make e-mails like this: yourtext@youcantypeheretoo.de/com or other ones.

But, now no funny business, we'll make an e-mail like this RemoveVirus@Microsoftinfo.com or something like Microsoft.com, info.com. Just make it that well for your friends to belive it. Now create the MSN, using fake info. Then, login to this MSN through eBuddy and login to your MSN using MSN Client. Copy all your MSN contacts to that the new-created MSN account and close your MSN. Sign in to the new MSN through MSN client.

And, say the following message to your friends:

<You're hacked. Please download this file to remove this infection>. But if you know perfect SE, you'll make that message better and trying to make the victims belive you. That's all with this method. Hope you've hacked many friends' facebook's and make fun of them by deleting all their photos and put some porn on their avatars, lol. It's funny to me.

Ok, now let's proceed to the next method that explains how to spread through youtube. Easy as HELL!

Okay, so here I'll tell you how to spread via YouTube, actually I'll tell you 2 methods in spreading via YouTube.

Ok, let's hear the first method wich is the easiest method <><>EVER<><>.

Here is what you'll have to do. At the first, go to youtube.com and go to to Videos > Most Viewed > All time. Click comment and type <Photos of Justin Bieber>, <Photoshop crack v5 <the link here> or something else and then post the comment. You can also post the link of your YouTube video, wich I'll tell you how to create it shortly and how to trick the victims. (I could not make hole Youtube spreading guide, beucase it says message too long).

You'll need to make a facebook account. The account must be young girl. Put a name like Jessica, then use the facebook search button to find a beautiful girl. Copy all the girl's photo's to your facebook account. The people will think that you are the real girl. Try to add as much boys as you can on facebook. Once you made the friends, PM them all on facebook like this: "Wanna see me naked/my tits? Check this out <your binded server here>.

The another facebook method is to type the same message at facebook fanpages wich have more than 10,000. You'll get many installs from this method.

Ok, so here is the 2nd method of YouTube spreading. The first one was very easy, this is also easy, but it is a little bit harder than the first one.

For this one, you'll need to download CamStudio www.camstudio.org it's a free video recording software. If you have better ones than CamStudi, then don't download it. Then, download a fake key generator that generater fake keys, or you can make yourself one from VB.NET if you're a good coder. You can also follow a tutorial to that "How to make fake programs". And while recording the video, you'll open the fake program and the people with think that the program is real and it generates real keys. I recommend you all to download fake program Windows 7 Genuine Key generator x32/x64, Steam game cracker/CDkey cracker to trick the YouTube people. After making the video, just bind the fake program to your server, file and upload it. Remember that you can upload it to sharecash, dengee or foxlinx. You'll earn money too.

Also, there are more services around Hackforum that will rate your video, comment on your video etc. This will make your video more trust-looking video and you'll get more victims. That's all.

thesnipair.24 - November 4, 2010, 3:13 pm

woow really nice and aweresome tutorial ... tHANKS but i used albertino rats it work well.. still thanks

ariton - November 4, 2010, 3:19 pm

(Nov 4, 2010 03:13 PM)ash mafiaboy Wrote: [\[CITE\]](#) woow really nice and aweresome tutorial ... tHANKS but i used albertino rats it work well.. still thanks

However, you can still follow my spreading guide if you want to get more victims.

Unreality - November 4, 2010, 3:24 pm

Nice tut, but there's about a zillion of these out there, I'm just saying :P

BTW, its probably better if you put the pics in spoilers so you don't piss some people off.

ariton - November 5, 2010, 3:33 am

I've alredy removed some images, you can access them by clicking the links.

45 views and only 4 comments? It took me too much to write this tutorial, so a Thank You won't hurt!

Punjabiuploader - November 5, 2010, 3:40 am

nice tutorial

thanks for sharing

here on hf there are a lot of people who pays to setup cybergate i think this tutorial is best tutorial for them :P

ariton - November 5, 2010, 3:40 am

Sorry guys, I can't edit the post becuase it says message is too big, please enter a shorter message. Anyway, I'll edit some images right now and I'll update the post.

