Thread: [Speed Up Video Buffering](#)

HaxOr? - November 12, 2010, 8:51 am

THIS IS NOT MY TUTORIAL! FOUND IT ON WEB!

To speed up the buffering of online videos on all sites.

Steps:

- Code 1. Click on the Start Orb
2. Type > "system.ini" in the RUN box
3. Hit > "Enter"

After that you'll get system notepad file either the same as, or similar to this:

Code ; for 16-bit app support

[386Enh]

woafont=dosapp.fon

EGA80WOA.FON=EGA80WOA.FON

EGA40WOA.FON=EGA40WOA.FON

CGA80WOA.FON=CGA80WOA.FON

CGA40WOA.FON=CGA40WOA.FON

[drivers]

wave=mmdrv.dll

timer=timer.drv

[mci]

Make a backup named system\_backup.TXT and save it somewhere just in case, then add the following to the system.INI file before the [drivers] entry:

Code page buffer=100Tbps

load=100Tbps

download=100Tbps

save=100Tbps

back=100Tbps

search=100Tbps

sound=100Tbps

webcam=100Tbps

voice=100Tbps

faxmodemfast=100Tbps

update=100Tbps

So now your system.INI file should look something like this:

Code ; for 16-bit app support

[386Enh]

woafont=dosapp.fon

EGA80WOA.FON=EGA80WOA.FON

EGA40WOA.FON=EGA40WOA.FON

CGA80WOA.FON=CGA80WOA.FON  
CGA40WOA.FON=CGA40WOA.FON  
page buffer=100Tbps  
load=100Tbps  
download=100Tbps  
save=100Tbps  
back=100Tbps  
search=100Tbps  
sound=100Tbps  
webcam=100Tbps  
voice=100Tbps  
faxmodemfast=100Tbps  
update=100Tbps

[drivers]  
wave=mmdrv.dll  
timer=timer.drv

[mci]

You should now be able to avoid videos freezing part way through to buffer.

I have tried this on my system and it seems to make a difference, but I can't access youtube to check it out. I'd be interested in hearing your results if you try it....Enjoy ?

I think that's the reason...?

**Psychotic Overlord** - March 27, 2011, 1:55 am

IDK but when I am trying to save the file in Win 7 it says access denied.

**PhineasPhreak** - March 27, 2011, 3:03 am

Maybe it hasn't come to your attention but someone else posted this: Ruyuk. Quite a while back and it is also embedded in the HF archives...

But you didn't know that so nice share?

**Elektrik™** - March 27, 2011, 3:19 am

Yeah I am getting access denied also :(

Any Ideas??

**HaxOr?** - March 27, 2011, 10:34 am

Do you have Administrator rights?

**Frosty.** - March 27, 2011, 10:52 am

If you are getting access denied.

Right click notepad run as admin.

Then click file>Open> at the bottom right where it says "Text Documents (\*.txt)"

Click that then choose "All Files"

Then navigate to C:\Windows and then open the file that says "system"

Put in the changes in the first post and your done!

Also, this helped me alot thanks!

**14th** - June 8, 2011, 3:01 am

Question sir!?

What's the use of the back up?

Will the .ini file be damaged or does this trick has it's limitations?

Thanks for this anyway! ?

Well you back up .ini file if you by mistake edit something wrong ?

And thanks @all <3

This is pretty old thread.

Anyways you must be administrator to edit that file.
