Thread: [\[Release\] Guidtech \[Better then HWID\]\[WITH VB FILES!\]](#)

The-One - November 12, 2010, 12:40 pm

Hello,

NOTE: This kind of protection is used all over the game hacking scene, its the best protection available

If you having trouble with the login, read this:

Spoiler [\(Click to View\)](#)

There are two fixes, one:

Open up login.php, find the following line:

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5( md5( $salt ) . md5( $password ) );
```

replace it with:

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5($password);
```

now, you only have to encrypt it once(YOUR PASSWORD) then enter it in the database.

The second fix is way more secure, it uses hash>hash+salt.

You can just leave the

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5( md5( $salt ) . md5( $password ) );
```

Now, I know people are having trouble with getting the hash.

I made a little php script who generates the hash

login.php:

```
Code Option:<form method="POST" action="login2.php">
```

```
<SELECT NAME="Actions" SIZE="1">
```

```
<OPTION VALUE="1">Original
```

```
<OPTION VALUE="2">Modified
```

```
</SELECT>
```

```
<br>Password: <br>
```

```
<input type="text" name="password">
```

```
<br>Salt(Leave blank if NOT needed):<br>
```

```
<input type="text" name="salt"> <br><br>
```

```
<input type="submit" value="Generate">
```

```
</form>
```

login2.php:

```
Code <?php
```

```
$LOLx = $_POST[Actions];
```

```
if ($LOLx == 1) {
```

```
    $LOL = md5($_POST['password']);
```

```
    echo $LOL;
```

```
    exit; }
```

```
if ($LOLx == 2) {  
    $LOL2 = md5( md5( $_POST['salt'] ) . md5( $_POST['password'] ) );  
    echo $LOL2;  
    exit; }  
?>
```

Now, the Original selection will just hash the password once, like you need in the first method. The Modified selection will do it like hash > hash & salt.

The Original one will not use the salt and the modified one will require a salt, make sure you enter the salt in the database.

I saw some topics about GUIDtech (Globally Unique Identifier), I recently reinstalled my computer but I found some files I wrote a few months ago. It was creating for selling purposes but I decided to stop the project(Note that because of this lots of things aren't finished, also LOTS of thing could be done better and are bugged).

One of the files says it also contains a VB.Net (Can be used in every language that can make a web connection) example on how to use it, if you have read the above line you understand I don't have it anymore, but I explain you how it works:

- The user opens the program
- A web connection (No webbrowser) is established
- It will send a encrypted (md5) GUID to the server
- This will check if its appearing in the database and will check if its a valid customer or not.
- Then it will return a value, make it random so its harder to crack.
- Its using a database, which is almost impossible to get access to, (free) HWID system's are mostly using .txt files
- Pretty good alternative if you don't want to use HWID's

Crypting GUIDs:

- Get the customers GUID
- Encrypt this and encrypt the result again (IPB way) and encrypt that result again, store this into your database.

This GUIDtech can:

- Receive the GUID
- Receive the Username/Nickname (Used for forums)
- Receive the Package (Eg: Gold, Silver, Bronze)(Needs some work)
- Receive the Date the users license ends(Needs some work)
- Receive News
- Receive IP addresses
- Receive Version
- Receive Program name
- Receive the .exe's CRC (Prevention for running cracked .exe's) <-- You can find this code somewhere here on the forum

All of the above things are changable (for admins) on the webhost, simply go to www.yoursite.com, and you will be asked to login. Login with your details (Standard details are inside the .txt file of the .rar) and you can edit everything.

It contains all .php files, .sql file and the setup text.

As I don't have a webhost right now I can't post a image of it. So if someone wants to take a picture or make a demo it would be nice.

This was based on the Phatom Coding - Gaming GUIDtech.

Please post thanks or something nice.

Note that I posted this for free and will not help you with any problems.

Then post a screenie

drizzy_effect - November 12, 2010, 12:59 pm

Looks great im downloading Now cheers :p

skiiiz - November 12, 2010, 1:10 pm

Thank you!

I've been waiting for this for ages!

Zer0Fact0r - November 12, 2010, 1:58 pm

What the fuck?

[\[IMG\]http://img521.imageshack.us/img521/9928/boxe.th.jpg\[/IMG\]](http://img521.imageshack.us/img521/9928/boxe.th.jpg)

Why do you claim that this is the same thing as the software on guidtech.net? This is nothing close. It isn't even called iSafe...

The-One - November 12, 2010, 2:46 pm

(Nov 12, 2010 02:58 PM)Zer0Fact0r Wrote: [\[CITE\]](#) What the fuck?

[\[IMG\]http://img521.imageshack.us/img521/9928/boxe.th.jpg\[/IMG\]](http://img521.imageshack.us/img521/9928/boxe.th.jpg)

Why do you claim that this is the same thing as the software on guidtech.net? This is nothing close. It isn't even called iSafe...

If you have read my first post you would know I wasn't done with this project, I still needed to update things, fix things and change things. I also didn't know that domain was already taken. I forgot to took the picture out.

Velocity - November 13, 2010, 2:16 pm

OMFG I LOVE U SOOO MUCH!!! :O

I am fool - November 13, 2010, 2:22 pm

Someone re-upload, who use's rapidshit anymore.

Xer0x - November 13, 2010, 3:48 pm

This is nice but after i set everything up the right way it still wont let me login lol.

This Girl Is On Fire - November 13, 2010, 3:53 pm

This may have just killed all .NET HWID systems on sale. Awesome release though! :D