Punjabiuploader - November 5, 2010, 4:04 am

its okey all can understand by this present tutorial too

CATMAN - November 5, 2010, 4:04 am

Yes, I'll be happy to hear some feedback!

ariton - November 6, 2010, 2:59 am

Nobody likes my tutorial? No thanks?

Plutonium - November 6, 2010, 3:26 am

/Sigh.

Once again, there IS already a tutorial for this. A STICKIED one. Why make another?

christiano - November 8, 2010, 2:40 am

Nice tutorial

thanks

i just needed this kinda stuff as i m new u rats

Shannon R. - November 8, 2010, 2:40 am

Nice and detailed tutorial, well done.

ariton - November 8, 2010, 5:09 am

Daftwood - November 12, 2010, 4:27 pm

Thanks for the guide. Since im totally new to the hacking scene i hope this program + guide will increase my hunger for hacking. I've got a question, how easy is it to trace the intrusion back to me? Do i need to get a secure VPN service going or can I safely sit here on my normal internet connection and play?

james1992e - August 1, 2011, 2:32 pm

not going to lie dude this is probably the BEST tut ive seen on here (no disrespect to the other guys) but yours goes into alot of detail others wouldnt bother doing Thanks! :)

not going to lie dude this is probably the BEST tut ive seen on here (no disrespect to the other guys) but yours goes into alot of detail others wouldnt bother doing Thanks! :)

o0-0o - August 3, 2011, 4:19 pm

wow this one is impressive , i have not read the whole thing but its bookmarked! haha thanks

EastDrags - August 16, 2011, 1:47 am

im having a issue , when i put my default gateway in my browser , nothing comes up. pleasehelp!

The Coon - August 16, 2011, 2:06 am

Nice tutorial but I need help. I have done exactly as you have shown aswell as following other tutorials on this but whenever my installs restart their computer, I lose them completely.

noumankayani - August 16, 2011, 3:22 am

thanks for sharing but i dont think so its gonna work :)

e1337unk - September 1, 2011, 9:34 am

Wow O.O Of most of the tutorials I've been browsing through this one is by far the best! It has so much detail (:

Thank you for compiling it! Really helps (:

tears - September 1, 2011, 9:59 am

its okey all can understand by this present tutorial too

Wheelz - September 1, 2011, 9:29 pm

Hey man, really nice tutorial, it has helped alot, also I noticed you were Albanian, so am I! :D

hamradiomobile - September 1, 2011, 11:21 pm

great tut I have subscribed and will follow :) thanks a lot :)

iPhatKiD - September 9, 2011, 7:59 am

Nice rat dude, and tutorial you should do more!

FANB?Y - September 9, 2011, 8:07 am

nice work buddy ! keep it good ! :)

Africanov - September 11, 2011, 10:47 am

portforwarding question...

I got a netgear router, and when I go to my Default Gateway I get this error:

Important Update

To avoid a conflict with your Internet Service Provider, your router's IP address has been updated to 10.0.0.1.

You must now update the IP addresses in your router's configuration settings for each relevant service, such as port forwarding and IP address reservation.

any help?

hotboi1122 - November 26, 2011, 12:45 pm

Thank s dude, the tutorials is awesome. Keep up the good work

styrke - November 26, 2011, 3:18 pm

Nice tutorial very helpful thank you !

leonsb1 - November 26, 2011, 5:52 pm

Very nice tutorial, but I have a question on this one.. Actualy a problem, I do everything as tutorials says. When I create a server, an .exe file appears on my desktop I click on it and it pop's up an error for me. It says that mozsqlite3.dll was not found. PM with the soultion of the problem.

Euphorique - November 26, 2011, 6:26 pm

Hi, thanks you for your spreading system i take note :)

leonsb1 - December 5, 2011, 2:11 pm

Could you help me with my problem, please?

ariton - December 6, 2011, 3:07 am

(Nov 26, 2011 06:52 PM)leonsb1 Wrote: [\[CITE\]](#) Very nice tutorial, but I have a question on this one.. Actualy a problem, I do everything as tutorials says. When I create a server, an .exe file appears on my desktop I click on it and it pop's up an error for me. It says that mozsqlite3.dll was not found. PM with the soultion of the problem.

