Thread: [Doob IDE: Portable C# Compiler](#)

killerdoob420 - November 7, 2010, 2:05 pm

I know there are allot of portable .Net codedom compilers out there, but i though I would release mine anyway:

[img]<http://img225.imageshack.us/img225/3707/picture32.png>[img]

Features:

- Save.
- Save as.
- Open.
- Copy and paste.
- Edit font and color.
- Compile.
- Compile and run.
- Edit name , .Net version, target(console, form, dll), icon.
- Add/remove references.

Im also planning on adding multiple document support and basic syntax highlighting(just keywords and strings) and will release the source when I am finished.

Download:

<http://www.mediafire.com/?r0xprar3m5mwwrq>

Let me know you have any bugs or feature suggestions.

Is it set to use a environmental variable / certain path to access the .NET files?

Anyway, great release ;)

Yes, csc(c sharp compiler) automatically includes the .Net dll's in its path.

very nice mate. syntax highlighting would be a bitch if you had to do all the vars >.<

Make sure you highlight strings :o