iTrollLuLz - November 13, 2010, 6:38 pm

How the hell do I use this for my vb.net Programs?

Velocity - November 13, 2010, 8:31 pm

(Nov 13, 2010 07:38 PM)iTrollLuLz Wrote: [\[CITE\]](#) How the hell do I use this for my vb.net Programs? I'm pretty sure this is for websites.

On another topic, TheOne I keep getting this error, of sorts: "cannot select DB"

Toxic Asshole - November 13, 2010, 9:04 pm

This has been out for a while and they use this for games such as warrock for hacks coded in C++.

Shell.NET - November 13, 2010, 9:38 pm

(Nov 13, 2010 07:38 PM)iTrollLuLz Wrote: [\[CITE\]](#) How the hell do I use this for my vb.net Programs? if you cant code this into your .NET program, quit coding.

codebreaker911 - November 13, 2010, 10:30 pm

Thanks for the nice code, but how can I connect this to with my vb.net program? More precisely, how can I create a secure connection from my vb.net program to the web database to check the user/pass?

Thanks

iTrollLuLz - November 13, 2010, 11:43 pm

(Nov 13, 2010 10:38 PM)Shell.NET Wrote: [\[CITE\]](#) if you cant code this into your .NET program, quit coding.

Fuck You, Your an asshole?

I NEED HELP! :O

SOMEONE HELP ME!!!! It WONT WORK :O

stratos8765 - November 13, 2010, 11:51 pm

Those script has many bugs :/

Hecker21 - November 13, 2010, 11:58 pm

Downloading this as soon as I get home.

Thanks op ;D

Ainsley - November 14, 2010, 12:25 am

:D

[img]http://innovatorsworldwide.com/ihosting/images/loll.jpg[/img]

My birthday lol

------_---_

Good Job bubby!! Just what i've been looking for!

Velocity - November 14, 2010, 1:24 am

(Nov 14, 2010 12:51 AM)stratos8765 Wrote: [\[CITE\]](#) Those script has many bugs :/
IKR??? It's gay SOO MANY BUGS :(

xCocaine - November 14, 2010, 1:29 am

Wow, NICE WORK! :D

I remember when i used this shit for my WarRock Hook _

The-One - November 14, 2010, 2:59 am

It does have some bugs, but I already said it wasn't finished. Its working on the way I wanted it to work (to check GUIDs).

Velocity - November 14, 2010, 7:55 am

I keep getting error and which file is the Visual Basic file?? :(

The-One - November 14, 2010, 8:14 am

(Nov 14, 2010 08:55 AM)kutzki Wrote: [\[CITE\]](#) I keep getting error and which file is the Visual Basic file?? :(

Please read the first post again.

The-Noob - November 14, 2010, 8:57 am

lol kutzki..

Yeah it is used in websites, and this is best used in C++ as well. some PHP knowledge would be handy when setting up one of these as well. If you don't set this up correctly people can crack this with ease!

The-One - November 14, 2010, 11:09 am

I forgot to say, If you create a new user he/she can't logon on the site. The option is there(Also bugged, thats why I left it out), but you need to change a few things in the login.php (Tip: Groups)

Goodluck!

Weakky. - November 16, 2010, 5:16 am

Idk how to implement this to my website ><... I have lot of error...

Where we must upload the sql file ? In the same folder of the php file ?

The-One - November 16, 2010, 6:45 am

(Nov 20, 2010 03:25 AM)SevX Wrote: [\[CITE\]](#) Awesome, will come in handy dude, thanks...

No problem man, thanks for replying!

iTrollLuLz - November 20, 2010, 1:42 pm

How the heck, do I use this in vb.net :(

The-One - November 20, 2010, 4:15 pm

(Nov 20, 2010 02:42 PM)iTrollLuLz Wrote: [\[CITE\]](#) How the heck, do I use this in vb.net :(Goto to `yoursite.com/guidcheck.php?=<guidhere(whichisindatabase)>` and it will return if its in the database or not. You should check the guidcheck.php file.

The-One - November 30, 2010, 6:08 am

Found the VB.net source! Link added!

Velocity - November 30, 2010, 6:12 am

YAY U FOUND THE SOURCE FILES!!! Hey btw you havent update this at all yet have u????

BravoTwoZero - November 30, 2010, 1:41 pm

Hey good work and about the - CRC (Prevention for running cracked .exe's) is this a function that calculates a sum of the executable like : SHA1, MD5... because when I search I didn't really recognize the concept in this project. And here there are no documentation about this matter.. and searched :(

nofear1999 - November 30, 2010, 4:09 pm

I'm going to stick with my Forum Login System & Auto Buy :3 It's almost complete.

DarkShadowz - December 1, 2010, 12:25 am

This barely has to do with the user's (more like program's) GUID at all.