Just google mozsqite3.dll, download it and then place it in your system32.

But don't try to RAT your own PC, perhaps run it in a sandboxie.

Rock3r™ - December 6, 2011, 8:48 am

Nice spreading method bro really helpful.

Semtex - December 6, 2011, 9:13 am

Nice :D Really Cool Tutorial! :D:D:D

ariton - December 6, 2011, 11:50 am

Glad you like it guys, it's a little bit old, but the spreading tut could do.

hcgl - December 6, 2011, 2:34 pm

Much easier than i thought, awesome tutorial :D :D

FlyingWings - December 8, 2011, 1:32 am

Awesome tuttorial my friend :D OLD but GOLD ! vouch for you.

OillyDBG.exe - December 8, 2011, 1:56 am

Nice TUtorails i hope i can do this

BaMBuS - December 8, 2011, 4:58 am

Good job brother keep making tutorials like this :) pozzzz care

iloveSara - March 30, 2012, 3:26 pm

Thank you man! This is a GREAT tutorial! I bookmarked this page lol :P

A question though, I wasn't able to retrieve the default Gateway IP in CMD. Why is this?

19AEoM96 - March 30, 2012, 4:03 pm

wow a tutorial that gave me great help Thx Dude ?

johny13 - April 6, 2012, 5:12 pm

Vey usefull, helped a lot , but I've a question , if i'm using another wireless wich is not mine (eg.neighbour network) Will this afect him or slow him down, or make any kind of harm ?

Thanks in advance.

Btw sorry for english (its not my ofical language)

rocksy78 - May 29, 2012, 5:24 am

Thank you very much mate! I have to try your ideas!

TBS.TheCyber - May 29, 2012, 5:47 am

Legit tutorial for beginners, nice work !

SIM-553562 - May 29, 2012, 6:03 am

You should add that before you check if your port is open you should have already opened the CyberGate and listening in this port.

You should add that before you check if the port is open you should have already opened the RAT and configured listening this port.

VaMpZz - June 3, 2012, 9:12 pm

How can I make my victims connect to my hostbooter client?

manual calais - July 21, 2012, 4:13 pm

good tutorial mate, its hard to find a good free binder/cryper though

Ncredible - July 21, 2012, 7:21 pm

Very nice tutorial bro I will try this after I download cyber gate.

Omarion - July 22, 2012, 5:33 am

Thank you for creating such incredible guide/tutorial. Wishes and regards, Omarion.

Thank you for creating such incredible guide/tutorial. Wishes and regards, Omarion.

Aceofgames - August 5, 2012, 2:43 pm

ok when ever i try to download cybergate it says on the website website not available

messaoud19 - August 6, 2012, 4:38 pm

that was amazing tutorial ,thanks for this !!

PosionAvy - August 9, 2012, 8:58 pm

The Link for cybergate doesn't work. Is there a place i can get a clean version

Digitalized - August 9, 2012, 10:48 pm

thanks for this tut it really helped when checking out cybergate.

-Anonymous- - August 10, 2012, 12:02 am

thanks man helped me out a lot great tut

getowned - August 10, 2012, 3:18 am

Nice guide thanks alot man good for newbies

ckline3969 - August 23, 2012, 6:39 pm

Not bad man. Still trying to find a site that is like file ave

Breis96 - August 23, 2012, 6:43 pm

Goood stuff keep up the work dude good Jobb!!

Goood stuff keep up the work dude good Jobb!!

Young Boss - August 23, 2012, 7:20 pm

Thanks for the tutorial man, it really helps a lot. You're so HQ.

emile - August 23, 2012, 7:52 pm

the link to cybergate is dead.

could you give me another link to download it?

