Tree View

Okay, so recently I have been seeing a lot of webbrowsers being posted. Now, that is all fine and dandy, but hey! It gets a little old. This is a tutorial on how to implement a Tree View.

[IMG]http://i55.[censored].com/zm12wx.gif[/IMG]

This tutorial is going to be a little different. I am going to do it all on a GIF and explain it step by step.

Spoiler ([Click to View](#))

[IMG]http://i55.[censored].com/zm12wx.gif[/IMG]

- Create a TreeView Control.
- Create a New WebBrowser Control.
- Go to the mouse click event of the treeview nodes.
- Insert:

```
Code TreeNode site = e.Node; // New TreeNode. e.Node = clicked node
string url = string.Empty;
url = (string)site.Tag; // Accesses the tag that we setup "http://www.Google.com
webBrowser1.Navigate(url); // Navigates the browser
I hope this aims people toward being more creative in their browsers!
```

```
Code private void treeView1_NodeMouseClicked(object sender, TreeNodeMouseClickEventArgs e)
{
    TreeNode site = e.Node; // Sets up a new tree node object
    string url = string.Empty; // a new string variable
    url = (string)site.Tag;

    webBrowser1.Navigate(url); // navigates to the tag we setup earlier

    // Be sure to have it in the mouse click event
}
```

Interesting. You could kind of incorporate this into web browsers that are looking for a Bookmarking system.

Yup, you could implement this into anything really.

Nice. Now get their favicon and display as icon in treeview instead of + and -, that would look neat. :)