```
Code Function makeGUID() As String
    Return System.Guid.NewGuid().ToString()
End Function
```

I was checking the source for fun and it never had to do with anything regarding making/using/storing GUID's.

Milopeach - December 1, 2010, 12:49 am

Thank you, This is quite nice. I might use this if i ever start a project that needs to be locked and "hack proof".

The-One - December 1, 2010, 4:36 am

(Dec 1, 2010 01:49 AM)milopeach Wrote: [\[CITE\]](#) Thank you, This is quite nice. I might use this if i ever start a project that needs to be locked and "hack proof".
No problem

(Dec 1, 2010 01:25 AM)DarkShadowz Wrote: [\[CITE\]](#) This barely has to do with the user's (more like program's) GUID at all.

3. Select ibf_member_converge
4. Go to: <http://md5encryption.com/>
5. Enter the password you want to use
6. Click Encrypt it!!
7. At the database, click the pencil
8. Change converge_pass_hash to the hash you just made

This part won't really work for me.

The-One - December 2, 2010, 8:14 am

8. Change converge_pass_hash to the hash you just made

This part won't really work for me.
You have to make a admin password.

You can find the encryption method @ login.php
Standard its:
Code \$password = md5(md5(\$salt) . md5(\$password));
So you have to encrypt your password 3 times. Then enter that one in your database.

Velocity - December 2, 2010, 8:33 am

I'm guessing u havent updated this at all... XD

This Girl Is On Fire - December 2, 2010, 8:37 am

This is a very insecure method of authentication. If someone bought the program, they just use a packet sniffer to catch the "accepted" string and now they can emulate the response to send that string. Meaning invalid logins would become valid. Incredibly insecure.

BravoTwoZero - December 2, 2010, 11:21 am

(Dec 2, 2010 09:37 AM)exprezzed Wrote: [\[CITE\]](#) This is a very insecure method of authentication. Incredibly insecure. So I'm just asking what would be the perfect system in your opinion whitout taking notice of obfuscation of the executable?
Just curios..

This Girl Is On Fire - December 2, 2010, 12:23 pm

No system is perfect and never will be. A good system has an everchanging "accepted" string. By randomizing the key and iv for a strong encryption algorithm. Meaning the encrypted text will never be the same.

BravoTwoZero - December 2, 2010, 12:25 pm

(Dec 2, 2010 01:23 PM)exprezzed Wrote: [\[CITE\]](#) No system is perfect and never will be. A good system has an everchanging "accepted" string. By randomizing the key and iv for a strong encryption algorithm. Meaning the encrypted text will never be the same. ie polymorphic encryption?

This Girl Is On Fire - December 2, 2010, 12:26 pm

Hmm, I gotta be careful how I word this. AFAIK that would be classed as polymorphic as the encryption produces a totally unique string each time (due to the random codekey and IV). However, I've seen some posts saying this is not classed as polymorphic, however AFAIK it is.

BravoTwoZero - December 2, 2010, 12:42 pm

Ok so good, good many thanks for your informative posts!! :D

iSmile - December 5, 2010, 4:49 am

Parse error: parse error in C:\wamp\www\settings.php on line 392

Anyone could help me? ;)

I didn't change anything in the file. Any clue's? (php newb here)

Wow, I couldn't imagine people still using this.

Okay, as 383 is the end of the file my guess it its one of the includes. Check connect.php, I think you left a ; or something.

Velocity - May 16, 2011, 6:15 pm

LOLZZZZ seeing as ppl are still using this.. u should UPDATE IT :P

Stenography - May 16, 2011, 7:25 pm

OMFG this is amazing !

Im gonna make a crackme and see hows people here handling with it ...

Very intresting.

Okay, PM'ed you. I found the files btw. Looks good :P.

Dr. Trollin - June 16, 2011, 1:12 pm

Where are the VB files? Look's great otherwise, thanks.

The-One - June 16, 2011, 2:14 pm

Being nice from time to time won't hurt you ?

Crash-Override - June 24, 2011, 6:23 am

Amazing release mate. I am surely going to implement this in my project. Also you deserve an award for this ;)

The-One - June 24, 2011, 6:25 am

By me I made on with laerning, you need lern to men.

?

Silent4Six - August 6, 2011, 10:28 am

if i Login come this erro:

```
Warning: mysql_connect() [function.mysql-connect]: Access denied for user  
'wwwarr_guidu'@'localhost' (using password: YES) in  
/data/multiserv/users/638842/projects/1566158/www/GuidTech/connect.php on line 52  
cannot connect
```

Tully - August 6, 2011, 5:50 pm

Never thought of this. Im new to coding but I like to think up ideas and play them through in my head and I have a solid idea in my head right now on a securing method. It uses a login to a forum using http webrequest and an invite system for registering. Still have to work out some bugs in the invite plugin PHP but after that it should be pretty secure. Once I do that Im going to release it as beta and then encrypt everything and release it again as a CrackMe.

Tell me what you think! :D

50GTB - August 7, 2011, 4:57 am

i keep getting invalid password :@

The-One - August 7, 2011, 5:13 am

Read the spoiler in my first post >.>

Spoiler ([Click to View](#))

There are two fixes, one:

Open up login.php, find the following line:

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5( md5( $salt ) . md5( $password ) );
```

replace it with:

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5($password);
```

now, you only have to encrypt it once(YOUR PASSWORD) then enter it in the database.

The second fix is way more secure, it uses hash>hash+salt.

You can just leave the

Code //Use IPB hashing algorithm to compare passwords

```
$password = md5( md5( $salt ) . md5( $password ) );
```

Now, I know people are having trouble with getting the hash.

I made a little php script who generates the hash

login.php:

```
Code Option:<form method="POST" action="login2.php">
```

```
<SELECT NAME="Actions" SIZE="1">
```

```
<OPTION VALUE="1">Original
```

```
<OPTION VALUE="2">Modified
```

```
</SELECT>
```

```
<br>Password: <br>
```

```
<input type="text" name="password">
```

```
<br>Salt(Leave blank if NOT needed):<br>
```

```
<input type="text" name="salt"> <br><br>
```

```
<input type="submit" value="Generate">
```

```
</form>
```

login2.php:

```
Code <?php
```

```
$LOLx = $_POST[Actions];
```

```
if ($LOLx == 1) {
```

```
    $LOL = md5($_POST['password']);
```

```
    echo $LOL;
```

```
    exit; }
```

```
if ($LOLx == 2) {
```

```
    $LOL2 = md5( md5( $_POST['salt'] ) . md5( $_POST['password'] ) );
```

```
    echo $LOL2;
```

```
    exit; }
```

```
?>
```

Now, the Original selection will just hash the password once, like you need in the first method. The Modified selection will do it like hash > hash & salt.

The Original one will not use the salt and the modified one will require a salt, make sure you enter the salt in the database.

?Cooldude? - August 8, 2011, 4:16 am

In what way is GUID protection better than HWID protection?

GerraT177 - August 8, 2011, 6:09 am

(Aug 8, 2011 04:16 AM)?Cooldude? Wrote: [\[CITE\]](#) In what way is GUID protection better than HWID protection?

The chance that the same GUID will appear on the same computers is MUCH smaller then HWID. Other than that, dunno.

hgdfhsdgdgdfh - August 8, 2011, 6:17 am

You can just fake the result value. Not very secure.
But nice release otherwise.

The-One - August 8, 2011, 7:24 am

(Aug 8, 2011 06:17 AM)0xDEADDEAD Wrote: [\[CITE\]](#) You can just fake the result value. Not very secure.

But nice release otherwise.

I know, It is much better secured in V2. This one is ported from the forum version + C++, because this is used from game hacks.

accountcanberemoved - August 8, 2011, 7:58 am

Guidtech is the same shit as HWID

The-One - August 8, 2011, 9:13 am

(Aug 8, 2011 07:58 AM)Byte Fuck Wrote: [\[CITE\]](#) Guidtech is the same shit as HWID

Not really, officially GUIDtech is made for forums and the programming-class was made in C++. In V1 I just used the forum files and deleted everything to make it a standalone version (no forum needed), in V2 I upgraded the layout and fixed a few security issues, basically this one is the same, but it was originally made for forums.

Ap?? - August 8, 2011, 12:35 pm

The thing is this is useful but then you get the odd guy who will crack the GUID out of your C++ application, Patch it and release it to the public, I haven't found a stable method of keeping those guys away. If i can found it i had made an application for the latest IPB where you had settings in ACP and everything. The-One ll pm you if i find it :P you might like it..

The-One - August 8, 2011, 2:51 pm

Cracking .NET is way easier then C++, also, on this forum lots of people are doing it do (cracking .net). That's why I rather choose C++ as programming language then .NET, the chance of it being cracked is way lower.

jojijijijo - October 13, 2011, 9:51 am

I have downloaded this and it looks very good so far, some minor bugs needs to be fixed but its all

good, I'm very interested in having your newer version, and I would greatly appreciate if you could PM me it, I will keep it private for my personal use.

Thanks again.

TECHNOHOLIX - *March 15, 2012, 7:03 am*

can someone reupload this including the vb files

The-One - *March 18, 2012, 5:34 am*

I do not have the files anymore, stop PMing me!

kintana - *May 16, 2013, 11:41 am*

link is dead. can someone upload this to a new link

lokpi - *May 16, 2013, 1:06 pm*
