F-BOMB! v1.1 by Shockwave & Lewzor of L-S

What is it?

F-BOMB! is an SMS (Cell Phone) bomber packed full of advanced options none of the others offer! (It also happens to be my first new release since I got back into coding.)

What makes it so great?

I'm glad you asked! Here's an overview:DOES NOT use the obsolete Gmail Method!

Requires no email to use!

Can spoof sender! (Ex. make the text from admin@porn.org)

Can build a list of senders AND messages (each text sent will be from a randomly selected sender and have a random message to avoid the user seeing "Duplicate Message" in their inbox!)

If you DON'T know your victim's provider, use our look up tool to find it!

CAN BOMB MULTIPLE PHONES AT ONCE!

If you can't find your provider, you can enter your own custom providers! (Never have to worry about NOT being able to bomb a provider!)

Once you make a list of senders/messages, you can save them to a text document to be easily loaded again next time you use F-BOMB!

Structured log keeps you informed of exactly what you do, when you do it.

LOG CAN BE SAVED INTO HTML FORM IN A NEATLY ORGANIZED TABLE!

Option to minimize whilst bombing (displays a small balloon in your taskbar informing you of how many bombs sent!)

Texts are received almost INSTANTLY after being sent!!!!

Can we see it?

Of course!

ALSO NOTE: The images are from v1.0. v1.1 is the same GUI-wise, but we just had to change the method as the old one stopped working.

mad_cow - November 8, 2010, 5:05 pm

Question: Does it come with e-mails?

-How many texts / minute does it send?

-Can it send to multiple emails

-Does it detect providers?

Just a few features I'd like to know of.
