[TuT] Installing Tor on your iPhone/iPod

Just wanted to write a quick guide, so I can start contributing quickly, I've been lurking this board for a while under a different name.

So, here we go, Installing Tor on your iPhone!

First off, download these packages and save them somewhere.

<http://adf.ly/B7u0>

<http://adf.ly/B7u4>

<http://adf.ly/B7u5>

<http://adf.ly/B7u9>

Now, connect to your iPhone using a SSH File Transfer client, like WinSCP or FileZilla (I'm assuming you all know how to do this, if you don't, post and I'll show you)

And navigate to `"/private/var/root/Media/Cydia/AutoInstall"`, and upload all four packages. (If you do not have this folder, make it)

Now open Cydia and search for "SBSettings", and install it. (If you already have it installed, you don't need to do this)

Then reboot your iPhone.

After thats done, go to:

Settings -> Wi-Fi -> (The arrow next to the network you're using) -> Scroll down and set HTTP Proxy to Manual, set Server to 127.0.0.1, set Port to 8118, and set Authentication to Off, then press the back button in the top left at least once to save the settings (It says "Wi-Fi Networks").

Now slide your finger across the status bar on the top of the screen to open SBSettings, and make sure that Tor is enabled (It will be red if disabled).

Now open Safari and go to check.torproject.org

If it says "Congratulations. You are using Tor." in green text, you have successfully installed Tor on your iPhone!

Happy Anonymous Browsing!

If anything goes wrong, just reply and I'll try to help you out.

What is Tor?:

What Tor is not: Tor WILL NOT give you free internet!! You MUST be connected to a WiFi network!

What Tor is: Tor connects to a P2P community network, encrypts your traffic, sends it to a

community ran server, and echos it.

For example, if you were to load "Google.com", the request would be encrypted, sent to a server that is being maintained by an individual, and then that person's server will request Google.com for you. It will then take in the response, and send it back to you.

The server will never disclose where the request originally came from.

Thus giving you 100% anonymous internet access.

:O thanks for your post dude!

It works with 4.x?

It works with 4.x?

Yes! I'm using it right now as I post this on 4.1

Reaper 666 - November 7, 2010, 6:49 am

Ok cool I will try. :)

Thanks

xUser - November 7, 2010, 7:21 am

It's not working for me. I think you need to upgrade the link.

#cn - November 7, 2010, 7:28 am

The repository doesn't exist. Replacement?

Stocking - November 7, 2010, 8:03 am

Ok, I'll try to get the actual packages, and I'll post those.

So you guys don't have to mess with the crappy repository...

Stocking - November 7, 2010, 11:03 am

Updated with packages, bypassing the repo.

Stocking - November 14, 2010, 3:39 pm

Updated the TuT again, if you found it useful, please post!

Loka~ - November 14, 2010, 4:55 pm

Nice tut, I've heard a lot of pedos use hidden tor sites to watch CP.

Stocking - November 14, 2010, 7:55 pm

Tor isn't a "site", it's a giant community-ran proxy service. It's great if you live behind the Great Firewall Of China.

yoyo2u2 - February 9, 2011, 5:42 am

its not working, i think i need something called polipo. care to upload it? :D

PiraX - February 9, 2011, 5:44 am

This isn't working for me either. I uploaded all of the packages to the AutoInstall directory, made sure Tor was enabled, changed my proxy settings, and it says there was an HTTP error anytime I try to use Safari.

I uploaded all of the packages to the AutoInstall directory, made sure Tor was enabled, changed my proxy settings, and it says there was an HTTP error anytime I try to use Safari. Are you using the official Tor source on the torproject.org website?

Know Hope - February 9, 2011, 3:24 pm

Can I de-activate tor if I have it installed?

Shanghai - February 9, 2011, 3:50 pm

(Feb 9, 2011 04:24 PM)Karma™ Wrote: [\[CITE\]](#) Can I de-activate tor if I have it installed? It's a pain as of yet. You have to go to settings and erase the manual proxy settings AND click off the Tor toggle.

DetKimble911 - March 8, 2011, 6:27 pm

I'm not sure if this works anymore, I installed as directed. Internet won't load when I enable tor. I did install SB first though; would or could that be the error?

Nicely written, btw.

Yeah, this one installs properly and it's only 1 thing you need to d/l and install. The reason this original post doesn't work is because it relies on polipo (spelling?).

I haven't tested this out because I'm not around wifi, but I at least know I can install it from ^that post.