Thanks for the tutorial

twich - August 31, 2012, 8:01 am

i have i question can i do this on a home wifi whitout effekting other users ??

Limitlez - August 31, 2012, 8:05 am

Nice tutorial. Im gona see if i can make one

mr twitchz x d - August 31, 2012, 6:57 pm

great guide 10/10 mate one of the best ones out there

Imbabyaxis - September 4, 2012, 10:47 am

Thanks Alot! This has helped me so much! Everything is working fine!

zapfen - September 8, 2012, 2:38 am

Veryy awsome tutorial Thanks for making this Guide and sharing it ;-)

LevelUp - September 16, 2012, 4:30 am

Really helpful tutorial, especially the spreading methods, thanks alot!!!

MrLamp - March 6, 2013, 3:12 pm

i cant'tportforward i am trying my best using difrent ports difrents settings end all that stuff but still no succes im on my laptop end there is another 2 pc's maybe its the problem i dont realy know if any1 could help me true teamvieuwer that would be great!!

tatiana - September 30, 2013, 9:08 am

anyone know how to set up leagcy link to no-ip

xSharkie - October 1, 2013, 10:16 am

Thanks maate that was verry helpfull

pk864 - October 15, 2013, 9:44 am

nice tut bro...can you suggest some more sites like spam.com....for direct downloading

hacksmack - January 5, 2014, 2:24 am

Great tutorial! Im a noob and this was very helpful!

Migael - January 5, 2014, 9:01 am

Does this work on Mac OS X?

35 chars..

Diggydog - August 20, 2014, 12:26 pm

Tnx you,im new to this and im still learning to rats and that stuff

Phil Program - November 17, 2014, 2:53 am

I really like this guide and I am very excited to put it to the test...I just had a couple questions.

1. When setting up on Mac OS X, I assume it is the same thing? However, if I want to create the .exe and send it, I hope it won't be a problem?
2. Are there good free alternatives to those programs for Mac?
3. Also, let's say I do get succesfull infects - when I shut off my Mac, and power it back on, will I still have a succesfull connect to them?

LynS - November 17, 2014, 8:45 am

Thanks for The Tutorial Might Help Me In The Future !

?Syria - November 17, 2014, 3:27 pm

(Nov 4, 2010 03:19 PM)ariton Wrote: [\[CITE\]](#) However, you can still follow my spreading guide if you want to get more victims.

Hello I have a question is the rat you gave us to download a rat it's self to get us to and ddoes it have a virus that will harm my pc?

Kakuzu® - November 18, 2014, 12:23 pm

Brilliant tutorial dude! It will surely help out some new users.

Check out my signature it guarantees 1-5k installs/day . There is a 50% off sale on at the moment, get it while you still can!

TetraHC - January 25, 2016, 3:40 pm

Can this still be used?? or do i need to keep looking for a clean dc...

L33tness - April 12, 2016, 1:28 am

Thanks for this useful info! Is there another website like passport.net? i believe it is down.

hackforums021 - April 13, 2016, 1:45 am

I think cyber hate rat is the best .

L33tness - April 13, 2016, 2:11 am

Cyber hate ??? Ohhhh . Im rolling. ?

webcheat97 - June 20, 2016, 4:33 am

wow so grateful... It's incredible keep on the good job bro

bananenkot - June 20, 2016, 4:34 am

nice tutorial

thanks for sharing

joshwezzy - June 20, 2016, 5:48 am

this one too make me happy. I vouch him becos this is a good product. yes buy it

saisrujan - June 22, 2016, 12:08 pm

nice tut but no pics it would be much better if pics are active

temp_1103266 - June 22, 2016, 12:41 pm

Great guide, thanks for taking your time.

chrisjo - June 23, 2016, 7:22 pm

nice tutorial, keep up the good work

AldocMoth - June 24, 2016, 11:02 am

great tutorial im about to go try it now

ugurdebeste - June 24, 2016, 5:54 pm

Download link don't work mayne.

041798 - June 29, 2016, 7:57 pm

I know I'm late, but thank you
