Quick Batch Example

Hello Hackforums, I threw together this neat little project to help people better understand things such as streamwriters and the Save File Dialog. However, it is also pretty handy to make batch files!

This program will generate several different things:

- Add to Startup
- Messages
- Pop-Ups
- Ping
- Program Startup
- Custom Batch

There are a few different forms, and it uses pretty simple methods to work. Hopefully it will help someone!

Onto the program

Hopefully someone gets some use out of this C# example

Damn bro, you're bringing you A game! This is a really fantastic idea... you mind if I extend it? I use batch so rarely that when I have to make a new login script or whatever, I end up searching through my old code library to remember how to create loops and other stuff in batch.

Thanks!

--EDIT--

I just noticed this thread is rated 1 star??? What the hell is up with that?

HotN - January 4, 2011, 8:36 pm

i donno if thats such a good idea..

sorta promotes skids, but at the time promotes people learning batch...

-VeX- - January 4, 2011, 9:06 pm

looks good bro! Gives me an idea for something to work on myself XD not that I'm trying to steal your idea, I just need something to work on, haha. Hope you dont mind

Looks good.Nice Job!Keep Coding amazing programmes!

Pulser - January 5, 2011, 8:45 am

This was really just a (I'm very bored) project.

lol
